Bishop, 2015-08-28 It is intended that the book will be a practical guide to provide any reader with the basic information to help them understand what is necessary in order to produce a good barrier coated web or to improve the quality of any existing barrier product After providing an introduction where the terminology is outlined and some of the science is given keeping the mathematics to a minimum including barrier testing methods the vacuum deposition process will be described In theory a thin layer of metal or glass like material should be enough to convert any polymer film into a perfect barrier material The reality is that all barrier coatings have their performance limited by the defects in the coating This book looks at the whole process from the source materials through to the post deposition handling of the coated material This holistic view of the vacuum coating process provides a description of the common sources of defects and includes the possible methods of limiting the defects This enables readers to decide where their development efforts and money can best be used to improve the barrier performance of their own process or materials The 2nd edition contains at least 20% new material including additional barrier testing techniques that have been developed and testing and cleaning equipment brought to market since the 1st edition was published in 2010 The topic of adhesion is covered in more detail and there is a section on the Hansen Solubility Parameter which is a method of predicting the solubility of gases or liquids in materials *Cold Spray in the Realm of Additive Manufacturing* Sunil Pathak, Gobinda C. Saha, 2020-05-12 This book sheds light on the development of the

cold spray process in applications of additive manufacturing AM and repair remanufacturing engineering It covers the process fundamentals of different cold spray techniques namely low pressure cold spray and high pressure cold spray process Bonding mechanism and powder substrate interface are an important part of the book The chapters present the recent developments in materials used in cold spraying for AM and various coating applications The latest research in this area as well as possible avenues of future research are also highlighted as a way to encourage the researchers
