The Aquatic Ape:

The Aquatic Ape Hypothesis Elaine Morgan, 2011-03-01 Why do humans differ from other primates What do those differences tell us about human evolution Elaine Morgan gives a revolutionary hypothesis that explains our anatomic anomalies why we walk on two legs why we are covered in fat why we can control our rate of breathing The answers point to one conclusion millions of years ago our ancestors were trapped in a semi aquatic environment In presenting her case Elaine Morgan forces scientists to question accepted theories of human evolution *The Aquatic Ape* Elaine Morgan, 1982

Aquatic Ape Hypothesis The Elaine Morgan, 2017-03 This thought provoking text presents the Aquatic Ape Theory with new information new questions and a wealth of documentary evidence It is the most persuasive closely argued case yet offered to explain the mystery of human origins The aquatic ape : a theory of human evolution Elaine Morgan, 1982

Were the First People Swimmers? Judy Kaul, 2013-11-28 Your child asks Where did we come from and you wish you had a scientific explanation of human evolution to answer the question Or you re grown up and you re still curious How did our species become so different from the other great apes or for that matter from other mammals More than a century and a half after Darwin s *On the Origin of Species* was published the mystery of the missing link is still unresolved Scientists agree on approximately when the split occurred between humans and our last common ancestors but not how *Were the First People Swimmers* introduces the reader to an elegant rigorous theory by Welsh writer Elaine Morgan based on a hypothesis by marine biologist Alister Hardy that our early Homo sapien ancestors evolved through natural selection in water The theory became known as the Aquatic Ape Theory or AAT Morgan wrote six books on human evolution and the theory *Were the First People Swimmers* guides you with elementary text and playful illustrations through empirical evidence that explains how the first humans could have started talking lost their ability to run on all four legs lost their fur and acquired subcutaneous fat Elaine Morgan provided ideas and feedback in the conception and planning of *Were the First People Swimmers* The book encourages observation of nature critical thinking and inter generational learning **The Aquatic Ape** Machteld

Roede, 1991 *The Waterside Ape* P. H. Rhys Evans, 2019 This book presents the latest evidence on the controversial Waterside Ape theory of human evolution what used to be known as the Aquatic Ape theory The traditional Savannah Ape theory that early hominid apes evolved on the grass plains of East Africa 6 7 million years ago from our quadruped ape ancestors by coming down from the trees on to the savannah and stood upright in order to see further has been accepted by archaeologists and anthropologists since before the time of Darwin based on geological and fossil evidence Recent scientific evidence largely discredits this hypothesis but mainstream teaching and public understanding is still based on traditional lines Key selling features Presents the latest evidence for a close association between waterside habitats and the origin of humans Reviews the savannah ape hypothesis for human origins Describes various anatomical adaptations that are associated with hypotheses of human evolution Offers explanations for unique human characteristics not seen in any other

