Skin Immune System Sis:

Skin Immune System (SIS) Jan D. Bos, 1997-04-10 Immunodermatology is a field covering the majority of skin diseases including the most prevalent ones in the general population. The Second Edition of Skin Immune System SIS discusses immune mediated skin diseases and disease groups in which the SIS plays a role. It covers major findings in immunophysiology and immunopathology that have occurred since the introduction of the First Edition in 1990. As the subtitle indicates, the Second Edition adds a new emphasis on cutaneous immunology and also includes new information on immune based therapeutic interventions and methods such as phototherapy and the immunological therapy of skin cancer. The book contains Part I with introductory chapters, Part II with descriptions of the cellular elements, and Part III which describes the humoral and molecular components of SIS. Part IV follows to integrate the facts described in Parts II and III into concepts of pathophysiology. It contains a number of concepts entitled response patterns that describe how the constitutional elements of SIS work together. New in this edition are the descriptions of immunodermatological diseases individually described in Part V. Part VI is also all new and summarizes principles of immunotherapy.

Clinical and Basic Immunodermatology Anthony Gaspari, Stephen K. Tying, 2008-11-05 Dermatologists are being asked to understand the pathophysiology of a number of immune mediated skin diseases. In addition, a number of new products have appeared on the market during the past decade which requires an understanding of the mechanisms of action of these drugs. Dermatologists however have no easily understood book to which they can refer to regarding the disease or the drug.

Skin Immune System (SIS), 2005 Top scientific authors contribute their expertise and put a wealth of complex information into perspective in Skin Immune System Cutaneous Immunology Clinical Immunodermatology Third Edition. This edition provides an overview of the skin immune system SIS, a totally updated section on immunodermatological diseases, and six new chapters. Part I presents historical and comparative information on

immunodermatology and includes a new chapter on the immunogenetics of inflammatory skin disease while Part II covers the cellular elements of SIS and highlights newly defined functional subclasses

The Skin in Systemic Autoimmune Diseases Piercarlo Sarzi-Puttini, 2006-01-26 This book represents the state of the art in the field of skin and autoimmune rheumatic diseases It covers systematically a growing and multifaceted topic which is of great importance in the clinical practice It also serves as a sharp educational tool as each chapter provides summaries and specific highlights to key references cited into the text The pathophysiological link between skin involvement and autoimmunity has been explained in detail as well as diagnostic and therapeutic aspects This book yields an impressive body of well ordered information which summarizes the experience of a selected panel of distinguished physicians and scientists actively involved in the field of skin immunology and systemic autoimmunity Written by a respected panel of distinguished physician scientists actively involved in the field of skin immunology and systemic autoimmunity Box summaries at the end of each chapter highlight important topics Up to date basic knowledge as well as modern approach to diagnosis and therapy

Handbook of Mouse Mutations with Skin and Hair Abnormalities John P. Sundberg, 2020-08-26 Handbook of Mouse Mutations with Skin and Hair Abnormalities presents 48 mouse mutations that are all available to the biomedical community Many of the mouse mutations with dermatological diseases are reviewed and illustrated in detail This popular reference book gives you a single source to use when determining which mouse mutation will best serve your needs as a biomedical tool for sophisticated research projects The book also includes an overview of domestic animal genodermatoses to provide alternatives to mouse models that do not exist or to complement those that do A detailed section written by renowned experts compares the biology of human and mouse skin and skin diseases in the areas of development and the use of animal models mammalian genetics keratin biochemistry epidermal and hair follicle cycles and kinetics cytokines and growth factors keratinocyte culture systems cutaneous carcinogenesis cutaneous immune system and skin changes associated with mutations of the endocrine system

Neuroimmunology of the Skin Richard D. Granstein, Thomas A. Luger, 2009-02-08 Much anecdotal information has suggested an influence of psychology and the nervous system on immunity within the skin and the expression of inflammatory skin disorders Recent years have seen an explosion of knowledge providing a scientific basis for important regulatory interactions between the nervous system the endocrine system and the immune system within the skin The results of recent investigations have important implications not only for an understanding of cutaneous immunity but also for the development of novel treatments for diseases involving abnormal inflammation or immune reactivity within the skin This book provides a comprehensive and interdisciplinary review of the molecular biology cell biology biochemistry and clinical aspects of nervous system immune system interactions within the skin It includes contributions from leading world experts in these areas The contents are relevant to both investigators and clinicians interested in the skin its functions and its disorders

Skin Cancer after Organ Transplantation Eggert Stockfleth, Claas Ulrich, 2009-05-05 Organ transplantation has been

performed for almost 40 years with steadily increasing success regarding long time survival of the graft as well as quality of life for the patient. However, graft tolerance only can be achieved via induction and maintenance of an impaired immunological surveillance. An increase of skin cancers as a consequence of the lowered cellular immunoresponse seems to parallel the overall increased long time survival rate of organ transplant recipients. Against the background of chronic immunosuppression, known risk factors like the amount of sun exposure prior and post transplantation, oncogenic viruses as well as the genetic background and place of residence, latitude are strongly related with the increased skin cancer incidence. The increasing incidence of non-melanoma skin cancer paralleling a prolonged survival of patients after organ transplantation represents a significant reason for morbidity and long-term morbidity in organ transplant recipients worldwide. The incidence of non-melanoma skin cancer in liver, kidney and heart transplant recipients varies from 1.5 to 22 % to 24 % and 6 to 34 % after 5 years post-transplant. Ultraviolet radiation as well as immunosuppressive therapy are crucial risk factors regarding the induction and progression of skin cancer. Ultraviolet radiation is related to the induction of DNA damage as well as interference with Langerhans cell antigen presentation and a Th1/Th2 shift induced via a release of IL-10. Whereas the overall duration of immunosuppression and the cumulative dosage applied are relevant parameters in the evaluation of an increased tumor risk, individual differences between specific immunosuppressive agents remain unclear. The workup of genetic as well as other unclear phenomenon like the reverse BCC/SCC ratio might shed some further light into the genesis and immunology of the non-melanoma skin cancer in general.

The Skin Immune Response to Infectious Agents Fatima Conceição-Silva, Fernanda Nazaré Morgado, Fabienne Tacchini-Cottier, Roberta Olmo Pinheiro, 2021-10-14

Immunology and Drug Therapy of Allergic Skin Diseases Carla A.F.M. Bruijnzeel-Koomen, E.F. Knol, 2012-12-06. Allergic skin diseases belong to the most common dermatoses. This book deals with fundamental in particular immunological aspects as well as clinical symptoms and therapeutic strategies of the allergic skin diseases. Cells involved in the pathomechanisms of allergic skin disease are described in individual chapters. The allergic skin diseases which will be discussed are atopic dermatitis being the chronic inflammatory skin disease with the highest prevalence, allergic contact dermatitis with special focus on contact dermatitis from cosmetics being the most frequent cause of contact dermatitis and occupational contact dermatitis. The broad etiology of urticaria and the value of several therapeutic strategies will be explained. The chapter on drug allergy will deal with the variety of symptoms and the difficulties concerning in vitro and in vivo diagnosis. The book is of great interest to clinicians working in the field of dermatology, allergology, pediatrics and even general practitioners.
