The Eclipsing Stars:

Eclipsing Binary Stars Josef Kallrath, Eugene F. Milone, 2013-11-11 Have you ever stopped at a construction project on the way to your office and the day's astrophysics Remember the other onlookers folks just enjoying the spectacle as we all do in following developments away from our areas of active work We are excited and thrilled when the Hubble Space Telescope discovers an Einstein Cross when the marvelous pulsars enter our lives and when computer scientists put a little box on our desk that outperforms yesterday's giant machines We are free to make use of such achievements and we respect the imagination and discipline needed to bring them about just as onlookers respect the abilities and planning needed to create a building they may later use After all each of us contributes in our own areas as best we can In addition to the serious onlookers there will be passers by who take only a casual look at the site They may use the building later but have little or no interest in its construction and give no thought to the resources needed to bring it to completion Upon arriving at work those persons write astronomy and astrophysics books at various levels in which they must say something about close binary stars Usually a page or two will do and the emphasis is on the MLR mass luminosity radius data obtained only from binaries

The Eclipsing Stars Cay Vaughn, 1992-05-01 **Eclipsing Binary Stars** Panagiotis G. Niarchos, Odes'kyi derzhavnyi universytet imeni I.I. Mechnykova, 2001 The importance of studying Eclipsing Binary Stars for the determination of fundamental stellar data is sketched The eclipsing binaries originally classified phenomenologically are now understood on the basis of much firmer physics and the improved understanding has led to a morphological basis of classification The main light curve models developed since Russell's era are presented along with the respective programs for analysis Kallrath Milone 1999 These models are based on the geometric effects due to eclipses and on physical proximity effects between the components Significant progress was made in the early 1970s when models and programs were developed to compute synthetic light and velocity curves directly Such models and programs were based on spherical stars ellipsoidal geometry and on Roche geometry During the last 25 years the analysis of photometric and spectroscopic data of eclipsing binaries has been performed by means of synthetic light curve programs based on Roche geometry The synthetic light curve programs based on physical models have contributed to our understanding of physical processes in stars and have been used to solve several important astrophysical problems A desirable feature of a light curve program is the ability to incorporate additional astrophysics There is a continuing need to improve the model physics as we become more aware of the observational properties of stars **Non-stable Stars** International Astronomical Union, 1957 **Nuclear Science Abstracts**, 1976

Handbuch der Astrophysik Gustav Eberhard, 1928 Literature 1974, Part 1 S. Böhme, U. Esser, W. Fricke, U. Güntzel-Lingner, F. Henn, D. Krahn, H. Scholl, G. Zech, 2013-03-14 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution

adopted at the 14th General Assembly in 1970 Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user Volume II contains literature published in 1974 and received before August 1974 some older literature which was received late and which is not recorded in earlier volumes is also included Beginning with this volume some minor changes of our classification scheme have been made We acknowledge with thanks contributions to this volume by Dr J Bouška who surveyed journals and publications in the Czech language and supplied us with abstracts in English and by the Commonwealth Scientific and Industrial Research Organization CSIRO Sydney for providing titles and abstracts of papers on radio astronomy

Observing Variable Stars Gerry A. Good, 2012-12-06 Observing variable stars is one of the major contributions amateur astronomers make to science There are 36 000 variable stars listed in the General Catalogue of Variable Stars so it is clearly impossible for the limited number of professional observatories to target even the majority of them That's where amateur astronomers come in thousands of them turning their telescopes to the sky every night Variable star observing is the most popular of real science activities for amateurs and Gerry Good's book provides everything needed The first part of the book provides a highly detailed account of the various classes of variable star with examples illustrations and physical descriptions The second section covers practical aspects of observing everything from preparation and planning through observing techniques to data management and reduction *Binary Stars as Critical Tools and Tests in Contemporary Astrophysics (IAU S240)* International Astronomical Union. Symposium, 2007-08-27 IAU Symposium 240 held in conjunction with the 26th General Assembly of the International Astronomical Union highlights the latest advances in the field of binary and multiple stars and was the first major meeting in recent years bringing together members of both the wide and close binary communities Topics discussed ranged from common proper motion pairs and other fragile binaries to contact binaries and star brown dwarf planet systems exploring the numerous interests common to all binary star researchers Highlights included talks on observing binaries using high angular and spectral resolution techniques the impacts of new and planned large scale surveys recent models for binary evolution new methods for analyzing cataclysmic pairs and disentangling spectra surveys of extragalactic eclipsing binaries Doppler tomography and imaging and binaries as probes of the Galaxy's chemical and dynamical evolution This volume will be an important reference source for binary star researchers for many years to come
