## **Skin Tight The Sensibility Of The Flesh:**

**Instruments of Embodiment** Eric Mullis, 2022-12-16 *Instruments of Embodiment* draws on fashion theory and the philosophy of embodiment to investigate costuming in contemporary dance. It weaves together philosophical theory and artistic practice by closely analyzing acclaimed works by contemporary choreographers considering interviews with costume designers and engaging in practice as research. Topics discussed include the historical evolution of contemporary dance costuming, Merce Cunningham's innovative collaborations with Robert Rauschenberg and costumes used in Ohad Naharin's *Virus* 2001 and in a ground-breaking Butoh solo by Tatsumi Hijikata. The relationship between dance costuming and high fashion, wearable computing and the role costume plays in dance reconstruction are also discussed and along the way an anarchist materialism is articulated which takes an egalitarian view of artistic collaboration and holds that experimental costume designs facilitate new forms of embodied experience and ways of seeing the body. This book will be of great interest to students and scholars working in performance philosophy, philosophy of embodiment, dance and performance studies and fashion theory.

Sustainable Horticultural Systems Dilip Nandwani, 2014-10-14 Sustainable horticulture is gaining increasing attention in the field of agriculture as demand for the food production rises to the world community. Sustainable horticultural systems are based on ecological principles to farm, optimize pest and disease management approaches through environmentally friendly and renewable strategies in production agriculture. It is a discipline that addresses current issues such as food security, water pollution, soil health, pest control and biodiversity depletion. Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, entomology, ecology, chemistry and food sciences. Sustainable horticulture interprets methods and processes in the farming system to the global level. For that, horticulturists use the system approach that involves studying components and interactions of a whole system to address scientific, economic and social issues. In that respect, sustainable horticulture is not a classical narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable horticulture treats problem sources.
