**EBOOK: Managing Consultants** Timothy Clark, 1995-11-16 Managers are

increasingly being convinced from all sides that traditional structures systems and cultures are no longer appropriate to today's competitive conditions and that organizations must change fundamentally. It is in the context of these pressures that managers feel it increasingly necessary to seek external support by turning to those who offer some solution to these dilemmas: the management consultants. This book argues that the initial selection of a management consultancy and the subsequent evaluation of the quality of service they deliver are inherently problematic. Two root causes are identified: the structure and dynamics of the management consultancy industry and the characteristics of the management consultancy service. Timothy Clark examines how these problems are overcome by revealing the foundations of a successful and long-term client-consultant relationship. In a departure from previous analyses of management consultancy, he argues that the key to understanding consultancy and its success is to appreciate that successful consultancy in its methods at least emphasizes the active management of the client-consultant relationship. At the core of successful consultancy is the art of impression management. A consultant seeks to create a reality which persuades the client that they have purchased a high-quality service. The work of consultants is analysed and understood in terms of the theatrical analogy or dramaturgical metaphor. A consultancy intervention is therefore conceived of as a dramatic event. This is illustrated with reference to two types of consultancy work: executive search (i.e. headhunting) and the work of management gurus.

*Introduction to Coastal Processes and Geomorphology* Robin Davidson-Arnott, 2009-12-03 Written for undergraduate students studying coastal geomorphology, this is the complete guide to the processes at work on our coastlines and the features we see in coastal systems across the world. Accessible to students from a range of disciplines, the quantitative approach of this book helps to build a solid understanding of wave and current processes that shape coastlines. The resulting processes of erosion, transport and deposition, and the features they create, are clearly explained with over 400 illustrations and photographs. From sandy beaches to coral reefs, the major coastal features are related to contemporary processes and to sea-level changes over the past 25,000 years. Key equations describing or predicting measurements from instruments used to map these processes are all presented in this wide-ranging overview. Davidson-Arnott completes this teaching package with online material that brings the subject to life, including videos of coastal processes and virtual field trips.

**Risk, Reliability and Safety: Innovating Theory and Practice** Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25. The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence, and other sectors, the management of risk during design, manufacture, operation, and decommissioning is vital. Methods and models to support risk-informed decision making are well established but are continually challenged by technology innovations, increasing interdependencies, and changes in societal expectations. *Risk, Reliability and Safety* contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow, Scotland, 25-29 September 2016. Authors include scientists, academics, practitioners, regulators, and other key individuals with expertise and experience relevant to specific areas. Papers include domain-specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges, and exposition of concepts, methods, and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability modelling, maintenance optimisation, uncertainty analysis, resilience assessment, risk and crisis management.