Fifty Years After Alister Hardy - Waterside Hypotheses of Human Evolution Mario Vaneechoutte, Algis Kuliukas, Marc Verhaegen, 2011 The book starts from the observation that humans are very different from the other primates Why are we naked Why do we speak Why do we walk upright Fifty years ago in 1960 marine biologist Sir Alister Hardy tried to answer this when he announced his so called aquatic hypothesis human ancestors did not live in dry savannahs as traditional anthropology assumes but have adapted to live at the edge between land and water gathering both terrestrial and aquatic foods This eBook is an up to date collection of the views of the most important protagonists of this long neglected theory of humankind *The Aquatic Ape* Luc Collard, 2023-02-15 How can a high level French swimmer premeditate his disqualification in the semi finals of the Paris Games 2024 And why does this exclusion from the sport shed light on Paleontology the science of fossils On the shores of the Red Sea Dave unearths fragments of a 7 million year old hominoid skeleton His stubbornness in defending the hypothesis of the aquatic ape ancestor of Man will in turn disqualify him from scientific research lead him to risk his life at a depth of over 100 meters in the North Sea take him to Russia to the source of the forbidden experiment on water babies before returning to Paris to steal a skull from the Museum of Evolution An unexpected piece of evidence will suddenly turn his life upside down and reveal one of the greatest discoveries on the origins of humanity This novel that follows the Epic of an incorrigible outsider is based on real facts Any resemblance to existing or passed people is purely coincidental *The Naked Darwinist* Elaine Morgan, 2008 Recently a weblog under the sub heading of pseudoscience posed an interesting question If the Aquatic Ape theory explains so much why do the majority of anthropologists not subscribe to it This book presents some of the answers to that question Back cover The Saltwater Wilderness Glenn S. time to end the narrow vision of excluding African Indian Ocean seashores from five million years of hominin evolution G. James Royce,2005-02-01 In this uniquely spiritual work of science fiction author G James Royce reveals the motivation for Deos to create our universe initiate organic life and shape the evolution of the human race **The Truth about Language** Michael C. Corballis,2024-05-31 Evolutionary science has long viewed language as basically a fortunate accident a crossing of wires that happened to be extraordinarily useful setting humans apart from other animals and onto a trajectory that would see their brains and the products of those brains become increasingly complex But as Michael C Corballis shows in The Truth about Language it s time to reconsider those assumptions Language he argues is not the product of some big bang 60 000 years ago but rather the result of a typically slow process of evolution with roots in elements of grammatical language found much farther back in our evolutionary history Language Corballis explains evolved as a way to share thoughts and crucially for human development to connect our own mental time travel our imagining of events and people that are not right in front of us to that of other people We share that ability with other animals but it was the development of language that made it powerful it led to our ability to imagine other perspectives to imagine ourselves in the minds of others a development that by easing social interaction proved to be an extraordinary evolutionary advantage Even as his thesis challenges such giants as Chomsky and Stephen Jay Gould Corballis writes accessibly and wittily filling his account with unforgettable anecdotes and fascinating historical examples The result is a book that s perfect both for deep engagement and as brilliant fodder for that lightest of all forms of language cocktail party chatter **Encyclopedia of Anthropology** H. James Birx,2006 Focuses on physical social and applied athropology archaeology linguistics and symbolic communication Topics include hominid evolution primate behaviour genetics ancient civilizations cross cultural studies and social theories Studies in Language Origins Jan Wind,Edward G. Pulleyblank,Bernhard H. Bichakjian,1989-01-01 The question of language origin has fascinated people for years Traditionally humanists like linguists and philosophers attempted to solve it with limited success In the last decades however the sciences have begun to study the same question seemingly with more success This book is the result of the activities of a group of scholars members of the Language Origins Society who approach the problem not only from the viewpoint of linguistics but also from that of anatomy physiology social sciences physical anthropology paleoanthropology paleontology comparative zoology general biology ethology evolutionary biology and psychology The volume thus clearly reflects the interdisciplinary approach the Language Origins Society is advocating Since this book is the first of a series meant for the general scholar it attempts to avoid specialist jargon Hence it is equally useful for student courses in linguistics social sciences communication science ethology evolutionary biology and speech therapy An End To Murder Colin Wilson,Damon Wilson,2015-09-24 Creatively and intellectually there is no other species that has ever come close to equalling humanity s achievements but nor is any other species as suicidally prone to internecine conflict We are the only species on the planet whose ingrained habit of conflict constitutes the chief threat to our own survival Human history can be seen as a

