The Management Of Manufacturing Systems:

The Management of Manufacturing Systems John Dennis Radford, Donald Brian Richardson, 1977 **Design and Management of Manufacturing Systems** Arkadiusz Gola, 2021-09-02 Although the design and management of manufacturing systems have been explored in the literature for many years now they still remain topical problems in the current scientific research The changing market trends globalization the constant pressure to reduce production costs and technical and technological progress make it necessary to search for new manufacturing methods and ways of organizing them and to modify manufacturing system design paradigms This book presents current research in different areas connected with the design and management of manufacturing systems and covers such subject areas as methods supporting the design of manufacturing systems methods of improving maintenance processes in companies the design and improvement of manufacturing processes the control of production processes in modern manufacturing systems production methods and techniques used in modern manufacturing systems and environmental aspects of production and their impact on the design and management of manufacturing systems The wide range of research findings reported in this book confirms that the design of manufacturing systems is a complex problem and that the achievement of goals set for modern manufacturing systems requires interdisciplinary knowledge and the simultaneous design of the product process and system as well as the knowledge of modern manufacturing and organizational methods and techniques Effective Resource Management in Manufacturing Systems Massimiliano Caramia, Paolo Dell'Olmo, 2006-06-16 Manufacturing systems work with scarce resources in dynamic environments Managers need to assign production facilities to parallel activities respecting operational constraints and deadlines while keeping costs low Old scheduling approaches are inadequate when a task both requires a set of different resources and a trade off between objectives More sophisticated models and algorithms are needed by these managers This book provides robust methods for achieving effective resource allocation It also solves problems such as resource levelling sizing of machines and production layouts cost optimization in production planning and scheduling that occur daily and often generate cost overruns The quantitative methods used cover both mathematical programming and algorithms leading to high quality solutions Details of experimentation put these techniques in a practical perspective This book is a valuable resource for postgraduate students and researchers in business engineering or computer science

Tzafestas,2012-12-06 Modern manufacturing systems involve many processes and operations that can be monitored and controlled at several levels of intelligence At the highest level there is a computer that supervises the various manufacturing functions whereas at the lowest level there are stand alone computer controlled systems of manufacturing processes and robotic cells Until recently computer aided manufacturing systems constituted isolated islands of automation each oriented to a particular application but present day systems offer integrated approaches to manufacturing and enterprise operations These modern systems known as computer integrated manufacturing CIM systems can easily meet the current performance and manufacturing competitiveness requirements under strong environmental changes CIM systems are much of a challenge and imply a systemic approach to the design and operation of a manufacturing enterprise Actually a CIM system must take into account in a unified way the following three views the user view the technology view and the enterprise view This means that CIM includes both the engineering and enterprise planning and control activities as well as the information flow activities across all the stages of the system

Manufacturing Systems Engineering Katsundo Hitomi,2017-10-19 This second edition of the classic textbook has been written to provide a completely up to date text for students of mechanical industrial manufacturing and production engineering and is an indispensable reference for professional industrial engineers and managers In his outstanding book Professor Katsundo Hitomi integrates three key themes into the text manufacturing technology production management industrial economics Manufacturing technology is concerned with the flow of materials from the acquisition of raw materials through conversion in the workshop to the shipping of finished goods to the customer

Production management deals with the flow of information by which the flow of materials is managed efficiently through planning and control techniques Industrial economics focuses on the flow of production costs aiming to minimise these to facilitate competitive pricing Professor Hitomi argues that the fundamental purpose of manufacturing is to create tangible goods and it has a tradition dating back to the prehistoric toolmakers The fundamental importance of manufacturing is that it facilitates basic existence it creates wealth and it contributes to human happiness manufacturing matters Nowadays we regard manufacturing as operating in these other contexts beyond the technological It is in this unique synthesis that Professor Hitomi's study constitutes a new discipline manufacturing systems engineering a system that will promote manufacturing excellence Key Features The classic textbook in manufacturing engineering Fully revised edition providing a modern introduction to manufacturing technology production management and industrial economics Includes review questions and problems for the student reader

Manufacturing Systems Design and Analysis B. Wu, 2012-12-06 A technological book is written and published for one of two reasons it either renders some other book in the same field obsolete or breaks new ground in the sense that a gap is filled The present book aims to do the latter On my return from industry to an academic career I started writing this book because I had seen that a gap existed Although a great deal of information appeared in the published literature about various technical aspects of advanced manufacturing technology AMT surprisingly little had been written about the systems context within which the sophisticated hardware and software of AMT are utilized to increase efficiency Therefore I have attempted in this book to show how structured approaches in the design and evaluation of modern manufacturing plant may be adopted with the objective of improving the performance of the factory as a whole I hope this book will be a contribution to the newly recognized multidisciplinary engineering function known as manufacturing systems engineering The text has been designed specifically to demonstrate the systems aspects of modern manufacturing operations including systems concepts of manufacturing operation manufacturing systems modelling and evaluation and the structured design of manufacturing systems One of the major difficulties associated with writing a text of this nature stems from the diversity of the topics involved I have attempted to solve this problem by adopting an overall framework into which the relevant topics are fitted
