White, 2013-11-09 This volume of Modern Aspects of Electrochemistry contains six chapters The first four chapters are about phenomena of interest at the microscopic level and the last two are on phenomena at the macroscopic level In the first chapter Uosaki and Kita review various theoretical models that have been presented to describe the phenomena that occur at an electrolyte semiconductor interface under illumination In the second chapter Orazem and Newman discuss the same phenomena from a different point of view In Chapter 3 Bogus lavsky presents state of the art considerations of transmembrane potentials and other aspects of active transport in biological systems Next Burke and Lyons present a survey of both the theoretical and the experimental work that has been done on hydrous oxide films on several metals The last two chapters cover the topics of the production of chlorine and caustic and the phenomena of electrolytic gas evolution In Chapter 5 Hine et al describe the engineering aspects of the three processes used in the chlor-alkali industry and in Chapter 6 Sides reviews the macroscopic phenomena of nucleation growth and detachment of bubbles and the effect of bubbles on the conductivity of and mass transfer in electrolytes *Supplement to Mellor's Comprehensive Treatise on Inorganic and Theoretical Chemistry*, 1956

Adams,2017-05-04 The Chemistry of Chlorine Bromine Iodine and Astatine is a special edition that contains selected sections and addresses the needs of specialists in their respective fields The text describes the general atomic properties of non metals particularly the halogens as being the perfect series to study both in physical and chemical terms The book explains that the combination of the atomic properties implies excellent electronegativity values for the halogen atoms The text also cites some behavior characteristics of halogens that are irregular such as chlorine and bromine are similar but differ from fluorine on one side and iodine on the other The book also compares the general methods of producing chlorine bromine or iodine by 1 oxidation of halide derivatives or 2 reduction of compounds of the halogens in positive oxidation states The text then reviews the application of a complex valence theory that raises difficult questions about the bonding in halogen oxygen molecules The book also explains the biological behavior of astatine that accumulates in the liver or in the thyroid gland depending on the method of administration either as a radiocolloid or as a true solution The book is suitable for molecular biologists and researchers molecular chemists and medical researchers The Group 13 Metals Aluminium, Gallium, Indium and Thallium Simon Aldridge,Anthony J.
