Surface Sediments of the Persian Gulf Near the Qatar Peninsula Jacob Jozef Herman Christiaan Houbolt, 1957

Surface Sediments of the Persian Gulf Near the Qatar Peninsula. Proefschrift, Etc. [With Plates and Charts.].

Jacob Jozef Herman Christiaan Houbolt, 1957 **The Persian Gulf** Bruce H. Purser, 2012-12-06 This volume although not an integrated synthesis treats most aspects of Holocene sedimentation and diagenesis in the Persian Gulf grouping 22 contributions under a single cover and in one language Because these sediments and diagenetic minerals are comparable to those existing in many ancient sedimentary basins their appraisal should be of value to the enlarging group of workers who interpret ancient sedimentary rocks The essential morphological climatic and oceanographic factors determining Holocene sedimentation and diagenesis in the Persian Gulf are summarized in the introductory article by PURSER and SEIBOLD These environmental controls and the overall morphology of the Persian Gulf have much in common with Shark Bay Western Australia described by LOGAN et al 1970 On the other hand the Persian Gulf is markedly different from the better known Florida and Bahamian provinces the floor of the Persian Gulf is gently inclined from continental shoreline to bathymetric axis 80 100 m the Bahamian province on the other hand is horizontal and extremely shallow 2 10 m with very sharply defined shelf edges surrounded by deep oceanic waters These contrasting architectural styles are related to different tectonic frames **Quaternary Carbonate and Evaporite Sedimentary Facies and Their Ancient Analogues** Christopher G. St.

C. Kendall, Abdulrahman S. Alsharhan, 2011-02-18 This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal Sedimentology and several of these volumes have become standard works of reference This volume commemorates the eclectic research of Douglas James Shearman into evaporites which was initiated by his studies of the prograding UAE coastal sabkhas or salt flats that incorporate evaporite minerals which displace and replace earlier carbonate sediments His subsequent proselytization of the study of ancient evaporites in sedimentary sections all over the world led to fundamental advances in our understanding of arid zone carbonate sedimentology The papers presented here are based on presentations made in Abu Dhabi UAE 12 14th October 2004 and 7th 8th November 2006 They provide a retrospective from the 1960 s and 70 s of Holocene evaporites and carbonates recapturing Shearman's contribution by revisiting the Holocene coastal evaporite and carbonate sediments of the Arabian Persian Gulf from Abu Dhabi Qatar and Oman The first set of papers considers these sediments from the perspective of their coastal geomorphology sedimentary character and their geochemistry Later papers examine the significance of these settings in the ancient geological section world wide including examples from the Mesozoic Cenozoic of the Moroccan Atlantic margin and the Upper Jurassic Arab Formation of the Arabian Gulf Change and Development in the Middle East (Routledge Revivals) Clarke John, Bowen-Jones

Howard,2013-10-14 The Middle East is a region of great traditional diversity which has been characterized by immense political social and economic changes still developing over thirty years after the title s original publication A group of oil rich countries have achieved great political significance and some of the highest per capita incomes in the world Much modern development has been spatially polarized accentuating the concentrations of rapidly growing populations and posing severe problems for planners Cultivation and pastoralism the main traditional activities have often suffered from neglect and insufficient investment and both require re evaluation These are the issues addressed by this volume first published in 1981 which contains a series of overviews and case studies written by present or former members of staff and research students of the Department of Geography in the University of Durham in honour of W B Fisher Change and Development in the Middle East provides an interesting and relevant geographical and demographic analysis of this diverse and volatile region

Descriptive Oceanography of Kuwait Harbor Harold Dubach,Theodore J. Wehe,1959 Recent Sedimentary Carbonates J.D. Milliman,G. Müller,F. Förstner,2012-12-06 Few fields of research in the earth sciences have produced as much data and literature as the study of carbonate sediments and rocks The past 25 years in particular have seen a significant increase in studies concerning modern marine and fresh water carbonates With the present worldwide interest in oceanographic research marine carbonates have received the bulk of the attention particularly with respect to shallow water sediments However in terms of the variety of environments compositions and modes of formation non marine carbonates probably encompass a wider spectrum than do marine types Our purpose is to present a two volume treatise on carbonate sediments and rocks both marine and non marine We have confined ourselves to the discussion of modern Holocene environments sediments and components assuming that the compilation of these data will not only be relevant to those working with modern carbonates but will also serve as a necessary reference source for those interested in ancient analogs The first volume by MILLIMAN deals almost exclusively with marine environments while the second volume by MULLER and FORSTNER will concentrate on the non marine carbonates *Carbonate Depositional Systems: Assessing Dimensions and Controlling Parameters* Hildegard Westphal,Bernhard Riegl,Gregor P. Eberli,2010-08-05 Carbonate sediments are of increasing relevance for archives of past environmental conditions and for economical reasons in areas of geothermal energy and hydrocarbon reservoirs Complex interaction of physical and chemical parameters with biological parameters determines the architecture and composition of carbonate sedimentary bodies This book closes some of the still existing gaps in our understanding of the influence and interplay of physical chemical and biological parameters with carbonate sedimentation An understanding of this interaction is not only required for reliable prediction of reservoir quality but also for a robust interpretation of environmental conditions in the past and the present It is written by geologists for geologists in order to provide an easily accessible overview of the large amount of relevant information provided by the neighbouring sciences The approach of the book is to document the modern depositional environments of three classical areas of carbonate deposition

each characteristic for a specific sedimentological setting isolated platform attached shelf ramp in order to assess both the range of physical biological and chemical parameters and their sedimentary response This book presents a comprehensive compilation based on data from published work and unpublished theses and the integration of these data in order to extract previously undiscovered relationships between the discussed parameters and carbonate deposition

