Federal Aviation Administration, 1975 **Recent Developments in High-Speed Transport** Dmitry Yu. Strelets, Oleg N. Korsun, 2023-04-10

This book describes the basic concepts and various aspects of creating a new generation supersonic passenger aircraft. It presents the fundamental and applied problems essential to the design of aircraft of this type. Solutions to the problems of reducing supersonic boom, environmental noise, harmful emissions, increasing the efficiency of propulsion systems, and the general concept and certification are described. The development of high speed transport as a means of improving mobility and quality of life is a relevant task for research teams in many countries. The publication includes selected articles from the 1st International Conference on High Speed Transport Development organized by the Moscow Aviation Institute National Research University, which by participating in many research and commercial projects including international ones, has accumulated a lot of competencies sufficient to act as a platform for knowledge exchange in this field. The target audience of this book are researchers working on high speed transport, postgraduate students, as well as any individuals willing to broaden their knowledge of high speed aircraft.

Theoretical and Experimental Aerodynamics Mrinal

Kaushik, 2018-12-15 This book is intended as a text for undergraduate and graduate courses in aerodynamics typically offered to students of aerospace and mechanical engineering programs. It covers all aspects of aerodynamics. The book begins with a description of the standard atmosphere and basic concepts, then moves on to cover the equations and mathematical models used to describe and characterize flow fields, as well as their thermodynamic aspects and applications. Specific emphasis is placed on the relation between concepts and their use in aircraft design. Additional topics of interest to the reader are presented in the Appendix, which draws on the teachings provided in the text. The book is written in an easy-to-understand manner with pedagogical aids such as chapter overviews, summaries, and descriptive and objective questions to help students evaluate their progress. Atmospheric and gas tables are provided to facilitate problem solving. Lastly, a detailed bibliography is included at the end of each chapter to provide students with further resources. The book can also be used as a text for professional development courses in aerodynamics.
