Geddes,Joseph R. Lakowicz,2007-12-11 During recent years our enthusiasm for Radiative Decay Engineering RDE has continually increased Many of the early predictions have been confirmed experimentally We see numerous applications for RDE in biotechnology clinical assays and analytical chemistry While implementation of RDE is relatively simple understanding the principles of RDE is difficult The concepts are widely distributed in the optics and chemical physics literature often described in terms difficult to understand by biophysical scientists RDE includes chapters from the experts who have studied metal particle optics and fluorophore metal interactions This collection describes the fundamental principles for the widespread use of radiative decay engineering in the biological sciences and nanotechnology **Ferroelectric Thin Films** ,2003 *Nanostructured Coatings* Albano Cavaleiro,Jeff T. de Hosson,2007-02-19 Controlling the performance of structures and components of all sizes and shapes through the use of engineered coatings has long been a key strategy in materials processing and technological design The ever increasing sophistication of engineered coatings and the rapid trend toward producing increasingly smaller devices with greater demands on their fabrication properties and performance have led to significant progress in the science and technology of coatings particularly in the last decade or two Nanostructured coatings constitute a major area of scientific exploration and technological pursuit in this development With characteristic structural length scales on the order of a few nanometers to tens of nanometers nanostructured coatings provide potential opportunities to enhance dramatically performance by offering in many situations extraordinary strength and hardness unprecedented resistance to damage from tribological contact and improvements in a number of functional properties At the same time there are critical issues and challenges in optimizing these properties with low tolerance interfacial adhesion and other nonmechanical considerations depending on the coating

systems and applications Nanostructured coatings demand study in a highly interdisciplinary research arena which encompasses surface and interface science study of defects modern characterization methodologies cutting edge experimental developments to deposit synthesize and observe as well as chemically and mechanically probe materials at the atomic and molecular length scales state of the art computational simulation techniques for developing insights into material behaviour at the atomic scale which cannot be obtained in some cases from experiments alone The interdisciplinary nature of the subject has made it a rich playing field for scientific innovation and technological progress