International Sedimentary Petrographical Series Heinrich Moritz Emil Schürmann, Jean Cuvillier, Carbonate Facies in Geologic History J.L. Wilson, 2012-12-06 Since 1950 geologists have learned more about the origin and lithification of carbonate sediments than in all the previous years of the history of science This is true in all the diverse fields of carbonate geology the study of Recent environments marine zoology and botany organic geochemistry trace element and isotope geochemistry mineralogy microfacies of depositional environments and trace fossil and sedimentary structure investigation A synthesis of this new knowledge is just beginning to be formulated The purpose of this volume is to introduce the advanced student and petroleum explorationist principally to one important aspect of this study to some of the principles of carbonate geology which may serve to interpret the depositional environments of ancient strata and to better define their sequences and patterns Chapter I is a brief review of principles of carbonate sedimentation For a full discussion of the mineralogy geochemistry and diagenesis of carbonates along with a review of Holocene sediments one may refer to Bathurst s 1971 and Milliman s 1974 texts Chapter II reviews stratigraphic and paleotectonic concepts and discusses a general model for carbonate deposition Chapter III offers an outline of carbonate petrography concentrating on lithologic description for the purposes of environmental interpretation For a further review of this subject and excellent photomicrographs Horowitz and Potter 1971 and Majewske 1969 may be used

Coral Reefs of the Gulf Bernhard Riegl, Sam J. Purkis, 2012-04-13 Coral Reefs of the Gulf Adaptation to Climatic Extremes is a complete review and reference for scientists engineers and students concerned with the geology biology or engineering aspects of coral reefs in the Middle East It provides for the first time a complete review of both the geology and biology of all extant coral areas in the Gulf the water body between Iran and the Arabian Peninsula In summer this area is the hottest sea with abundant coral growth on earth and already today exhibits a temperature that is predicted to occur across the tropical ocean in 2100 Thus by studying the Gulf today much can be learned about tomorrow s world and the capability of coral reefs to adapt to climatic extremes This volume provides the most authoritative and up to date review of the coral reefs in the Gulf It can be used as a volume of general reference or as a textbook treating recent coral reefs Written by local and international experts the text is richly illustrated and will remain a standard reference for the region for decades to come Contributions stretch from climatology through geology biology ecological modelling and fisheries science to practical conservation aspects The book is useful for the technical expert and casual reader alike

Sabkha Ecosystems Bilquees Gul, Benno Böer, M. Ajmal Khan, Miguel Clüsener-Godt, Abdul Hameed, 2019-08-05 This book is the sixth and final volume in the Tasks for Vegetation Science book series and it concludes

the most comprehensive scientific documentation dealing with hypersaline ecosystems of the world *Carbonate Bottom Sediments of the Arabian Gulf in Relation to Environmental Parameters* Ali Yousuf al-Temeemi, 1972 *Proceedings - Coastal Geography Conference*, 1959 **Geological Survey Professional Paper**, 1966 **Deltaic and Shallow Marine Deposits**, 2011-09-22 Deltaic and Shallow Marine Deposits *The Biology of the Indian Ocean* S.A. Gerlach, B. Zeitzschel, 2012-12-06 This volume contains the proceedings of a Symposium held at the University of Kiel Germany from 31 March to 6 April 1971 The Symposium was organized by the Scientific Committee on Oceanic Research SCOR and the Marine Productivity section of the International Biological Programme IBIPM with the assistance of the United Nations Educational Scientific and Cultural Organization UNESCO the Food and Agriculture Organization FAO and the International Association of Biological Oceanography IABO The aim of the Symposium was to summarize present knowledge of the biology of the Indian Ocean Twenty two presentations by invited speakers reviewed the research work carried out during the International Indian Ocean Expedition IIOE 1959 1965 the first cooperative project coordinated by the Intergovernmental Oceanographic Commission IOC In addition reports were presented of postexpedition examination of material and of more recent investigations relevant to the aims of the IIOE In keeping with the aims of Ecological Studies the present volume contains much new information and some synthesis all directed towards obtaining an understanding of the functioning and organization of the ecosystem of the Indian Ocean The plan of the Symposium was to present the relevant meteorological physical chemical and geological background and to follow this with the various aspects of biological oceanography Because of the uneven stage of development of the different disciplines the papers included in this volume vary in their analytical level *Petroleum Sedimentology* Winfried Zimmerle, H. Zimmerle, 1995-04-30 Knowledge of the principles and methods of petroleum sedimentology is essential for oil and gas exploration and exploitation This book is designed as an introductory text for students in petroleum geology and applied sedimentology as well as a useful companion for advanced technicians explorationists geophysicists and petroleum engineers Source rock lithology and type of trap define the quality of a hydrocarbon accumulation This interrelationship is exemplified by seven case histories worldwide NW Europe Saudi Arabia U S A Mexico CIS China Moreover successful exploitation and enhanced oil recovery often depend on an adequate knowledge of the sedimentology of a reservoir Photographs illustrate macroscopic and microscopic aspects of source rocks as well as reservoir sandstones and limestones that are most important for hydrocarbon exploration A comprehensive list of references encourages further study **Geological Survey Professional Paper** Geological Survey (U.S.), 1962 *Arabian Deserts* H. Stewart Edgell, 2006-07-21 This is the first comprehensive survey of all the deserts of Arabia based largely on the author's 50 years of experience there The text deals with every kind of desert in the region from vast sand seas to clay pans and stony plains to volcanic flows Along with dune types unique to the region the author outlines climatic changes current ecology and human influence on desertification
