Scripting Cultures Mark Burry, 2013-01-30 Scripting Cultures Architectural Design and Programming With scripting computer programming becomes integral to the digital design process It provides unique opportunities for innovation enabling the designer to customise the software around their own predilections and modes of working It liberates the designer by automating many routine aspects and repetitive activities of the design process freeing up the designer to spend more time on design thinking Software that is modified through scripting offers a range of speculations that are not possible using the software only as the manufacturers intended it to be used There are also significant economic benefits to automating routines and coupling them with emerging digital fabrication technologies as time is saved at the front end and new file to factory protocols can be taken advantage of Most significantly perhaps scripting as a computing program overlay enables the tool user designer to become the new tool maker software engineer Though

scripting is not new to design it is only recently that it has started to be regarded as integral to the designer's skill set rather than a technical speciality Many designers are now aware of its potential but remain hesitant This book treats scripting not only as a technical challenge requiring clear description guidance and training but also and more crucially answers the question as to why designers should script in the first place and what the cultural and theoretical implications are This book Investigates the application of scripting for productivity experimentation and design speculation Offers detailed exploration of the scripting of Gaudí's final realised design for the Sagrada Família leading to file to factory digital fabrication Features projects and commentary from over 30 contemporary scripting leaders including Evan Douglas Marc Fornes Sawako Kaijima Achim Menges Neri Oxman Casey Reas and Hugh Whitehead of Foster Partners **ACADIA 2000** Mark J.
