## **Surfactant Aggregation:**

*Surfactant Aggregation* J.H. Clint,2012-12-06 Surface Active Agents surfactants are vital components in biological systems form key ingredients in consumer products and play an important role in many industrial processes For example cell membranes owe their structure to the aggregation of surfactants known as lipids which form a major component of the membrane Other natural surfactants occur in the digestive system in the lungs and even in such substances as crude oil Man made surfactants are used in a wide range of domestic and industrial products and processes In addition to detergents and personal care products surfactants have found uses in almost every branch of the chemical industry as well as in several other industries These include dyestuffs fibres mineral processing oil field chemicals paints pesticides pharmaceuticals and plastics Surfactants are versatile materials which are manufactured in a huge variety of forms to suit all of these applications As a result of their importance the technical literature on all aspects of surfactant behaviour is now very extensive

Surprisingly however the treatment in textbooks has been somewhat fragmented often in the form of conference proceedings or edited multi authored works both lacking in continuity

### *Surfactant Aggregation* John H.

Clint,1992 Surface active agents surfactants occur widely in nature being found in locations as different as the membranes of living cells and in crude oil Compounds in this class are surface active because of their amphiphilic nature A consequence of this is that they have a remarkable tendency to aggregate in a variety of forms whose exact structures depend on the state of solvency and on some simple but at times subtle geometric packing considerations

Kazarinov, 2012-12-06 Studies on the electrochemical processes at the interface between two immiscible liquids began a long time ago they date back to the end of the last century Such celebrated scientists as Nemst and Haber and also young A N Frumkin were among those who originated this science Later A N Frumkin went a long way in furthering the studies at the Institute of Electrochemistry The theory of the appearance of potential in a system of two immiscible electrolytes was developed and experimentally verified before the beginning of the thirties In later years the studies in this area considerably lagged behind those conducted at metal electrodes which were widely used in different

industries In the past 15 years however the situation has radically changed and we have witnessed a drastic increase in the number of publications on the electrochemistry of immiscible electrolytes We are glad to note that the investigations show not only a quantitative but also a qualitative change The theoretical works on the oil water interface test not only the thermodynamic aspects of the interface but also recreate the molecular picture of the process Along with the now conventional oilwater system electrochemical studies are made on various membranes including the finest bilayer lipid membranes and also on microemulsion systems A prominent place in the investigation of the oil water interface is occupied by photoprocesses that come into play at the interface between two ionic conductors
