The Architecture Of The Well Tempered Environment:

The Architecture of the Well-Tempered Environment Reyner Banham, 2013-10-22 The Architecture of the Well Tempered Environment presents the fundamental aspects of the architecture of the well tempered environment This book considers what architects had taken to be the proper use and exploitation of mechanical environmental controls and shows how this had manifested itself in the design of their buildings Organized into 12 chapters this book begins with an overview of the history of the mechanization of environmental management This text then explains the accumulation of capital goods and equipment needed to produce a moderate level of civilized culture in pre technological societies which requires that building materials be treated as if valuable and permanent Other chapters consider that it is necessary not only to create habitable environments but to conserve them This book discusses as well the kind of technology of environment in the 19th century The final chapter deals with the liberation of architecture from the ballast of structure This book is a valuable resource for architects

Architecture of the Well-Tempered Environment Reyner Banham, 1984 Reyner Banham was a pioneer in arguing that technology human needs and environmental concerns must be considered an integral part of architecture No historian before him had so systematically explored the impact of environmental engineering on the design of buildings and on the minds of architects In this revision of his classic work Banham has added considerable new material on the use of energy particularly solar energy in human environments Included in the new material are discussions of Indian pueblos and solar architecture the Centre Pompidou and other high tech buildings and the environmental wisdom of many current architectural vernaculars

[The Soundscape of Modernity](#) Emily Thompson, 2004-09-17 A vibrant history of acoustical technology and aural culture in early twentieth century America In this history of aural culture in early twentieth century America Emily Thompson charts dramatic transformations in what people heard and how they listened What they heard was a new kind of sound that was the product of modern technology They listened as newly critical consumers of aural commodities By examining the technologies that produced this sound as well as the culture that enthusiastically consumed it Thompson recovers a lost dimension of the Machine Age and deepens our understanding of the experience of change that characterized the era Reverberation equations sound meters microphones and acoustical tiles were deployed in places as varied as Boston s Symphony Hall New York s office skyscrapers and the soundstages of Hollywood The control provided by

these technologies however was applied in ways that denied the particularity of place and the diverse spaces of modern America began to sound alike as a universal new sound predominated Although this sound clear direct efficient and nonreverberant had little to say about the physical spaces in which it was produced it speaks volumes about the culture that created it By listening to it Thompson constructs a compelling new account of the experience of modernity in America

Weather Architecture Jonathan Hill,2013-06-17 Weather Architecture further extends Jonathan Hill s investigation of authorship by recognising the creativity of the weather At a time when environmental awareness is of growing relevance the overriding aim is to understand a history of architecture as a history of weather and thus to consider the weather as an architectural author that affects design construction and use in a creative dialogue with other authors such as the architect and user Environmental discussions in architecture tend to focus on the practical or the poetic but here they are considered together Rather than investigate architecture s relations to the weather in isolation they are integrated into a wider discussion of cultural and social influences on architecture The analysis of weather s effects on the design and experience of specific buildings and gardens is interwoven with a historical survey of changing attitudes to the weather in the arts sciences and society leading to a critical re evaluation of contemporary responses to climate change

Frank Lloyd Wright and

the Path to Beauty Kenneth Dahlin,2025-06-19 This book connects Frank Lloyd Wright s organic theory with his pursuit of beauty presenting a path for the recovery of beauty in architecture While there has been a resurgence of interest in beauty in architecture recently the modern uglification of our built environment means there is no clear pathway to define or find it In this study Wright s organic theory provides such a path to reclaim this beauty Tracing the evolution of Wright s concept of organic architecture author Kenneth Dahlin explores Wright s middle way a route mediating between traditional historical precedents and today s novelty driven architectural culture often detached from deeper notions of harmony and beauty Chapters explore Wright s romanticist roots in the late 19th and early 20th centuries including the House Beautiful movement the centrality of Japanese aesthetics and his concept of the integrated whole Two chapters on Aristotle and Hegel ground Wright s pursuit of beauty in philosophical aesthetics setting the stage for a concluding synthesis that unites the various strands of Wright s theory into a model theory of organic architecture for the future This book will be of interest to Frank Lloyd Wright scholars and enthusiasts as well as postgraduate and advanced undergraduate architecture students

The Sustainability Curriculum Cedric Cullingford,John Blewitt,2013 The links between education and sustainable development are deepening although subject to much controversy and debate The success of the sustainability discourse depends both on the pedagogic and research functions of higher education Similarly for higher education itself to remain

relevant and engaged it faces pressure not only to integrate the insights and lessons drawn from the perspective of sustainable development but also to be responsive to scrutiny of its own practices in relation to sustainability Among professionals in higher education sustainable development has its supporters and detractors It is embraced by some individuals and departments while being perceived by others as a threat to the coherence of particular disciplines Although it is not currently an academic discipline in its own right increasing public and professional familiarity with the term and the increasing urgency of global calls for the implementation of sustainable development mean that this is rapidly changing This volume analyses the impact of the concepts and practices of sustainability and sustainable development on various academic disciplines institutional practices fields of study and methods of enquiry The contributors drawn from a wide range of disciplines perspectives educational levels and institutional contexts examine the purpose of the modern university and the nature of sustainable education which includes exploring links to social movements for sustainability projects curriculum change culture and biodiversity values relating to gender equality and global responsibility and case studies on the transformation or otherwise of some specific disciplines

Reality Modeled After Images Michael Young, 2021-08-30

Design Technics Zeynep Çelik Alexander, John May, 2020-01-21
Leading scholars historicize and theorize technology's role in architectural design Although the question of technics pervades the contemporary discipline of architecture there are few critical analyses on the topic Design Technics fills this gap arguing that the technical dimension of design has often been flattened into the broader celebratory rhetoric of innovation Bringing together leading scholars in architectural and design history the volume's contributors situate these tools on a broader epistemological and chronological canvas The essays here construct histories some panoramic and others unfolding around a specific episode of seven techniques regularly used by the designer in the architectural studio today rendering modeling scanning equipping specifying positioning and repeating Starting with observations about the epistemological changes that have unfolded in the discipline in recent decades but seeking to offer a more expansive meaning for technics the volume casts new light on concepts such as form experience and image that have played central roles in historical architectural discourses Among the

questions addressed How was the concept of form immanent in practices of scanning since the late nineteenth century What was the historical relationship between rendering and experience in Enlightenment discourses How did practices of specifying reconfigure the distinction between intellectual and manual labor What kind of rationality is inherent in the designer's constant clicking of the mouse in front of her screen In addressing these and other questions this engaging and timely collection thereby proposes technics as a site for historical and philosophical reflection not only for those engaged in architectural design but also for any scholar working in the humanities today Contributors Lucia Allais Edward Eigen Orit Halpern John Harwood Matthew C Hunter and Michael Osman

Circular Architecture Francesca Zanotto,2022-02-28 Circular economy opens a new domain for architectural design where architecture is focused on its production and disposal cycles and the process is intended as the final outcome of the project The circular paradigm is the product of the political discourse and critical attitude which are globally questioning the use of natural resources and the origins of goods As a model of production and consumption aiming to recover the retained value in waste and optimize resource utilization the circular framework is one of the most radical thinking patterns of contemporary age developing specific cultural and social attitudes Architecture's Model
