**Retail Space Analytics** Ahmed Ghoniem, Bacel Maddah, 2023-06-09 This edited volume presents state of the art research that can leverage large scale sensory data collected in grocery retail stores where a single customer visit may generate nearly 10 000 data points For decades retail shelf space optimization has been confined to the analysis of product allocation decisions over a limited number of shelves often taken in isolation Such models incorporated interesting concepts relating to space and cross space elasticity in the design of planograms Although useful these models have not addressed the bigger picture of planning store shelf space in a more holistic manner It is important to note that the space planning analytics in the book are particularly important in an era where e commerce is on the rise and brick and mortar retailing is declining and experiencing severe crises the retail apocalypse This is the first research oriented book that examines novel problems in store space analytics triggered by modern day sensory technologies customer trackers and transactional tools point of sales etc In fact such transformative technologies have prompted the development of new and exciting business practices accompanied by the need for powerful data driven models and analyses in retail shelf space and layout planning The book will facilitate developing algorithms and decision tools that allow a better leverage of the data collected from these mediums

**Performance Benchmarking of Application Monitoring Frameworks** Jan Waller, 2014-12-19 Application level monitoring of continuously operating software systems provides insights into their dynamic behavior helping to maintain their performance and availability during runtime Such monitoring may cause a significant runtime overhead to the monitored system depending on the number and location of used instrumentation probes In order to improve a system s instrumentation and to reduce the caused monitoring overhead it is necessary to know the performance impact of each probe While many monitoring frameworks are claiming to have minimal impact on the performance these claims are often not backed up with a detailed performance evaluation determining the actual cost of monitoring Benchmarks can be used as an effective and affordable way for these evaluations However no benchmark specifically targeting the overhead of monitoring itself exists Furthermore no established benchmark engineering methodology exists that provides guidelines for the design execution and

analysis of benchmarks This thesis introduces a benchmark approach to measure the performance overhead of application level monitoring frameworks The core contributions of this approach are 1 a definition of common causes of monitoring overhead 2 a general benchmark engineering methodology 3 the MooBench micro benchmark to measure and quantify causes of monitoring overhead and 4 detailed performance evaluations of three different application level monitoring frameworks Extensive experiments demonstrate the feasibility and practicality of the approach and validate the benchmark results The developed benchmark is available as open source software and the results of all experiments are available for download to facilitate further validation and replication of the results
