Resch, Andreas Kaminski, Petra Gehring, 2017-04-07 The new book series The Science and Art of Simulation SAS addresses computer simulations as a scientific activity and engineering artistry in the sense of a techn The first volume is devoted to three topics 1 The Art of Exploring Computer Simulations Philosophy began devoting attention to computer simulations at a relatively early stage Since then the unquestioned point of view has been that computer simulation is a new scientific method the philosophy of simulation is therefore part of the philosophy of science The first section of this volume discusses this implicit unchallenged assumption by addressing from different perspectives the question of how to explore and how not to explore research on computer simulations Scientists discuss what is still lacking or considered problematic while philosophers draft new directions for research and both examine the art of exploring computer simulations 2 The Art of Understanding Computer Simulations The results of computer simulations are integrated into both political and social decisions It is implicitly assumed that the more detailed and consequently more realistic a computer simulation is the more useful it will be in decision making However this idea is by no means justified Different types of computer simulations have to be differentiated which in turn requires the specific skill of understanding computer simulation results The articles in this section examine the capabilities and limits of simulation results in political and social contexts exploring the art of understanding computer simulation results 3 The Art of Knowing through Computer Simulations The advent of computer simulation in today's scientific practices challenges the order of science What kind of knowledge is gained through computer simulations is the key question in this section Computer simulations are often compared to experiments or to arguments and the transformation of our traditional

scientific notions might be more challenging than expected these Ideas are put forward in the third section to conceptualize the art of knowing through computer simulations

Science At Century's End Martin Carrier, Laura Ruetsche, Gerald J. Massey, 2014-08-09 To most laypersons and scientists science and progress appear to go hand in hand yet philosophers and historians of science have long questioned the inevitability of this pairing As we take leave of a century acclaimed for scientific advances and progress Science at Century's End the eighth volume of the Pittsburgh Konstanz Series in the Philosophy and History of Science takes the reader to the heart of this important matter Subtitled Philosophical Questions on the Progress and Limits of Science this timely volume contains twenty penetrating essays by prominent philosophers and historians who explore and debate the limits of scientific inquiry and their presumed consequences for science in the 21st century

Defining Values for Research and Technology William T. Greenough, Philip J. McConaughay, Jay P. Kesan, 2007 Since the end of the Cold War federal funding for research at American universities has sharply decreased while changes in federal policy have combined with the emergence of new high technology fields to make universities an attractive partner to private industry In thirteen insightful and wide ranging essays Defining Values for Research and Technology examines the modern research university in the throes of this transition While acknowledging the challenges of increased corporate funding its contributors argue that university industry partnerships have the potential to both benefit industrial expansion and enrich academic life

The Systemic Image Inge Hinterwaldner, 2023-10-31 A new conceptualization of the relationship between the systemic and the iconic in real time simulations that distinguishes among four levels of forming Computer simulations conceive objects and situations dynamically in their changes and progressions In The Systemic Image Inge Hinterwaldner considers not only the technical components of dynamic computer simulations but also the sensory aspects of the realization Examining the optic the acoustic the tactile and the sensorimotor impressions that interactive real time simulations provide she finds that iconicity plays a dominant yet unexpected role Based on this and close readings of a series of example works Hinterwaldner offers a new conceptualization of the relationship between systemic configuration and the iconic aspects in these calculated

complexes Hinterwaldner discusses specifications of sensorialization necessary to make the simulation dynamic perceivable Interweaving iconicity with simulation she explores the expressive possibilities that can be achieved under the condition of continuously calculated explicit changes She distinguishes among four levels of forming the systems perspective as a process and schema that establishes the most general framework of simulations the mathematical model which marks off the boundaries of the simulation s actualization the iconization and its orientation toward the user and interaction design necessary for the full unfolding of the simulation The user makes manifest what is initially latent Viewing the simulation as an interface Hinterwaldner argues that not only does the sensorially designed aspect of the simulation seduce the user but the user also makes an impact on the simulation on the dynamic and perhaps on the iconization although not on the perspectivation The influence is reciprocal

give higher priority to the research on the science and technology S T roadmap for priority areas in China s modernization process What is the purpose And why is it Is it a must I think those are substantial and significant questions to start things forward Significance of the Research on China s S T Roadmap to 2050 We are aware that the National Mid and Long term S T Plan to 2020 has already been formed after two years hard work by a panel of over 2000 experts and scholars brought together from all over China chaired by Premier Wen Jiabao This clearly shows that China has already had its S T blueprint to 2020 Ten why did CAS conduct this research on China s S T roadmap to 2050 In the summer of 2007 when CAS was working out its future strategic priorities for S T development it realized that some issues such as energy must be addressed with a long term view As a matter of fact some strategic researches have been conducted over the last 15 years on energy but mainly on how to best use of coal how to best exploit both domestic and international oil and gas resources and how to develop nuclear energy in a discreet way Renewable energy was of course included but only as a supplementary energy
