Surely You're Joking Mr Feynman 1st Edition:

"Surely You're Joking, Mr. Feynman!" Richard Phillips Feynman, 1986 For use in schools and libraries only The Nobel Prize winning theoretical physicist talks about his adventure filled life in a series of transcribed taped discussions *"Surely You're Joking, Mr. Feynman!"*: *Adventures of a Curious Character* Richard P. Feynman, 2018-02-06 One of the most famous science books of our time the phenomenal national bestseller that buzzes with energy anecdote and life It almost makes you want to become a physicist Science Digest Richard P Feynman winner of the Nobel Prize in physics thrived on outrageous adventures In this lively work that can shatter the stereotype of the stuffy scientist Detroit Free Press Feynman recounts his experiences trading ideas on atomic physics with Einstein and cracking the uncrackable safes guarding the most deeply held nuclear secrets and much more of an eyebrow raising nature In his stories Feynman s life shines through in all its eccentric glory a combustible mixture of high intelligence unlimited curiosity and raging chutzpah Included for this edition is a new introduction by Bill Gates *The Oxford Handbook of History and Material Culture* Ivan Gaskell, Sarah Anne Carter, 2020-04-07 Most historians rely principally on written sources Yet there are other traces of the past available to historians the material things that people have chosen made and used This book examines how material culture can enhance historians understanding of the past both worldwide and across time The successful use of material culture in history depends on treating material things of many kinds not as illustrations but as primary evidence Each kind of material thing and there are many requires the application of interpretive skills appropriate to it These skills overlap with those acquired by scholars in disciplines that may abut history but are often relatively unfamiliar to historians including anthropology archaeology and art history Creative historians can adapt and apply the same skills they honed while studying more traditional text based documents even as they borrow methods from these fields They can think through familiar historical problems in new ways They can also deploy material culture to discover the pasts of constituencies who have left few or no traces in written records The authors of this volume contribute case studies arranged thematically in six sections that respectively address the relationship of history and material culture to cognition technology the symbolic social distinction and memory They range across time and space from Paleolithic to Punk *"Surely You're Joking, Mr. Feynman!"*: *Adventures of a Curious Character* Richard P. Feynman, 2010-06-28 A New York Times bestseller the outrageous exploits of one of this century s greatest scientific minds and a legendary American original Richard Feynman winner of the Nobel Prize in physics thrived on outrageous adventures Here he recounts in his inimitable voice his experience trading ideas on atomic physics with Einstein and Bohr and ideas on gambling with Nick the Greek cracking the uncrackable safes guarding the most deeply held nuclear secrets accompanying a ballet on his bongo drums painting a naked female toreador In short here is Feynman s life in all its eccentric a combustible mixture of high intelligence unlimited curiosity and raging chutzpah

Eureka's and Euphorias Walter Gratzer, Walter Bruno Gratzer, 2004 The march of science has never proceeded smoothly It

has been marked through the years by episodes of drama and comedy of failure as well as triumph by outrageous strokes of luck deserved and undeserved and sometimes by human tragedy It has seen deep intellectual friendships as well as ferocious animosities and once in a while acts of theft and malice deceit and even a hoax or two Scientists come in all shapes the obsessive and the dilettantish the genial the envious the preternaturally brilliant and the slow witted who sometimes see further in the end the open minded and the intolerant recluses and arrivistes From the death of Archimedes at the hands of an irritated Roman soldier to the concoction of a superconducting witches brew at the very close of the twentieth century the stories in Eureka's and Euphorias pour out told with wit and relish by Walter Gratzer Open this book at random and you may chance on the clumsy chemist who breaks a thermometer in a reaction vat and finds mercury to be the catalyst that starts the modern dyestuff industry or a famous physicist dissolving his gold Nobel Prize medal in acid to prevent it from falling into the hands of the Nazis recovering it when the war ends mathematicians and physicists diverting themselves in prison cells and even in a madhouse by creating startling advances in their subject We witness the careers sometimes tragic sometimes carefree of the great women mathematicians from Hypatia of Alexandria to Sophie Germain in France and Sonia Kovalevskaya in Russia and Sweden and then Marie Curie's relentless battle with the French Academy Here then a glorious parade unfolds to delight the reader with stories to astonish to instruct and most especially to entertain