catalogue of cold hearted murders mindless blood feuds appalling massacres and devastating wars but with developments in forensic science and modern psychology and with raised education levels throughout the world might it soon be possible to reign in humanity's homicidal habits Falling violent crime statistics in every part of the world seem to indicate that something along those lines might indeed be happening Colin and Damon Wilson who between them have been covering the field of criminology for over fifty years offer an analysis of the overall spectrum of human violence They consider whether human beings are in reality as cruel and violent as is generally believed and they explore the possibility that humankind is on the verge of a fundamental change that we are about to become truly civilised As well as offering an overview of violence throughout our history from the first hominids to the twenty first century touching on key moments of change and also indicating where things have not changed since the Stone Age they explore the latest psychological forensic and social attempts to understand and curb modern human violence To begin with they examine questions such as Were the first humans cannibalistic Did the birth of civilisation also lead to the invention of war and slavery Priests and kings brought social stability but were they also the instigators of the first mass murders Is it in fact wealth that is the ultimate weapon They look at slavery and ancient Roman sadism but also the possibility that our own distaste for pain and cruelty is no more than a social construct They show how the humanitarian ideas of the great religious innovators all too quickly became distorted by organised religious structures The book ranges widely from fifteenth century Baron Gilles de Rais Bluebeard the first known and possibly most prolific serial killer in history to Victorian domestic murder and the invention of psychiatry and Sherlock Holmes and the invention of forensic science from the fifteenth century Taiping Rebellion in China in which up to 36 million died to the First and Second World Wars and more recent genocides and instances of ethnic cleansing and contemporary terrorism They conclude by assessing the very real possibility that the internet and the greater freedom of information it has brought is leading gradually to a profoundly more civilised world than at any time in the past

The Wrong Ape for Early Human Origins M. Kay Martin, 2023-04-11 The Wrong Ape for Early Human Origins examines ways in which the chimpanzee referential model has exerted a primary influence on evolutionary theory dominating portraits of proto and early human social life and in the broader sense of human nature itself Evidence on which this model is based is revisited along with new cross disciplinary findings that point to alternative scenarios for hominin phylogeny ecology and subsistence primeval kinship cognition and language and the respective roles played by aggression and cooperation as evolutionary drivers Recent advances in phylogenetics evolutionary biology and new additions to the fossil record are rendering linear monotypic models obsolete Contemporary theories on species divergence and change over time are shifting attention from ancient genotypes to factors that influence gene expression and from innate prescriptive behaviors to epigenesis and the capacity for behavioral plasticity This broader platform has the potential to fundamentally revise current notions about the basic nature phenotypic traits and lifeways of ancestral humans It informs a different profile of our progenitors one that reflects greater ecological

bandwidth reliance on creative niche construction and hominin agency in the structuring of ancient reproductive and social groups

The Waterside Ape Peter H. Rhys Evans, 2019-07-24

Why are humans so fond of water? Why is our skin colour so variable? Why aren't we hairy like our close ape relatives? A savannah scenario of human evolution has been widely accepted primarily due to fossil evidence and fossils do not offer insight into these questions. Other alternative evolutionary scenarios might exist, but these models have been rejected. This book explores a controversial idea that human evolution was intimately associated with watery habitats as much or more than typical savannahs. Written from a medical point of view, the author presents evidence supporting a credible alternative explanation for how humans diverged from our primate ancestors. Anatomical and physiological evidence offer insight into hairlessness, different coloured skin, subcutaneous fat, large brains, a marine type kidney, a unique heat regulation system, and speech. This evidence suggests that humans may well have evolved not just as savannah mammals as is generally believed, but with more affinity for aquatic habitats: rivers, streams, lakes, and coasts.

Key Features

- Presents the evidence for a close association between riparian habitats and the origin of humans.
- Reviews the savannah ape hypothesis for human origins.
- Describes various anatomical adaptations that are associated with hypotheses of human evolution.
- Explores characteristics from the head and neck such as skull and sinus structures, the larynx, and ear structures and functions.
- Corroborates a novel scenario for the origin of human kind, a counterpoint to the textbooks or other books which deal with human evolution.

I think readers will see it as a clearly written, well-supported discussion of an alternative perspective on human origins.

Kathlyn Stewart, Canadian Museum of Nature, Ottawa

There is a pressing need to expand discussions of human evolution to include non anthropocentric narratives that use comparative data. Dr Rhys Evans' specific expertise and experience with the human head, neck, ears, throat, mouth, and sinuses provides him with a distinct perspective from which to approach the subject of human evolution. Moreover, his understanding of non anthropocentric views of human evolution, water-based models, allow him to apply a biological approach to the subject missing in more traditional savannah-based models.
