The Student Supercomputer Challenge Guide ASC Community, 2018-03-26 This guide provides a comprehensive overview of High Performance Computing HPC to equip students with a full skill set including cluster setup network selection and a background of supercomputing competitions It covers the system architecture evaluating approaches and other practical supercomputing techniques As the

world's largest supercomputing hackathon the ASC Student Supercomputer Challenge has attracted a growing number of new talent to supercomputing and has greatly promoted communications in the global HPC community Enclosed in this book readers will also find how to analyze and optimize supercomputing systems and applications in real science and engineering cases

Simulating Science Ramón Alvarado, 2023-08-23 This book provides a philosophical framework to understand computer simulations as scientific instruments This is in sharp contrast to existing philosophical approaches on the subject which have historically understood computer simulations as either formal abstractions or as broadly construed empirical practices In order to make its case the volume contains a thorough examination of conventional philosophical approaches as well as their respective limitations Yet also unlike other accounts of computer simulations from the perspective of the philosophy of science this book incorporates insights from the philosophy of technology and the history of science Hence the book offers philosophers of science technologists and other researchers interested in the topic a thorough overview of the philosophical issues regarding the design development and deployment of computer simulations in science and science based policy making

End-User Training for Sci-Tech Databases Ellis Mount, 2019-12-06 This book first published in 1990 analyses how to train end users to search with both natural language and controlled vocabularies in the sciences describes a planning assessment for implementing end user searching in a sci tech organization examines how the scientists at a major industrial research organization have begun to do more online searching with the encouragement of the information center and explores the proactive role that medical libraries have taken in training health care professionals to search MEDLINE

Scientific Computing on Supercomputers J.T. Devreese, P.E. Van Camp, 2012-12-06 The International Workshops on The Use of Supercomputers in Theoretical Science have become a tradition at the University of Antwerp Belgium The first one took place in 1984 This volume combines the proceedings of the second workshop December 12 1985 of the third June 16 1987 and of the fourth June 9 1988 The principal aim of the International Workshops is to present the state of the art in scientific high speed computation Indeed during the past ten years computational science has become a third methodology with merits equal to the theoretical and experimental sciences Regrettably access to supercomputers remains limited for academic researchers Nonetheless supercomputers have become a major tool for scientists in a wide variety of scientific fields and they lead to a realistic solution of problems that could not be solved a decade ago It is a pleasure to thank the Belgian National Science Foundation NFWO FNRS for the sponsoring of all the workshops These workshops are organized in the framework of the Third Cycle Vectorization Parallel Processing and Supercomputers which is also funded by the NFWO FNRS The other sponsor I want to thank is the University of Antwerp where the workshops took place The University of Antwerp UIA together with the NFWO FNRS are also the main sponsors of the ALPHA project which gives the scientists of Belgium the opportunity to obtain an easy supercomputer connection

Applications,1986 **Supercomputers in Theoretical and Experimental** International Workshop on the Use of Supercomputers,1985 **Supercomputational Science** R.G. Evans,2012-12-06 In contemporary research the supercomputer now ranks along with radio telescopes particle accelerators and the other apparatus of big science as an expensive resource which is nevertheless essential for state of the art research Supercomputers are usually provided as shared central facilities However unlike telescopes and accelerators they are find a wide range of applications which extends across a broad spectrum of research activity The difference in performance between a good and a bad computer program on a traditional serial computer may be a factor of two or three but on a contemporary supercomputer it can easily be a factor of one hundred or even more Furthermore this factor is likely to increase with future generations of machines In keeping with the large capital and recurrent costs of these machines it is appropriate to devote effort to training and familiarization so that supercomputers are employed to best effect This volume records the lectures delivered at a Summer School held at The Cosensers House in Abingdon which was an attempt to disseminate research methods in the different areas in which supercomputers are used It is hoped that the publication of the lectures in this form will enable the experiences and achievements of supercomputer users to be shared with a larger audience We thank all the lecturers and participants for making the Summer School an enjoyable and profitable experience Finally we thank the Science and Engineering Research Council and The Computer Board for supporting the Summer School **Super Computers** V.