The First War of Physics Jim Baggott, 2011-08-15 An epic story of science and technology at the very limits of human understanding the monumental race to build the first atomic weapons Rich in personality action confrontation and deception The First War of Physics is the first fully realized popular account of the race to build humankind's most destructive weapon The book draws on declassified material such as MI6's Farm Hall transcripts coded soviet messages cracked by American cryptographers in the Venona project and interpretations by Russian scholars of documents from the soviet archives Jim Baggott weaves these threads into a dramatic narrative that spans ten historic years from the discovery of nuclear fission in 1939 to the aftermath of Joe 1 August 1949's first Soviet atomic bomb test Why did physicists persist in developing the atomic bomb despite the devastation that it could bring Why despite having a clear head start did Hitler's physicists fail Could the soviets have developed the bomb without spies like Klaus Fuchs or Donald Maclean Did the allies really plot to assassinate a key member of the German bomb program Did the physicists knowingly inspire the arms race The First War of Physics is a grand and frightening story of scientific ambition intrigue and genius a tale barely believable as fiction which just happens to be historical fact

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about

emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

The Very First Light John Boslough, John Mather, 2008-10-20 In the early 1990s a NASA led team of scientists changed the way we view the universe With the COBE Cosmic Background Explorer project they showed that the microwave radiation that fills the universe must have come from the Big Bang effectively proving the Big Bang theory beyond any doubt It was one of the greatest scientific findings of our generation perhaps of all time In *The Very First Light* John Mather one of COBE's leaders and science writer John Boslough tell the story of how it was achieved A gripping tale of big money bigger egos tense politics and cutting edge engineering *The Very First Light* offers a rare insider's account of the world of big science

Quantum Gravity and the Standard Model Nigel Cook, *Reading J.Z. Smith* Jonathan Z. Smith, 2018 Jonathan Z Smith 1938 2017 was perhaps the most influential theorist of religion of the last half century In this book four interviews and a previously unpublished essay display something of the dynamic thinking on his feet liveliness that

Smith brought to questions about the study of religion his theoretical preferences and his methods of teaching [100 First Pages](#) Donald P. H. Eaton, 2007-09 This book is called 100 First Pages because that's what it is Each page in the book is supposed to be the first page of a novel Next to that page on the left are my comments about how the novel might go along with some of my personal thoughts on the subject That's the best part because it is a mini encyclopedia almanac journal and to some extent a blog The book covers a large array of topics and genres When you buy the book and read it you can go to my website listed in the back and vote for your favorite BEGINNING You can also suggest a title for the book I promise that I will write the novel which receives the most votes for publication AND if you are the person who suggests the Best Title i.e. the one I will use you will get a cover credit an entire page inside to write anything you like and one dollar for every copy sold Check out the preview and give it a try [Doomsday Men](#) P. D. Smith, 2024-09-04 The gripping untold story of the doomsday bomb the ultimate weapon of mass destruction Chillingly compelling New Scientist In 1950 Hungarian born scientist Leo Szilard made a dramatic announcement on American radio science was on the verge of creating a doomsday bomb For the first time in history mankind realized that he had within his grasp a truly God like power the ability to destroy life itself The shockwave from this statement reverberated across the following decade and beyond If detonated Szilard's doomsday device a huge cobalt clad H bomb would pollute the atmosphere with radioactivity and end all life on earth The scientific creators of such apocalyptic weapons had transformed the laws of nature into instruments of mass destruction and for many people in the Cold War there was little to distinguish real scientists from that fictional master of megadeath Stanley Kubrick's *Dr Strangelove* Indeed as P D Smith's chilling account *Doomsday Men* shows the dream of the superweapon begins in popular culture This is a story that cannot be told without the iconic films and fictions that portray our deadly fascination with superweapons from H G Wells's *The War of the Worlds* to Nevil Shute's *On the Beach* and Kubrick's *Dr Strangelove* or *How I Learned to Stop Worrying and Love the Bomb* Although scientists admitted it was possible to build the cobalt bomb no superpower would admit to having created one However it remained a terrifying possibility striking fear into the hearts of people around the world The story of the cobalt bomb is an unwritten chapter of the Cold War but now P D Smith reveals the personalities behind this feared technology and shows how the scientists responsible for the twentieth century's most terrible weapons grew up in a culture dreaming of superweapons and Wellsian utopias He argues that in the end the doomsday machine became the ultimate symbol of humanity's deepest fears about the science of destruction Weaving together biography science and art Smith has created a compelling history of physics in the twentieth century focusing on the long lasting search for ever more destructive weapons from the development of chemical warfare in World War I Germany through the arms race of the Cold War Captivating and thoroughly referenced this chronicle should interest a wide audience from science and history buffs to armchair politicians Publishers Weekly [Good Lives](#) Samuel Clark, 2021 Samuel Clark explores how we can learn about ourselves by reading thinking through and arguing about autobiography He defends a self

realization account of the self and the good life and argues that self narration plays less role in our lives than some thinkers have supposed and the development and expression of potential much more First Steps in Seismic Interpretation Donald A. Herron,2011 In his classic text Seismic Prospecting for Oil C Hewitt Dix remarks that the correlation of one reflection record with another that is the interpretation of seismic data is a procedure that can hardly be described in words First Steps in Seismic Interpretation Geophysical Monograph Series No 16 is a book about fundamental concepts and practices of seismic interpretation that attempts to achieve such a description Intended for beginning interpreters this book approaches interpretation via synthesis of concepts and practical applications rather than through formal treatment of basic physics and geology It is based on the author s personal experience as a seismic interpreter and is organized along the lines of notes from interpretation classes that he designs and teaches

