Super Student Happy Kid:

Super Student, Happy Kid! Sally DeBolt Ketchum, 1995 With wit and thoughtful compassion Richard Meehan presents one of the most perplexing of contemporary moral predicaments one that arises in every attempt to assess potentially hazardous technologies He focuses on the long running controversy over suspected earthquake faults near the nation's first corporately owned nuclear test reactor at Vallecitos California and uses this account of the politics of expertise to probe the nature of scientific truth and its relationship to the determination of public safety At Vallecitos Meehan points out the opinions of the experts were radically divided Where one group saw clear and ominous evidence of an earthquake fault in trenches dug at this showpiece site others saw only the mark of an ancient landslide How did these experts arrive at their opinions Were they simply representing corporate as opposed to environmentalist points of view And how are the public regulatory agencies charged with deciding such issues supposed to balance these seemingly irreconcilable opinions The Atom and the Fault explores these crucial questions as the issue of the earthquake safety of nuclear power plants continues to grow into a struggle encompassing government regulatory bodies public utilities private industry engineers geologists and citizen activists It paints candid portraits of the principal expert players clarifies the difficult and often delicate interplay of honesty and loyalties among them and lucidly explains the technical issues and viewpoints involved As a professional participant in several environmental controversies in which so called scientific facts were represented by opposing points of view Meehan is uniquely qualified to tell this tale He is a consultant to industry government agencies and law firms specializing in forecasting and damage assessment related to earthquakes and land failures and an adjunct professor in the Values Technology Science and Society program at Stanford University His first book *Getting Sued and Other Tales of the Engineering Life* was published by The MIT Press in 1981 Missing Genetic Pieces Sherry Baker-Gomez, 2004 VCFS is also referred to as Velo

Colormute Mica Pollock, 2009-04-11 This book considers in unprecedented detail one of the most confounding questions in American racial practice when to speak about people in racial terms Viewing race talk through the lens of a California high school and district Colormute draws on three years of ethnographic research on everyday race labeling in education Based on the author s experiences as a teacher as well as an anthropologist it discusses the role race plays in everyday and policy talk about such familiar topics as discipline achievement curriculum reform and educational inequality Pollock illustrates the wide variations in the way speakers use race labels Sometimes people use them without thinking twice at other moments they avoid them at all costs or use them only in the description of particular situations While a major concern of everyday race talk in schools is that racial descriptions will be inaccurate or inappropriate Pollock demonstrates that anxiously suppressing race words being what she terms colormute can also cause educators to reproduce the very racial inequities they abhor The book assists readers in cultivating a greater understanding of the pitfalls and possibilities of everyday race talk and clarifies previously murky discussions of colorblindness By bridging the gap between theory and practice Colormute will be enormously helpful in fostering ongoing conversations about dismantling racial inequality in America
