

Surface chemistry

- Surface chemistry focuses on the processes that occur at the interfaces of different phases, such as solid-liquid or liquid-gas
- It explores how molecules act at these surfaces, including adsorption, where molecules adhere to surfaces, and catalysis, which speeds up chemical reactions
- This field is vital in developing catalysts, detergents, and coatings
- Understanding surface chemistry is crucial for innovations in materials science and environmental protection

Practical example: Cosmetics

- Surface chemistry plays a crucial role in the effectiveness of cosmetics
- It influences how ingredients interact on the skin's surface, affecting product stability and performance
- For example, the emulsification process, crucial in creams and lotions, relies on the principles of surface chemistry to mix oil and water-based components
- This ensures that cosmetics provide a uniform effect, enhancing appearance and feel on the skin

F. Danielli, K. G. A. Pankhurst, A. C. Riddiford, 2013-10-22 *Recent Progress in Surface Science Volume 1* reviews significant advances made in surface science during the period 1956-1961 as well as problems that are still unsolved Topics covered range from surface viscosity and electrode processes to corrosion of metals surface active substances and foams and free liquid films The electrical double layer and electrokinetic phenomena are also examined along with facilitated diffusion and the chemistry of the semiconductor surface Comprised of 11 chapters this volume first deals with surface viscosity and general principles and applications of surface rheology as well as the viscosity of various types of monolayers The reader is then introduced to foams and free liquid films with emphasis on the theory of foaming the electrical double layer and electrokinetic phenomena and electrode processes Subsequent chapters explore the corrosion of metals surface active substances surface chemistry of compound and organic semiconductors and the mechanism of facilitated diffusion The book also considers the morphology and dynamic aspects of cell contacts before concluding with an analysis of the formation and properties of bimolecular lipid membranes This book will be of interest to chemists and physicists *Surfactants from Renewable Resources* Mikael Kjellin, Ingegärd Johansson, 2010-01-26 Most modern surfactants are readily biodegradable and exhibit low toxicity in the aquatic environment the two criteria for green surfactants However the majority are synthesised from petroleum so over the past decade the detergent industry has turned its attention to developing greener routes to create these surfactants via renewable building blocks *Surfactants from Renewable Resources* presents the latest research

and commercial applications in the emerging field of sustainable surfactant chemistry with emphasis on production technology surface chemical properties biodegradability ecotoxicity market trends economic viability and life cycle analysis Reviewing traditional sources for renewable surfactants as well as recent advances this text focuses on techniques with potential for large scale application Topics covered include Renewable hydrophobes from natural fatty acids and forest industry by products Renewable hydrophiles from carbohydrates amino acids and lactic acid New ways of making renewable building blocks ethylene from renewable resources and complex mixtures from waste biomass Biosurfactants Surface active polymers This book is a valuable resource for industrial researchers in companies that produce and use surfactants as well as academic researchers in surface and polymer chemistry sustainable chemistry and chemical engineering
