Predisposing Conditions for Acute Ischemic Syndromes T.v. Arnim,A. Maseri,2013-04-17 Predisposing conditions for acute ischemic syndromes contains the proceedings of a conference held in Garmisch Partenkirchen West Germany October 14 and 15 1988 The editors of this volume are most grateful to the authors for their effort to provide manuscripts before the meeting to the sponsor Bayer AG for their generous support and to the publishers for the efficient collaboration all of which have made the appearance of this book possible All authors contributed their manuscripts in advance and they are combined with an edited version of the discussions to allow rapid publication In coronary heart disease the prognosis for patients is largely determined by the occurrence of irreversible ischemic damage to the myocardium Irreversible events are certainly preceded by a destabilization of a former stable situation This destabilization may occur with increasing symptomatology or without apparent warning signs to patient and physician it may occur over a longer time period or very suddenly The statement however holds true that no patient has ever died from stable angina pectoris Thus if the prognosis for patients with ischemic heart disease is to be improved the focus has to be set on recognition and treatment of unstable ischemic syndromes It was the goal of the conference to gather scientists and clinicians from different fields of research to get an up to date view of the different aspects of unstable ischemic syndromes and to foster interdisciplinary discussions

Contemporary

Internal Medicine Juan M. Bowen, Ernest L. Mazzaferri, 2012-12-06 Read with two objectives first to acquaint yourself with the current knowledge of a subject and the steps by which it has been reached and secondly and more important read to understand and analyze your cases William Osler The Student Life What follows is a collection of cases or more aptly the stories of our patients and friends who have been seen at The Ohio State University Hospitals where our faculty have provided their care and about whom this volume is written Today many fear that our patients are being moved from center stage while we are being distracted by the technology of medicine This volume was written with patients in mind The idea is that the most intriguing questions and the most rewarding answers begin and end at the bedside This is a story of our patients told by expert clinicians and spiced with commentary along the way This volume in no way attempts to be comprehensive Instead it is like the practice of medicine scattered somewhat disjointed while at the same time intensely personal and focused upon whatever problem the patient brings to us The discussions are not so much about disease entities

as they are about patients with problem The two are uniquely different For instance when the physician suspects hepatitis not every imaginable cause can be actively investigated Instead tests and procedures are discriminately chosen a part of medicine that is still more art than science
