days market custom formulated surfactants are offered for a wide range of applications The need for surfactants in detergents cleaning agents cosmetics toiletries is second only to an expanding demand in industrial applications But even within the non industrial areas the demands have undergone significant changes in recent years For example washing and cleaning temperatures have substantially decreased with increased energy conservation attitudes and more stringent regulatory requirements in the area of ecology and toxicology are leading to new product profiles New manufacturing technologies and an increased utilization of natural raw materials also factor into this continuing evolution These changes and trends have been described in numerous publications However a summary and survey of these developments is currently missing The book presented here *Surfactants in Consumer Products* is intended to close this gap The editor and authors dedicate this work to Dr Dr h c Konrad Henkel on the occasion of his 70th birthday Dr Henkel himself a scientist and industrialist contributed significantly to developments in the surfactant field In the nineteen fifties he initiated the change from soap based detergents to synthetic detergents within Henkel At the same time dishwashing detergents utilizing various synthetic surfactants were also developed and became the basis for modern manual and mechanical dishwashing      Recent

### **Chemistry and Technology of Surfactants** Richard J.

Farn, 2008-04-15 Surfactants are used throughout industry as components in a huge range of formulated products or as effect chemicals in the production or processing of other materials. A detailed understanding of the basis of their activity is required by all those who use surfactants yet the new graduate or postgraduate chemist or chemical engineer will generally have little or no experience of how and why surfactants work. Chemistry Technology of Surfactants is aimed at new graduate or postgraduate level chemists and chemical engineers at the beginning of their industrial careers and those in later life who become involved with surfactants for the first time. The book is a straightforward and practical survey of the chemistry of surfactants and their uses providing a basic introduction to surfactant theory, information on the various types of surfactant and some application details. This will allow readers to build on their scientific education, the concepts and principles on which the successful use of surfactants across a wide range of industries is based.

### **Surfactants and Detergents** Ashim Dutta, 2022-09-28

Surfactants are ubiquitous and have applications in diverse areas including food, cosmetics, detergents, lubricants, enhanced oil recovery (EOR) and targeted drug delivery systems. Their wide diversity of applications owes to their unique structure, namely a hydrophilic and a hydrophobic group present in the same molecule. Although most surfactants used industrially are synthetic, there is a growing need for natural surfactants as the latter are obtainable from renewable sources and are less toxic and highly biodegradable in contrast to their synthetic counterparts. This book is a compilation of interesting articles by various experts that cover various applications of both synthetic and natural surfactants.
