**Symmetry in Geometry and Analysis, Volume 2** Michael Pevzner, Hideko Sekiguchi, 2025-02-10 Symmetry in Geometry and Analysis is a Festschrift honoring Toshiyuki Kobayashi. The three volumes feature 35 selected contributions from invited speakers of twin conferences held in June 2022 in Reims France and in September 2022 in Tokyo Japan. These contributions highlight the profound impact of Prof Kobayashi's pioneering ideas, groundbreaking discoveries, and significant achievements in the development of analytic representation theory, noncommutative harmonic analysis, and the geometry of discontinuous groups beyond the Riemannian context, among other areas over the past four decades. This second volume of the Festschrift contains original articles on analytic methods in representation theory of reductive Lie groups and related topics. Contributions are by Salem Ben Saïd, Valentina Casarino, Paolo Ciatti, Jean Louis Clerc, Jan Frahm, Joachim Hilgert, Toshihisa Kubo, Khalid Koufany, Quentin Labriet, Karl Hermann Neeb, Yury Neretin, Gestur Laffson, Bent Rørded, Toshio Oshima, Birgit Speh, Jorge Vargas, and Clemens Weiske.

**The Abdus Salam Memorial Meeting** J. Ellis, Tom Kibble, Faheem Hussain, George Thompson, Miguel Angel Virasoro, 1999-02-25 The Abdus Salam Memorial Meeting was held from the 19th to the 22nd of November 1997 on the first anniversary of the death of Prof Abdus Salam, Nobel laureate and Founder Director of the International Centre for Theoretical Physics. It was an opportunity for many of his colleagues and students to pay homage to him. This invaluable volume comprising the papers presented at the meeting reflects the long-lasting passion of Prof Salam for the theory of the fundamental forces. Most of the contributions are concerned with recent developments in the theory of superstrings, including duality, D-branes, and related topics.

**Superstrings: The First 15 Years Of Superstring Theory (Reprints + Commentary - In 2 Volumes)** John H Schwarz, 1985-09-01 The discovery by Green and Schwarz in 1984 that ten-dimensional superstring theory is anomaly-free and finite only if the Yang-Mills gauge group is  $SO(32)$  or  $E_8 \times E_8$  has made the phenomenological possibilities of superstrings evident. This has resulted in a sudden surge of interest in superstrings unification. Since this fast-developing field is new to almost all theoretical physicists, this collection of basic pre-1985 references should be very valuable. These two volumes contain over 1000 pages of reprints plus some introductory comments by J. Schwarz.

Supergravities in Diverse Dimensions Abdus Salam, Ergin Sezgin, 1989 This book is a collection of reprints on the structure of Poincaré-anti-de Sitter and conformal supergravity theories in one to eleven dimensions, their anomalies, and compactification. Each chapter contains introductory comments and an extensive list of references.

Handbook of Quantum Gravity Cosimo Bambi, Leonardo Modesto, Ilya Shapiro, 2024-12-03 The search for a theory of quantum gravity is one of the most important and fascinating problems in modern theoretical physics. While we do not have yet a complete theory of quantum gravity, significant advancements have been done in the past decades. In this handbook, every section is dedicated to a specific approach towards a theory of quantum gravity and is edited by the leading experts in the field. This book represents both a valuable resource for graduate students and an important reference for researchers in

*in Geometry and Lie Algebras from Supergravity* Pietro Giuseppe Frè,2018-02-24 This book aims to provide an overview of several topics in advanced differential geometry and Lie group theory all of them stemming from mathematical problems in supersymmetric physical theories It presents a mathematical illustration of the main development in geometry and symmetry theory that occurred under the fertilizing influence of supersymmetry supergravity The contents are mainly of mathematical

nature but each topic is introduced by historical information and enriched with motivations from high energy physics which help the reader in getting a deeper comprehension of the subject

**Gravity, a Geometrical Course** Pietro Giuseppe Frè, 2012-10-24 Gravity a Geometrical Course presents general relativity GR in a systematic and exhaustive way covering three aspects that are homogenized into a single texture i the mathematical geometrical foundations exposed in a self consistent contemporary formalism ii the main physical astrophysical and cosmological applications updated to the issues of contemporary research and observations with glimpses on supergravity and superstring theory iii the historical development of scientific ideas underlying both the birth of general relativity and its subsequent evolution The book is divided in two volumes Volume Two is covers black holes cosmology and an introduction to supergravity The aim of this volume is two fold It completes the presentation of GR and it introduces the reader to theory of gravitation beyond GR which is supergravity Starting with a short history of the black hole concept the book covers the Kruskal extension of the Schwarzschild metric the causal structures of Lorentzian manifolds Penrose diagrams and a detailed analysis of the Kerr Newman metric An extensive historical account of the development of modern cosmology is followed by a detailed presentation of its mathematical structure including non isotropic cosmologies and billiards de Sitter space and inflationary scenarios perturbation theory and anisotropies of the Cosmic Microwave Background The last three chapters deal with the mathematical and conceptual foundations of supergravity in the frame of free differential algebras Branes are presented both as classical solutions of the bulk theory and as world volume gauge theories with particular emphasis on the geometrical interpretation of kappa supersymmetry The rich bestiary of special geometries underlying supergravity lagrangians is presented followed by a chapter providing glances on the equally rich collection of special solutions of supergravity Pietro Fr is Professor of Theoretical Physics at the University of Torino Italy and is currently serving as Scientific Counsellor of the Italian Embassy in Moscow His scientific passion lies in supergravity and all allied topics since the inception of the field in 1976 He was professor at SISSA worked in the USA and at CERN He has taught General Relativity for 15 years He has previously two scientific monographs Supergravity and Superstrings and The N 2 Wonderland He is also the author of a popular science book on cosmology and two novels in Italian
