Introduction to Hypersonic Flow G. G. Chernyi, 2013-10-22 Introduction to Hypersonic Flow has been made available to the English speaking reader because of its usefulness for those individuals desirous of obtaining an introduction to the subject Written by an internationally acknowledged expert in the field of hypersonic flow the book makes available heretofore unpublished Soviet work as well as published work little known outside the Soviet Union The author has however made every effort to include where appropriate Western references for the work he discusses Starting with a general introductory chapter on hypersonic aerodynamics and aerodynamic problems the remainder of the book concentrates on the inviscid perfect fluid aspects of hypersonic flow with emphasis on the fundamental concepts and rational methods of calculation The book is directed to students of aerodynamics and gas dynamics as well as to scientists and engineers interested in problems of hypersonic flight The level of approach is such that it should prove particularly useful as an undergraduate and introductory graduate text *NASA Technical Note* ,1970

Theory of Nonlinear Acoustics in Fluids B.O. Enflo, C.M. Hedberg, 2006-04-11 The aim of the present book is to present theoretical nonlinear acoustics with equal stress on physical and mathematical foundations We have attempted explicit and detailed accounting for the physical phenomena treated in the book as well as their modelling and the formulation and solution of the mathematical models The nonlinear acoustic phenomena described in the book are chosen to give physically interesting illustrations of the mathematical theory As active researchers in the mathematical theory of nonlinear acoustics we have found that there is a need for a coherent account of this theory from a unified point of view covering both the phenomena studied and mathematical techniques developed in the last few decades The most ambitious existing book on the subject of theoretical nonlinear acoustics is *Theoretical Foundations of Nonlinear Acoustics* by O V Rudenko and S I Soluyan Plenum New York 1977 This book contains a variety of applications mainly described by Burgers equation or its generalizations Still adhering to the subject scribed in the title of the book of Rudenko and Soluyan we attempt to include applications and techniques developed after the appearance of or not included in this book Examples of such applications are resonators shockwaves from supersonic projectiles and travelling of multifrequency waves Examples of such techniques are derivation of exact solutions of Burgers equation travelling wave solutions of Burgers equation in non planar geometries and analytical techniques for the nonlinear acoustic beam KZK equation
