The Theosophist ,1927 **Scientific Idealism ; Or, Matter and Force and Their Relation to Life and Consciousness** William Kingsland,1909 *Simple Aerodynamics and the Airplane* United States. Army. Air Corps,Charles Norton Monteith,1927 **Optimal Interconnection Trees in the Plane** Marcus Brazil,Martin Zachariasen,2015-04-13

This book explores fundamental aspects of geometric network optimisation with applications to a variety of real world problems It presents for the first time in the literature a cohesive mathematical framework within which the properties of such optimal interconnection networks can be understood across a wide range of metrics and cost functions The book makes use of this mathematical theory to develop efficient algorithms for constructing such networks with an emphasis on exact solutions Marcus Brazil and Martin Zachariasen focus principally on the geometric structure of optimal interconnection networks also known as Steiner trees in the plane They show readers how an understanding of this structure can lead to practical exact algorithms for constructing such trees The book also details numerous breakthroughs in this area over the past 20 years features clearly written proofs and is supported by 135 colour and 15 black and white figures It will help graduate students working mathematicians engineers and computer scientists to understand the principles required for designing interconnection networks in the plane that are as cost efficient as possible Geometrical Charged-Particle Optics Harald H. Rose,2009 This resource covering all theoretical aspects of modern geometrical charged particle optics is aimed at anyone involved in the design of electron optical instruments and beam guiding systems for charged particles

Semiotics of Visual Language Fernande Saint-Martin,1990-10-22 the details of Saint Martin s argument contain a wealth of penetrating observations from which anyone with a serious interest in visual communication will profit Journal of Communication Saint Martin elucidates a syntax of visual language that sheds new light on nonverbal language as a form of representation and communication She describes the evolution of this language in the visual arts as well as its multiple uses in contemporary media The result is a completely new approach for scholars and practitioners of the visual arts eager to decode the many forms of visual communication **Singular Points of Plane Curves** C. T. C. Wall,2004-11-15 Even the simplest singularities of planar curves e g where the curve crosses itself or where it forms a cusp are best understood in terms of complex numbers The full treatment uses techniques from algebra algebraic geometry complex analysis and topology and makes an attractive chapter of mathematics which can be used as an introduction to any of these topics or to singularity theory in higher dimensions This book is designed as an introduction for graduate students and draws on the author s experience of teaching MSc courses moreover by synthesising different perspectives he gives a novel view of the subject and a number of new results *Memoirs from the Biological Laboratory of the Johns Hopkins University* ,1898
