Woodrow W. Clark II

The Energy-environment Connection:

The Energy-Environment Connection Jack Hollander, 1992-08 While the enormous benefits of energy use have always been obvious only recently has it become apparent that its costs also are enormous The ever escalating scale of human activity has brought civilization to the point where energy and environment problems affect not only today's global ecosystem and its present inhabitants but also generations yet unborn Society faces critical and unprecedented decisions involving energy supply use and regulation decisions that are inextricably linked with issues of social equity economics and environmental ethics This book brings together leading scientists and policy analysts from around the world to provide the latest thinking on all aspects of the vital connection between energy and the environment The complex questions explored touch on nearly every issue relating to the environment and to human aspirations for improving our quality of life The book is organized around three themes the environmental impact of energy source supplies fossil fuels nuclear power biomass environmental and economic benefits of energy efficiency and policy and ethical issues including environmental ethics and Third World economic development Its goal is to help citizens and leaders find a way to balance the costs and benefits of energy within the context of global sustainability *Energy, Environment and Development* José Goldemberg, Oswaldo Lucon, 2010 First Published in 2009 Routledge is an imprint of Taylor Francis an informa company

Energy Investments and the Environment Corazon M. Siddayao, Lisa A. Griffin, 1993-01-01 This volume shows how to develop new energy sources in ways that are less damaging to the environment than previous practices have been Contributors to the compilation discuss how developing countries can identify the most important environmental issues for their energy investments measure the costs and benefits including environmental considerations of sustainable energy development incorporate macroeconomic and institutional issues into energy planning The editors highlight the institutional barriers to energy development planning that takes into consideration the environmental effects They outline typical environmental impacts of renewable energy systems and provide an overview of applicable technologies The report also discusses environmental policy in the production and consumption of oil and gas with a review of pollution standards and control And one section explores issues concerning greenhouse gases such as how to apply controls fairly These technical materials are a product of the program on energy policy and planning of the World Bank's Economic Development Institute This volume will help policymakers and planners identify environmental issues in energy investments

The Real Environmental Crisis Jack Hollander, 2003-04-02 Drawing a completely new road map toward a sustainable future Jack M Hollander contends that our most critical environmental problem is global poverty His balanced authoritative and lucid book challenges widely held beliefs that economic development and affluence pose a major threat to the world's environment and resources Pointing to the great strides that have been made toward improving and protecting the environment in the affluent democracies Hollander makes the case that the essential prerequisite for sustainability is a global transition from poverty to affluence

coupled with a transition to freedom and democracy The Real Environmental Crisis takes a close look at the major environment and resource issues population growth climate change agriculture and food supply our fisheries forests and fossil fuels water and air quality and solar and nuclear power In each case Hollander finds compelling evidence that economic development and technological advances can relieve such problems as food shortages deforestation air pollution and land degradation and provide clean water adequate energy supplies and improved public health The book also tackles issues such as global warming genetically modified foods automobile and transportation technologies and the highly significant Endangered Species Act which Hollander asserts never would have been legislated in a poor country whose citizens struggle just to survive Hollander asks us to look beyond the media's doomsday rhetoric about the state of the environment for much of it is simply not true and to commit much more of our resources where they will do the most good to lifting the world's population out of poverty
