Sur Les Groupes Classiques:

Sur les groupes classiques Jean Alexandre Dieudonné, 1981 **La geometrie des groupes classiques** Jean Dieudonné, 2019-06-04 This book gives an excellent survey of recent work on classical groups simplifying and unifying the results of many authors No attempt is made to cover all of the voluminous literature on classical groups the author deals with only that portion of the subject which can be handled by the methods of linear algebra By thus restricting his scope he is able to include proofs of most of the results described thereby making the book more self contained than most *Ergebnisse* tracts In the reviewer's opinion this is an important and well written book which should help to stimulate research on the classical groups The book not only gives a thorough exposition of the present state of the subject but is also an excellent introduction to the modern techniques basic to further work in this field *Canadian Journal of Mathematics*, 1954 **Sur les groupes classiques** Jean Dieudonné, 1967 *Sur les groupes classiques* Jean Dieudonné, 1948 *The Classical Groups and K-Theory* Alexander J. Hahn, O. Timothy O'Meara, 2013-03-09 It is a great satisfaction for a mathematician to witness the growth and expansion of a theory in which he has taken some part during its early years When H Weyl coined the words classical groups foremost in his mind were their connections with invariant theory which his famous book helped to revive Although his approach in that book was deliberately algebraic his interest in these groups directly derived from his pioneering study of the special case in which the scalars are real or complex numbers where for the first time he injected Topology into Lie theory But ever since the definition of Lie groups the analogy between simple classical groups over finite fields and simple classical groups over \mathbb{R} or \mathbb{C} had been observed even if the concept of simplicity was not quite the same in both cases With the discovery of the exceptional simple complex Lie algebras by Killing and E Cartan it was natural to look for corresponding groups over finite fields and already around 1900 this was done by Dickson for the exceptional Lie algebras G_2 and F_4 However a deep reason for this 2-6 parallelism was missing and it is only Chevalley who in 1955 and 1961 discovered that to each complex simple Lie algebra corresponds by a uniform process a group scheme \mathbf{G} over the ring \mathbb{Z} of integers from which for any field K could be derived a group $G(K)$ *Buildings and Classical Groups* Paul B. Garrett, 1997-04-01 Buildings are highly structured geometric objects primarily used in the finer study of the groups that act upon them In *Buildings and Classical Groups* the author develops the basic theory of buildings and BN pairs with a focus on the results needed to apply it to the representation theory of p -adic groups In particular he addresses spherical and affine buildings and the spherical building at infinity attached to an affine building He also covers in detail many otherwise apocryphal results Classical matrix groups play a prominent role in this study not only as vehicles to illustrate general results but as primary objects of interest The author introduces and completely develops terminology and results relevant to classical groups He also emphasizes the importance of the reflection or Coxeter groups and develops from scratch everything about reflection groups needed for this study of buildings In addressing the more elementary spherical constructions the

background pertaining to classical groups includes basic results about quadratic forms alternating forms and hermitian forms on vector spaces plus a description of parabolic subgroups as stabilizers of flags of subspaces The text then moves on to a detailed study of the subtler less commonly treated affine case where the background concerns p adic numbers more general discrete valuation rings and lattices in vector spaces over ultrametric fields Buildings and Classical Groups provides essential background material for specialists in several fields particularly mathematicians interested in automorphic forms representation theory p adic groups number theory algebraic groups and Lie theory No other available source provides such a complete and detailed treatment Conformal Groups in Geometry and Spin Structures Pierre Anglès,2007-10-16

Conformal groups play a key role in geometry and spin structures This book provides a self contained overview of this important area of mathematical physics beginning with its origins in the works of Cartan and Chevalley and progressing to recent research in spinors and conformal geometry Key topics and features Focuses initially on the basics of Clifford algebras Studies the spaces of spinors for some even Clifford algebras Examines conformal spin geometry beginning with an elementary study of the conformal group of the Euclidean plane Treats covering groups of the conformal group of a regular pseudo Euclidean space including a section on the complex conformal group Introduces conformal flat geometry and conformal spinoriality groups followed by a systematic development of riemannian or pseudo riemannian manifolds having a conformal spin structure Discusses links between classical spin structures and conformal spin structures in the context of conformal connections Examines pseudo unitary spin structures and pseudo unitary conformal spin structures using the Clifford algebra associated with the classical pseudo unitary space Ample exercises with many hints for solutions Comprehensive bibliography and index This text is suitable for a course in mathematical physics at the advanced undergraduate and graduate levels It will also benefit researchers as a reference text **Sur les groupes classiques** Jean

