Surfaces Of Sense:

Biological Series, 1921 List of contents in most volumes *Gilles Deleuze and Poetics* Ja-Sung Oh, 2014-07-15 This book introduces a revolutionary poetics based on the philosophy of Gilles Deleuze the most famous contemporary philosopher. He overturns the traditional metaphysics and aesthetics. This book develops Deleuze's deep insight and vision into the new world of life, literature, and art. He is very friendly to modern and contemporary literature and art which make the inaudible audible, the invisible visible. Transversing his major works, this book presents unique poetics overturning all the traditional poetics including Aristotle's poetics, Romanticism's poetics, Formalism and Structuralism's poetics. contents: 1 Antilogos and poem 2 Sign and poem 3 Multiplicity and poem 4 Singularity and poem 5 Ritornello and poem **The Italian Renaissance**

Palace Façade Charles Burroughs, 2002-06-17 The architectural facade, a crucial and ubiquitous element of traditional cityscapes, addresses and enhances the space of the city while displaying or disassembling interior arrangements. Burroughs traces the development of the Italian Renaissance palace facade as a cultural, architectural, and spatial phenomenon and as a new way of setting a limit to and defining a private sphere. He draws on literary evidence and analyses of significant Renaissance buildings, noting the paucity of explicit discussion of the theme in an era of extensive architectural publishing.

LeRon Shults, 2015-02-12 F. Multivarifolds, and the Plateau Problem A. T. Fomenko, 1991-02-21 Plateau's problem is a scientific trend in modern mathematics that unites several different problems connected with the study of minimal surfaces. In its simplest version, Plateau's problem is concerned with finding a surface of least area that spans a given fixed one-dimensional contour in three-dimensional space. Perhaps the best known example of such surfaces is provided by soap films. From the mathematical point of view, such films are described as solutions of a second-order partial differential equation, so their behavior is quite complicated and has still not been thoroughly studied. Soap films or more generally interfaces between physical media in equilibrium arise in many applied problems in chemistry, physics, and also in nature. In applications, one finds not only two-dimensional but also multidimensional minimal surfaces that span fixed closed contours in some multidimensional Riemannian space. An exact mathematical statement of the problem of finding a surface of least area or volume requires the formulation of definitions of such fundamental concepts as a surface, its boundary, minimality of a surface, and so on. It turns out that there are several natural definitions of these concepts which permit the study of minimal surfaces by different and complementary methods. In the framework of this comparatively small book, it would be almost impossible to cover all aspects of the modern problem of Plateau, to which a vast literature has been devoted. However, this book makes a unique contribution.

to this literature for the authors guiding principle was to present the material with a maximum of clarity and a minimum of formalization Chapter 1 contains historical background on Plateau s problem referring to the period preceding the 1930s and a description of its connections with the natural sciences This part is intended for a very wide circle of readers and is accessible for example to first year graduate students The next part of the book comprising Chapters 2 5 gives a fairly complete survey of various modern trends in Plateau s problem This section is accessible to second and third year students specializing in physics and mathematics The remaining chapters present a detailed exposition of one of these trends the homotopic version of Plateau s problem in terms of stratified multivarifolds and the Plateau problem in homogeneous symplectic spaces This last part is intended for specialists interested in the modern theory of minimal surfaces and can be used for special courses a command of the concepts of functional analysis is assumed

Deleuze Beyond Badiou Clayton Crockett,2013-01-22 First published in 1997 Alain Badiou s Deleuze The Clamor of Being cast Gilles Deleuze as a secret philosopher of the One In this work Clayton Crockett rehabilitates Deleuze s position within contemporary political and philosophical thought advancing an original reading of the thinker s major works and a constructive conception of his philosophical ontology Through close readings of Deleuze s *Difference and Repetition* *Capitalism and Schizophrenia* with Felix Guattari and *Cinema 2* Crockett argues that Deleuze is anything but the austere quietistic and aristocratic intellectual Badiou had portrayed Instead Crockett underscores Deleuze s radical aesthetics and innovative scientific political and mathematical forms of thought He also refutes the notion Deleuze retreated from politics toward the end of his life Using Badiou s critique as a foil Crockett maintains the profound continuity of Deleuze s work and builds a general interpretation of his more obscure formulations
