The Genetic Basis Of Evolutionary Change

Michael Ruse, Joseph Travis

The Genetic Basis Of Evolutionary Change:

The Genetic Basis of Evolutionary Change Richard C. Lewontin, 1974 In this volume the author surveys the many experiments using new molecular techniques that have revealed the enormous wealth of hereditary variation among individuals and have quantified the genetic changes that take place in the origin of new species Dr Lewontin proposes new theories to attack the problems which still confront the scientist While a tremendous amount of variation has been revealed a satisfactory explanation of the origin and maintenance of such variation is still lacking It is not at all clear whether adaptive evolution makes use of the kind of genetic diversity that is now known to be so common Populatin genetic theory Dr Lewontin observes leads to conflicting conclusions about the forces operating on the variation and it appears that current theory is inadequate to cope with the data Noting that the interaction among genes in evolution is of primary importance in the interpretation of genetic change he urges that theory needs to be developed which takes into account the evolution of the genome as a whole rather than the independent evolution of each gene A book which summarizes in an unusually felicitous way the findings of the rapidly growing science of molecular evolution and points out new directions for its future

The Genetic Basis of Evolutionary Change Richard C. Lewontin, 1974 The structure of evolutionary genetics The struggle to measure variation Genic variation in natural populations The Genetics of species formation The theory The paradox of variation The genome as the united selection

Embryos, Genes, and Evolution Rudolf A. Raff, Thomas C. Kaufman, 1983

The Structure of Evolutionary Theory Stephen Jay Gould, 2002-03-21 The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of explanatory force unprecedented in our time a landmark publication both for its historical sweep and for its scientific vision With characteristic attention to detail Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism that natural selection works on organisms not genes or species that it is almost exclusively the mechanism of adaptive evolutionary change and that these changes are incremental not drastic Next he examines the three critiques that currently challenge this classic Darwinian edifice that selection operates on multiple levels from the gene to the group that evolution proceeds by a variety of mechanisms not just natural selection and that causes operating at broader scales including catastrophes have figured prominently in the course of evolution Then in a stunning tour de force that will likely stimulate discussion and debate for decades Gould proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty-three Living Legends people who embody the quintessentially American ideal of individual creativity conviction dedication and exuberance Each of these qualities finds full expression in this peerless work the likes of which the scientific world has not seen and may not see again for well over a century

Primer Second Edition is for advanced undergraduate and graduate biology students studying molecular biology comparative biology evolution genomics and biodiversity This book explains the essential concepts underlying the storage and manipulation of genomics level data construction of phylogenetic trees population genetics natural selection the tree of life DNA barcoding and metagenomics The inclusion of problem solving exercises in each chapter provides students with a solid grasp of the important molecular and evolutionary questions facing modern biologists as well as the tools needed to answer them

Developmental Plasticity and Evolution Mary Jane West-Eberhard, 2003-03-13 West Eberhard widely recognized as one of the most incisive thinkers in evolutionary biology assesses all the evidence for our current understanding of the role of changes in body plan and development for the process of speciation The process of evolution is systematically reassessed to integrate the insights coming from developmental genetics

A Broader View for Plant EvoDevo: Novel Approaches for Diverse Model Systems Verónica S. Di Stilio, Rainer Melzer, Jocelyn C. Hall, 2017-05-11 This collection attempts to integrate work pertaining to a fundamental question in plant evolution What are the molecular underpinnings for the origin of different plant forms Among the many facets this question touches are the transition to land the emergence of vascular plants the origin of the seed and the origin and diversification of floral form We aim to bring to the forefront the most salient and original plant systems and approaches within an inclusive phylogenetic context that encompasses representatives of the major lineages of land plants

Evolution Michael Ruse, Joseph Travis, 2009-02-28 Spanning evolutionary science from its inception to its latest findings from discoveries and data to philosophy and history this book is the most complete authoritative and inviting one volume introduction to evolutionary biology available Clear informative and comprehensive in scope Evolution opens with a series of major essays dealing with the history and philosophy of evolutionary biology with major empirical and theoretical questions in the science from speciation to adaptation from paleontology to evolutionary development evo devo and concluding with essays on the social and political significance of evolutionary biology today A second encyclopedic section travels the spectrum of topics in evolution with concise informative and accessible entries on individuals from Aristotle and Linnaeus to Louis Leakey and Jean Lamarck from T H Huxley and E O Wilson to Joseph Felsenstein and Motoo Kimura and on subjects from altruism and amphibians to evolutionary psychology and Piltdown Man to the Scopes trial and social Darwinism Readers will find the latest word on the history and philosophy of evolution the nuances of the science itself and the intricate interplay among evolutionary study religion philosophy and society Appearing at the beginning of the Darwin Year of 2009 the 200th anniversary of the birth of Charles Darwin and the 150th anniversary of the publication of the Origin of Species this volume is a fitting tribute to the science Darwin set in motion