Dieudonné (Mathematiker, Frankreich),1967 **Geometric Aspects of the Trace Formula** Werner Müller,Sug Woo Shin,Nicolas Templier,2018-10-11 The second of three volumes devoted to the study of the trace formula these proceedings focus on automorphic representations of higher rank groups Based on research presented at the 2016 Simons Symposium on Geometric Aspects of the Trace Formula that took place in Schloss Elmau Germany the volume contains both original research articles and articles that synthesize current knowledge and future directions in the field The articles discuss topics such as the classification problem of representations of reductive groups the structure of Langlands and Arthur packets interactions with geometric representation theory and conjectures on the global automorphic spectrum Suitable for both graduate students and researchers this volume presents the latest research in the field Readers of the first volume Families of Automorphic Forms and the Trace Formula will find this a natural continuation of the study of the trace formula

Theory Of Group Representations And Applications Ryszard Raczka,Asim Orhan Barut,1986-11-01 The material collected in this book originated from lectures given by authors over many years in Warsaw Trieste Schladming Istanbul Goteborg and

Boulder There is no other comparable book on group representations neither in mathematical nor in physical literature and it is hoped that this book will prove to be useful in many areas of research It is highly recommended as a textbook for an advanced course in mathematical physics on Lie algebras Lie groups and their representations Analysis

Presents through a mix of research and expository articles some of the fascinating new directions in number theory and representation theory arising from recent developments in the Langlands program Special emphasis is placed on nonclassical versions of the conjectural Langlands correspondences where the underlying field is no longer the complex numbers

Weyl and the Problem of Space Julien Bernard,Carlos Lobo,2019-10-09 This book investigates Hermann Weyl s work on the problem of space from the early 1920s onwards It presents new material and opens the philosophical problem of space anew crossing the disciplines of mathematics history of science and philosophy With a Kantian starting point Weyl asks among all the infinitely many conceivable metrical spaces which one applies to the physical world In agreement with general relativity Weyl acknowledges that the metric can quantitatively vary with the physical situation Despite this freedom Weyl deduces with group theoretical technicalities that there is only one kind of legitimate metric This construction was then decisive for the development of gauge theories Nevertheless the question of the foundations of the metric of physical theories

is only a piece of a wider epistemological problem. Contributing authors mark out the double trajectory that goes through Weyl's texts from natural science to philosophy and conversely always through the mediation of mathematics. Readers may trace the philosophical tradition to which Weyl refers and by which he is inspired: Kant, Husserl, Fichte, Leibniz, Becker etc. and explore the mathematical tradition: Riemann, Helmholtz, Lie, Klein that permitted Weyl to elaborate and solve his mathematical problem of space. Furthermore, this volume analyzes the role of the interlocutors with whom Weyl discussed the nature of physical space: Einstein, Cartan, De Sitter, Schrödinger, Eddington. This volume features the work of top specialists and will appeal to postgraduates and scholars in philosophy, the history of science, mathematics or physics.

Relative Aspects in Representation Theory, Langlands Functoriality and Automorphic Forms Volker Heiermann, Dipendra Prasad, 2018-10-01. This volume presents a panorama of the diverse activities organized by V. Heiermann and D. Prasad in Marseille at the CIRM for the Chaire Morlet event during the first semester of 2016. It assembles together expository articles on topics which previously could only be found in research papers. Starting with a very detailed article by P. Baumann and S. Riche on the geometric Satake correspondence, the book continues with three introductory articles on distinguished representations due to P. Broussous, F. Murnaghan and O. Offen, an expository article of I. Badulescu on the Jacquet-Langlands correspondence, a paper of J. Arthur on functoriality and the trace formula in the context of Beyond Endoscopy taken from the Simons Proceedings, an article of W. W. Li attempting to generalize Godement-Jacquet theory and a research paper of C. Moeglin and D. Renard applying the trace formula to the local Langlands classification for classical groups. The book should be of interest to students as well as professional researchers working in the broad area of number theory and representation theory.

History of Topology I.M. James, 1999-08-24. Topology for many years has been one of the most exciting and influential fields of research in modern mathematics. Although its origins may be traced back several hundred years, it was Poincaré who gave topology wings in a classic series of articles published around the turn of the century. While the earlier history, sometimes called the prehistory, is also considered, this volume is mainly concerned with the more recent history of topology from Poincaré onwards. As will be seen from the list of contents, the articles cover a wide range of topics. Some are more technical than others, but the reader without a great deal of technical knowledge should still find most of the articles accessible. Some are written by professional historians of mathematics, others by historically minded mathematicians who tend to have a different viewpoint.

Harmonic Analysis, Group Representations, Automorphic Forms, and Invariant Theory Roger Howe, Jian-Shu Li, 2007. This volume carries the same title as that of an international conference held at the National University of Singapore in January 2006 on the occasion of Roger E. Howe's 60th birthday. Authored by leading members of the Lie theory community, these contributions expanded from invited lectures given at the conference, are a fitting tribute to the originality, depth and influence of Howe's mathematical work. The range and diversity of the topics will appeal to a broad audience of research mathematicians and graduate students interested in symmetry and its profound
