

# The superconducting Flux Qubit

Coherent time evolution between two quantum states was observed.

Flux qubit consists of 3 Josephson junctions arranged in a superconducting loop.

Two states carrying opposite persistent currents are used to represent  $|0\rangle$  and  $|1\rangle$ .

External flux near half  $\Phi_0 = h/2e$  is applied.

A SQUID is attached directly.

MW line provides microwave current bursts inducing oscillating magnetic fields.

Current line provides the measuring pulse and voltage line allows the readout of the switching pulse.
