**The Armstrong Error** Charles F. DeLoach, 1971-01-01      *Explanatory Optimism about the Hard Problem of Consciousness* Josh Weisberg, 2023-08-25 Explanatory Optimism about the Hard Problem of Consciousness argues that despite the worries of explanatory pessimists consciousness can be fully explained in easy scientific terms The widespread intuition that consciousness poses a hard problem is plausibly based on how consciousness appears to us in first person access The book offers a debunking argument to undercut the justificatory link between the first person appearances and our hard problem intuitions The key step in the debunking argument involves the development and defense of an empirical model of first person access Automated Compression Theory ACT ACT holds that first person access to consciousness is accomplished by automated accessing of compressed sensory information Because of the distorting nature of this compressed access it seems to subjects that consciousness possesses exceptional properties properties leading to the hard problem even though no such properties are present If there are no exceptional properties to explain then an explanation in easy terms can fully account for conscious experience The book presents a range of empirical evidence for ACT and concludes that the burden of proof is now on the pessimists to show why we shouldn't be optimistic about explaining consciousness

**Exposure Assessment in Occupational and Environmental Epidemiology** Mark J. Nieuwenhuijsen, 2003-08-07 Set against a background of growing public media and political concern about occupational and environmental health issues and a scientific need to better understand and explain the effects of pollutants on human health this book is a unique resource Contributions from an expert panel of international practitioners provide a comprehensive reference on the state of the art methods and applications in the field of occupational and environmental pollution and the adverse health effects particularly the exposure assessment in epidemiological studies Risks associated with occupational and environmental exposure are generally small but the exposed population and hence the population attributable risk may be large To detect small risk the exposure assessment needs to be very refined Exposure assessment is the study of the distribution and determinants of potentially hazardous agents and includes the estimation of intensity duration and frequency of exposure the variation in these indices and their determinants The aim of this book is to develop an understanding and knowledge of exposure assessment methods and their application to substantive issues in occupational and environmental epidemiology The emphasis is on methodological principles and good practice It is focused on exposure assessment in both occupational and environmental

epidemiology since there are many similarities but also some interesting differences The book outlines the basic principles of exposure assessment and examines the current status and research questions in the exposure assessment of occupational and environmental epidemiological studies of allergens particulate matter chlorination disinfection by products agricultural pesticides and radiofrequencies The book will be of interest to all concerned with exposure assessment and epidemiology It will be a valuable source for undergraduate and postgraduate courses in exposure assessment occupational hygiene environmental science epidemiology toxicology biostatistics occupational and environmental health health risk assessment and related disciplines and a useful resource of reference for policy makers and regulators *Ohio Law Reporter and Weekly Law Bulletin* ,1914 *The Ohio Law Reporter* ,1907 **Microstructure modeling and crystal plasticity**
