**The Art of Distributed Applications** John R. Corbin,2012-12-06 Powerful networked workstations are adding a new dimension to the world of computing Programmers are challenged to write applications that exploit the speed and parallelism of such distributed systems programs that take advantage of the networking and communication features of high speed workstations John Corbin a senior engineer in Sun s networking group bases his approach on RPC Remote Procedure Call a technique for programming communication processes in UNIX environments A professional reference book as well as a textbook on RPC programming techniques The Art of Distributed Applications Programming Techniques for Remote Procedure Call is for the working programmer who needs to explore the possibilities of designing distributed networked applications under UNIX The book can also be recommended as a supplemental text in a distributed systems course providing the basis for lab assignments Advances in Software Science and Technology Tsutomu Kamimura,2014-12-03 This serial is a translation of the original works within the Japan Society of Software Science and Technology A key source of information for computer scientists in the U S the serial explores the major areas of research in software and technology in Japan These volumes are intended to promote worldwide exchange of ideas among professionals This volume includes original research contributions in such areas as Augmented Language Logic ALL distributed C language Smalltalk 80 and TAMPOPO an evolutionary learning machine based on the principles of Realtime Minimum Skyline Detection Third Generation Distributed Computing Environments Amjad Umar,2004 Umar provides a collection of powerful services to support the e business andm business initiatives of today and tomorrow Computer Books **The 1994 Goddard Conference on Space Applications of Artificial Intelligence** Carl F. Hostetter,1994 UNIX System V Network Programming Stephen A. Rago,1993 Steve Rago offers valuable insights into the kernel level features of SVR4 not covered elsewhere I think readers will especially appreciate the coverage of STREAMS TLI and SLIP W Richard Stevens author of UNIX Network Programming Advanced Programming in the UNIX Environment TCP IP Illustrated Volume 1 and TCP IP Illustrated Volume 2 Finally with UNIX R System V Network Programming an authoritative reference is available for programmers and system architects interested in building networked and distributed applications for UNIX System V Even if you currently use a different version of the UNIX system such as the latest release of 4 3BSD or SunOS this book is valuable to you because it is centered around UNIX System V Release 4 the version of the UNIX system that unified many of the divergent UNIX implementations For those professionals new to networking and UNIX system programming two introductory chapters are provided The author then presents the programming interfaces most important to building communication software in System V including STREAMS the Transport Layer Interface library Sockets and Remote Procedure Calls So that your designs are not limited to user level the author also explains how to write kernel level communication software including STREAMS drivers modules and multiplexors Many examples are provided including an Ethernet driver and a

transport level multiplexing driver In the final chapter the author brings the material from previous chapters together presenting the design of a SLIP communication package 0201563185B04062001      *Component-Based Software Testing with UML* Hans-Gerhard Gross,2005 Component based software development regards software construction in terms of conventional engineering disciplines where the assembly of systems from readily available prefabricated parts is the norm Because both component based systems themselves and the stakeholders in component based development projects are different from traditional software systems component based testing also needs to deviate from traditional software testing approaches Gross first describes the specific challenges related to component based testing like the lack of internal knowledge of a component or the usage of a component in diverse contexts He argues that only built in contract testing a test organization for component based applications founded on building test artifacts directly into components can prevent catastrophic failures like the one that caused the now famous ARIANE 5 crash in 1996 Since building testing into components has implications for component development built in contract testing is integrated with and made to complement a model driven development method Here UML models are used to derive the testing architecture for an application the testing interfaces and the component testers The method also provides a process and guidelines for modeling and developing these artifacts This book is the first comprehensive treatment of the intricacies of testing component based software systems With its strong modeling background it appeals to researchers and graduate students specializing in component based software engineering Professionals architecting and developing component based systems will profit from the UML based methodology and the implementation hints based on the XUnit and JUnit frameworks      Environmental Software Systems Ralf Denzer,Gerald Schimak,D.W. Russell,2013-06-05 Due to increasing practical needs software support of environmental protection and research tasks is growing in importance and scope Software systems help to monitor basic data to maintain and process relevant environmental information to analyze gathered information and to carry out decision processes which often have to take into account complex alternatives with various side effects Therefore software is an important tool for the environmental domain When the first software systems in the environmental domain grew 10 to 15 years ago users and developers were not really aware of the complexity these systems are carrying with themselves complexity with respect to entities tasks and procedures I guess nobody may have figured out at that time that the environmental domain would ask for solutions which information science would not be able to provide and in several cases can not provide until today Therefore environmental informatics as we call it today is also an important domain of computer science itself because practical solutions need to deal with very complex interdisciplinary distributed integrated sometimes badly defined user centered decision processes I doubt somebody will state that we are already capable of building such integrated systems for end users for reasonable cost on a broad range The development of the first scientific community for environmental informatics started around 1985 in Germany becoming a technical committee and working group of the German Computer Society in 1987

**A System Administrator's Guide to Sun Workstations** George Becker, Kathy Slattery, 2012-12-06 This Guide to Sun Administration is a reference manual written by Sun administrators for Sun administrators The book is not intended to be a complete guide to UNIX Systems Administration instead it will concentrate on the special issues that are particular to the Sun environment It will take you through the basic steps necessary to install and maintain a network of Sun computers Along the way helpful ideas will be given concerning NFS YP backup and restore procedures as well as many useful installation tips that can make a system administrator's job less painful Specifically SunGS 4.0 through 4.0.3 will be studied however many of the ideas and concepts presented are generic enough to be used on any version of SunGS This book is not intended to be a basic introduction to SunGS It is assumed that the reader will have at least a year of experience supporting UNIX Book Overview The first chapter gives a description of the system types that will be discussed throughout the book An understanding of all of the system types is needed to comprehend the rest of the book Chapter 2 provides the information necessary to install a workstation The format utility and the steps involved in the suninstall process are covered in detail Ideas and concepts about partitioning are included in this chapter YP is the topic of the third chapter A specific description of each YP map and each YP command is presented along with some tips about ways to best utilize this package in your environment

*The SPARC Technical Papers* Ben J. Catanzaro, 2012-12-06 With the SPARC Scalable Processor Architecture architecture and system software as the underlying foundation Sun Microsystems is delivering a new model of computing easy workgroup computing to enhance the way people work automating processes across groups departments and teams locally and globally Sun and a large and growing number of companies in the computer industry have embarked on a new approach to meet the needs of computer users and system developers in the 1990s Originated by Sun the approach targets users who need a range of compatible computer systems with a variety of application software and want the option to buy those systems from a choice of vendors The approach also meets the needs of system developers to be part of a broad growing market of compatible systems and software developers who need to design products quickly and cost effectively The SPARC approach ensures that computer systems can be easy to use for all classes of users and members of the workgroup end users system administrators and software developers For the end user the SPARC technologies facilitate system set up and the daily use of various applications For the system administrator supporting the computer installation setting up and monitoring the network are easier For the software developer there are advanced development tools and support Furthermore the features of the SPARC hardware and software technologies ensure that SPARC systems and applications play an important role in the years to come
