The introduction of the Foundation Stage has led to practitioners seeking ways to teach maths which are more in line with the creative and playful ways young children learn other subjects Linda Pound draws on current thinking about children's mathematical development to show how you can encourage and enhance the numeracy skills of any child in the early years by linking maths to every day life situations and making it a playful and enjoyable cross curricular activity This highly practical and engaging text includes chapters on why maths is often seen as hard and what practitioners can do to help young children be more successful exploring shapes space measures and patterns how to make maths more fun and playful using games humour stories and rhymes using music and dance to enhance mathematical understanding encouraging children to see the connection between maths and everyday experiences through for example sorting matching and guessing creating an environment for mathematical development indoors and out Concluding with a chapter on how practitioners and parents can become more confident in their use of maths this user friendly text packed full of ideas is essential reading for practitioners in any early years setting Students on Early Education courses will also find much here to inspire them Enriching Mathematics in the Primary Curriculum Sue Pope, Pablo Mayorga, 2019-03-11 How do I enrich children's learning of primary mathematics to bring the subject to life This book inspires and supports you the new and beginning teacher to use talk rich and open tasks that bring mathematics to life in your classroom Tried and loved practical tasks that engage and motivate Supports you to create confident and resilient mathematicians in your classroom Explores ways to engage children in mathematics across the primary curriculum Focuses on understanding key mathematical concepts and the connections between them **Understanding Mathematics for** Young Children Derek Haylock, Anne D Cockburn, 2017-02-08 Having a deep understanding of the mathematical ideas and concepts taught in the classroom is vital as a nursery or primary school teacher In order for children to get to grips with these concepts trainee teachers need to be aware of how they come to interpret and understand them Now in its 5th edition this essential book helps trainee teachers develop their own knowledge of key mathematical ideas and concepts for the

nursery and primary classroom Now focusing specifically on ages 3 7 it also supports trainees with several age appropriate classroom activities As well as updates to further reading suggestions and research focuses this revised edition includes new content on Mastery in learning mathematics Simple fractions Roman numerals Money as a form of measurement

Engaging Families as Children's First Mathematics Educators Sivanes Phillipson, Ann Gervasoni, Peter Sullivan, 2016-11-21 This book explores how professionals can engage and inspire parents to support their young children s mathematics learning Bringing together international experts researchers and scholars it proposes a framework for engaging with and supporting parents including those who are less aware of the crucial development of children's mathematical skills in the early years Focusing on mathematics learning from birth to 5 years the book s underlying assumption is that it is possible to offer guidance to professionals working with families with young children concerning how to engage and support families in the area of mathematics learning including those families who seem alienated from education services Specifically the respective chapters present a framework for understanding children's early mathematical development and the important role of families in this regard They describe effective strategies for engaging families in their children s mathematics learning including those who are marginalised and experience multiple disadvantages so that all families can best support their children's mathematical learning and their development of positive attitudes towards learning In closing hurdles and opportunities within the systems surrounding family engagement are addressed **Mathematics in Nursery** Education, Second Edition Ann Montague-Smith, 2014-05-22 This Second Edition covers the mathematics needed to teach the Early Learning Goals It has been up dated to include new research findings as well as new topics for example using number lines with young children The topics of counting number including early addition and subtraction pattern measures and shape and space are covered in detail Each chapter contains suggestions for key questions to ask in order to encourage children to discuss their mathematics and to demonstrate what they know and understand There are sections on developing problem solving skills working with parents and other adults in the nursery setting as well as detailed charts giving ideas for activities and how to assess learning and some activities planned in full The final chapter gives detailed help with planning and assessment of mathematics. The book is intended for anyone working with children in the early years teachers nursery nurses classroom assistants playgroup leaders and workers child minders and day care staff It is particularly suitable as a course text for those training to be teachers either through the undergraduate route or through a PGCE and for those Foundations of Mathematics Carole Skinner, Judith Stevens, 2013-01-24 studying for early childhood degrees or diplomas A practical guide to developing children's early mathematical development written by leading early years numeracy experts

Children's Mathematics Elizabeth Carruthers, Maulfry Worthington, 2006-08-30 In Case Study 5 a grassroots Children's Mathematics Network group the initiative supported the

participants in their professional change by giving them a space for the detailed and joint consideration of children s mathematical thinking Another significant feature of this initiative is its focus on careful consideration and analysis of children's mathematics and the ways in which professionals can support and encourage the children's mathematical thinking and reasoning The standard of the mathematical understanding thinking and reasoning that the displays revealed was far higher than the specified curriculum objectives for children of this age Researching Effective CPD in Mathematics Education RECME project NCETM 2009 The review also plays great score by play based learning of a mathematical nature and makes specific recommendations regarding early mark making as a precursor to abstract mathematical symbolism Section 115 features children's mathematical graphics and emphasises The role of mark making in children's cognitive development is set out in the taxonomy Carruthers and Worthington 2006 The report recommends that local authorities leaders managers and head teachers should provide a culture with a significant focus on mathematical mark making and a learning environment that encourages children to choose to use their own mathematical graphics to support their mathematical thinking and processes The Williams Maths Review DCSF 2008 At the very heart of the success of the book is the authors ability to see mathematics through young children s eyes by listening to and reflecting on the constant efforts made by children to make sense of their world This is a liberating book which proposes that the teaching of mathematics could and should be a highly creative and enjoyable proceess Branwen Llewelyn Jones Early Years Consultant at PACE Ltd TACTYC Ground breaking To single out any one chapter would be unfair because there is something thought provoking and inspirational throughout If you want to expand your understanding upwards and outwards then get a copy soon Times Educational Supplement I first read Children's Mathematics Making Marks Making Meaning a couple of years ago and it had an immediate impact on my own thinking and teaching and the work I do with trainee teachers I m sure you will find it compelling reading too I think it has the potential to change in a fundamental way how we think about early mathematical development Lynne McClure Editor Math Co ordiator's File Mathematics Association In their exceptionally readable and informative book Children's Mathematics Making Marks Making Meaning Carruthers and Worthington 2006 draw attention to one of the main goals of early years teaching that is to help children make links between the mathematics they have already encountered and continue to engage with at home and the more abstract mathematics of the school These authors suggest that by encouraging children to represent mathematical ideas in their own ways and crucially by talking to the pupils about the marks they have made we are given a window onto their thinking that may otherwise be inaccessible Liz Pumphrey NRICH This book draws on the authors many years of teaching children aged three to eight years and also on their extensive research with children in the home nursery and school The authors explain the development and range of young children s mathematical marks and visual representations showing how children make mental connections between their own early marks and subsequent abstract mathematical symbolism and go on to develop their own written methods Combining theory

and practice this acclaimed book demonstrates how children's own mathematical graphics are highly creative and show deep levels of thinking The authors show how this is the key to success in school mathematics and to higher levels of achievement The authors are winners of TACTYC's 2003 Jenefer Joseph Award for the Creative Arts 3 8 awarded for their innovative work with children on mathematical graphics