Our Human Herds: The Theory of Dual Morality (Second Edition, Unabridged) Stephen Martin Fritz,2019-05-14 Let us imagine that somewhere in present day South America a nation exists as the United States was constituted in 1789 George Washington is its president and Thomas Jefferson its secretary of state It is a nation that allows only white males to vote and its president cabinet officials and many of its citizens own slaves If the America of 1789 existed right now what would we think of it Would it be right to invade it in order to liberate its people Would we consider a complete embargo of it until it changed its ways Would it be a pariah among nations Or would we recognize and cooperate with it declaring its president and secretary of state political geniuses Maybe we would just do nothing and trust that in 100 or so years it will straighten itself out What would be the correct way to think of such a nation and its leaders Three hundred years ago if a woman was raped and became pregnant we d kill the rapist and spare the baby Today we spare the rapist and kill the baby One hundred years ago only heterosexual marriages were legal Today political leaders around the world are celebrating gay relationships How and why does our moral outlook change in such matters By the time you are done reading this book you will have concrete answers to these questions and many more This is a learned thoroughly researched study and dazzlingly bright The effervescent approach to writing makes its pages fly by Studies as brilliant as this one deserve a far wider audience An engrossing and mind expanding examination of morality Kirkus Reviews

Madame Wu Chien-shiung: The First Lady Of Physics Research Tsai-chien Chiang,2013-09-04 Narrating the well lived life of the Chinese Madame Curie a recipient of the first Wolf Prize in Physics 1978 the first woman to receive an honorary doctorate from Princeton University as well as the first female president of the American Physical Society this book provides a comprehensive and honest account of the life of Dr Wu Chien Shiung an outstanding and leading experimental physicist of the 20th century *Madness* Petteri

Pietikäinen, 2015-05-15 *Madness A History* is a thorough and accessible account of madness from antiquity to modern times offering a large scale yet nuanced picture of mental illness and its varieties in western civilization The book opens by considering perceptions and experiences of madness starting in Biblical times Ancient history and Hippocratic medicine to the Age of Enlightenment before moving on to developments from the late 18th century to the late 20th century and the Cold War era Petteri Pietikäinen looks at issues such as 18th century asylums the rise of psychiatry the history of diagnoses the experiences of mental health patients the emergence of neuroses the impact of eugenics the development of different treatments and the late 20th century emergence of anti psychiatry and the modern malaise of the worried well The book examines the history of madness at the different levels of micro meso and macro the social and cultural forces shaping the medical and lay perspectives on madness the invention and development of diagnoses as well as the theories and treatment methods by physicians and the patient experiences inside and outside of the mental institution Drawing extensively from primary records written by psychiatrists and accounts by mental health patients themselves it also gives readers a thorough grounding in the secondary literature addressing the history of madness An essential read for all students of the history of mental illness medicine and society more broadly

Computational Philosophy of Science Paul Thagard, 1988 By applying research in artificial intelligence to problems in the philosophy of science Paul Thagard develops an exciting new approach to the study of scientific reasoning This approach uses computational ideas to shed light on how scientific theories are discovered evaluated and used in explanations Thagard describes a detailed computational model of problem solving and discovery that provides a conceptually rich yet rigorous alternative to accounts of scientific knowledge based on formal logic and he uses it to illuminate such topics as the nature of concepts hypothesis formation analogy and theory justification

Losing Church Michael J. Gehring, 2022-01-14 From Ft Smith Arkansas to Princeton New Jersey to Kernersville North Carolina with a stop along the way in Asbury Park New Jersey to pay homage to The Boss Michael Gehring takes us on his journeys as a pastor at a pivot point in history for the church and the world Along the way we meet up with a fascinating array of characters Barbara Brown Taylor Albert Einstein Ernest Hemingway Dietrich Bonhoeffer and Jesus's forerunner John the Baptist to name just a few But it's the questions Gehring raises that make this book not only entertaining but compelling reading for individuals and small groups How might the decline of the church lead us into rediscovering the gospel Did clergy and all of us for that matter make a good choice investing in institutional Christianity How would you describe the emotional price of love What does living a soulful life look like With the humility and genuineness of someone who doesn't pretend to have it all figured out Gehring is the perfect travel companion Come along
