Extraterrestrials in the Catholic Imagination Jennifer Rosato, Alan Vincelette, 2021-02-10 What do scientists know about the possibility of life outside our solar system How does Catholic science ction imagine such worlds What are the implications for Catholic thought This collection brings together leading scientists philosophers theologians and science fiction authors in the Catholic tradition to examine these issues In the first section Christian scientists detail the latest scientific findings regarding the possibility of life on exoplanets The second part brings together leading Catholic science fiction authors who describe how alien life forms have been prevalent in the Catholic imagination from the Middle Ages right up to the present day In the final section Catholic philosophers and theologians examine the implications of discovering intelligent life elsewhere in the universe Rather than worrying that the discovery of intelligent extraterrestrials might threaten the dignity of humans or their existence the contributors here maintain that such creatures should be welcomed as fellow creatures of God and potential subjects of divine salvation

Coevolutionary Economics: The

Economy, Society and the Environment John Gowdy, 2013-04-18 The subject of this volume is the human economy and its coevolutionary relationship with the natural world This relationship is examined in three broad types of societies hunter gatherers agriculturalists and modern market economies A growing body of scientific evidence has made it clear that the current human impact on the environment is far above the level that can be maintained without causing profound changes in the biophysical world to which we belong The new fields of ecological economics and evolutionary economics can help us understand the relationship between the economy society and the environment and may help us to formulate effective policies to manage these changes
