Axioms of Euclidean Geometry

Section I – Euclidean Geometry II (The Quadrilateral)

General Quadrilateral Diagrams  F and G are midpoints of AC and BD $K_{AC} + K_{BD} = K_{AB} + K_{CD}$ $K = \frac{1}{2}AC \cdot BD \sin \angle AOB$ $AB^2 + BC^2 + CD^2 + DA^2 = AC^2 + BD^2 + 4FG^2$	General Quadrilateral Midpoints  If $\frac{AH}{HD} = \frac{EG}{GC} = \frac{CF}{FB} = \frac{BE}{EA} = n$ Then $\frac{K_{mid}}{K_{area}} = \frac{n^2 + 1}{(n + 1)^2}$
Circumscribed Quadrilateral  $AB + CD = BC + AD = s$, $K_{area} = rs$ If Quadrilateral is also cyclic, then $K = \sqrt{s(s-AB)(s-BC)(s-CD)(s-DA)}$	Cyclic Quadrilateral  $A + C = B + D = 180^\circ$ $K_{area} = \sqrt{(s-AB)(s-BC)(s-CD)(s-DA)}$ $BC \times AD + AC \times BD = BE \times AC$ $AC \{ BC \times CD + (DA \times AB) \} = BD \{ AB \times BC + CD \times DA \}$
Parallelogram  $2BC^2 + 2DA^2 = BD^2 + AC^2$	Rectangle  For all point P, $PA^2 + PC^2 = PB^2 + PD^2$
Three Pole Problem  If $a \geq b \geq c$, then $\frac{1}{a} + \frac{1}{b} + \frac{1}{c}$	Quadrilateral with $\perp$ Diagonals  $AC \perp BD \Rightarrow K = \frac{1}{2}AC \cdot BD$ $AB^2 + CD^2 = BC^2 + DA^2$
Ptolemy's Theorem: In any Quadrilateral, $BD \cdot AC \leq BC \cdot AD + AB \cdot CD$, with equality holding iff Quadrilateral is cyclic.

The Elements Of Non Euclidean Geometry:

Elements of Non-Euclidean Geometry ... Duncan M'Laren Young Sommerville,1919 The Elements of Non-Euclidean Geometry Julian Lowell Coolidge,1909 **The Elements of Non-Euclidean Geometry** Julian Lowell Coolidge,1909

The Elements of Non-euclidean Geometry D. M. Y. Sommerville,1958 *The Elements of Non-Euclidean Geometry* Julian Lowell Coolidge, PhD,2020-06-04 In this book Dr Coolidge explains non Euclidean geometry which consists of two geometries based on axioms closely related to those specifying Euclidean geometry As Euclidean geometry lies at the intersection of metric geometry and affine geometry non Euclidean geometry arises when either the metric requirement is relaxed or the parallel postulate is replaced with an alternative one In the latter case one obtains hyperbolic geometry and elliptic geometry the traditional non Euclidean geometries When the metric requirement is relaxed then there are affine planes associated with the planar algebras which give rise to kinematic geometries that have also been called non Euclidean geometry The essential difference between the metric geometries is the nature of parallel lines Euclid s fifth postulate the parallel postulate is equivalent to Playfair s postulate which states that within a two dimensional plane for any given line l and a point A which is not on l there is exactly one line through A that does not intersect l In hyperbolic geometry by contrast there are infinitely many lines through A not intersecting l while in elliptic geometry any line through A intersects l Another way to describe the differences between these geometries is to consider two straight lines indefinitely extended in a two dimensional plane that are both perpendicular to a third line In Euclidean geometry the lines remain at a constant distance from each other meaning that a line drawn perpendicular to one line at any point will intersect the other line and the length of the line segment joining the points of intersection remains constant and are known as parallels In hyperbolic geometry they curve away from each other increasing in distance as one moves further from the points of intersection with the common perpendicular these lines are often called ultraparallels In elliptic geometry the lines curve toward each other and intersect *ELEMENTS OF NON-EUCLIDEAN GEOMETRY* JULIAN LOWELL. COOLIDGE,2018 **Elements of Non-Euclidean Geometry** ,1919 *The Elements of Non-Euclidean Geometry*, by D. M. Y. Sommerville Duncan M'Laren Young Sommerville,2004-01-01 *The Elements of Non-Euclidean Geometry* Julian Lowell Coolidge,2015-06-24 Excerpt from *The Elements of Non Euclidean Geometry* The heroic age of non euclidean geometry is passed It is long since the days when Lobachevsky timidly referred to his system as an imaginary geometry and the new subject appeared as a dangerous lapse from the orthodox doctrine of Euclid The attempt to prove the parallel axiom by means of the other usual assumptions is now seldom undertaken and those who do undertake it are considered in the class with circle squarers and searchers for perpetual motion sad by products of the creative activity of modern science In this as in all other changes there is subject both for rejoicing and regret It is a satisfaction to a writer on non euclidean geometry that he may proceed at once to his subject without feeling any need to justify himself or at least any more need than any other who adds to our supply of books

On the other hand he will miss the stimulus that comes to one who feels that he is bringing out something entirely new and strange The subject of non euclidean geometry is to the mathematician quite as well established as any other branch of mathematical science and in fact it may lay claim to a decidedly more solid basis than some branches such as the theory of assemblages or the analysis situs Recent books dealing with non euclidean geometry fall naturally into two classes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
