first full length study of the cattle tick eradication program in the United States offers a new perspective on the fate of the yeomanry in the twentieth century South during a period when state and federal governments were both increasing and centralizing their authority As Claire Strom relates the power struggles that complicated efforts to wipe out the Boophilus tick she explains the motivations and concerns of each group involved including large and small scale cattle farmers scientists and officials at all levels of government In the remote rural South such as the piney woods of south Georgia and north Florida resistance to mandatory treatment of cattle was unusually strong and sometimes violent Cattle often ranged free and their owners raised them mostly for local use rather than faraway markets Cattle farmers in such areas shows Strom perceived a double threat in tick eradication mandates In addition to their added costs eradication schemes with their top down imposition of government expertise were anathema to the yeomanry's notions of liberty Strom contextualizes her southern focus within the national scale of the cattle industry discussing for instance the contentious place of cattle drives in American agricultural history Because Mexico was the primary source of potential tick reinfestation Strom examines the political and environmental history of the Rio Grande giving the book a transnational perspective Debates about the political and economic culture of small farmers have tended to focus on earlier periods in American history Here Strom shows that pockets of yeoman culture survived into the twentieth century and that these communities had the power to block if only temporarily the expansion of the American state

**Plagues and Epidemics** D. Ann Herring, Alan C. Swedlund, 2020-06-15 Until recently plagues were thought to belong in the ancient past Now there are deep worries about global pandemics This book presents views from anthropology about this much publicized and complex problem The authors take us to places where epidemics are erupting waning or gone and to other places where they have not yet arrived but where a frightening story line is already in place They explore public health bureaucracies and political arenas where the power lies to make decisions about what is and is not an epidemic They look back into global history to uncover disease trends and look ahead to a future of expanding plagues within the context of climate change The chapters are written from a range of perspectives from the science of modeling epidemics to the social science of understanding them Patterns emerge when people are engulfed by diseases labeled as epidemics but which have the hallmarks of plague There are cycles of shame and blame stigma isolation of the sick fear of contagion and end of the world scenarios Plague it would seem is still among us

*The Chisholm Trail* James E. Sherow, 2018-09-27 One hundred fifty years ago the McCoy brothers of Springfield Illinois bet their fortunes on Abilene Kansas then just a slapdash way station Instead of an endless horizon of prairie grasses they saw a bustling outlet for hundreds of thousands of Texas Longhorns coming up the Chisholm Trail and the youngest brother Joseph saw how a middleman could become wealthy in the process This is the story of how that gamble paid off transforming the cattle trade and with it the American landscape and diet The Chisholm Trail follows McCoy's vision and the effects of the Chisholm Trail from post Civil War Texas and Kansas to the multimillion dollar beef industry that remade the Great Plains the American diet and the national and international beef trade At every step both nature and humanity put roadblocks in McCoy's way Texas cattle fever had dampened the appetite for longhorns while prairie fires thunderstorms blizzards droughts and floods roiled the land Unscrupulous railroad managers stiff competition from other brokers Indians who resented the usurping of their grasslands and farmers who preferred growing wheat to raising cattle all threatened to impede the McCoy's vision for the trail As author James E Sherow shows by confronting these obstacles McCoy put his own stamp upon the land and on eating habits as far away as New York City and London Joseph McCoy's enterprise forged links between cattlemen entrepreneurs and restaurateurs between ecology disease and technology and between local national and international markets Tracing these connections The Chisholm Trail shows in vivid terms how a gamble made in the face of uncontrollable natural factors indelibly changed the environment reshaped the Kansas prairie into the nation's stockyard and transformed Plains Indian hunting grounds into the hub of a domestic farm culture

**Veterinary Clinical Pathology**, 2006      *Poisons on Our Plates*

Michele Morrone, 2008-06-30 The safety of our food supply is an environmental health issue that affects every American citizen. The Centers for Disease Control and Prevention estimate that more than 76 million people in the United States suffer from foodborne illnesses every year. Microbiological contamination (bacteria, viruses, and parasites) is the leading cause of foodborne illness. Morrone faults the media for focusing the anxieties of the American public on such issues as irradiated food, genetically modified foods, and mad cow disease while ignoring the microbial foodborne pathogens that are running amok in our food supply except when point source outbreaks of E. coli in spinach and green onions or salmonella in peanut butter sicken thousands of people at once. Many readers will be alarmed to learn from *Poisons on Our Plates* that there is no federal environmental health policy or agency that controls the bacteria and viruses in our food supply. The FDA Food Code and various voluntary systems overseen by local health departments are woefully inadequate. Drawing on disturbing stories told by food safety professionals as well as on statistical studies, the author paints a grimly fascinating picture of the impact of bacteria and viruses on our food supply and how they can make us sick. Morrone examines the increased risks that come with the rise in food imports from high contamination countries such as China and Mexico. She advocates major changes to our nation's environmental health policies in order to control the growing dangers that foodborne illness poses to public health.
