The Gelfand Mathematical Seminars, 1993-1995 I.M. Gelfand,James Lepowsky,Mikhail M. Smirnov,2012-12-06 The Seminar has taken place at Rutgers University in New Brunswick New Jersey since 1990 and it has become a tradition starting in 1992 that the Seminar be held during July at IHES in Bures sur Yvette France This is the second Gelfand Seminar volume published by Birkhauser the first having covered the years 1990 1992 Most of the papers in this volume result from Seminar talks at Rutgers and some from talks at IHES In the case of a few of the papers the authors did not attend but the papers are in the spirit of the Seminar This is true in particular of V Arnold s paper He has been connected with the Seminar for so many years that his paper is very natural in this volume and we are happy to have it included here We hope that many people will find something of interest to them in the special diversity of topics and the uniqueness of spirit represented here The publication of this volume would be impossible without the devoted attention of Ann Kostant We are extremely grateful to her I Gelfand J Lepowsky M Smirnov Questions and Answers About Geometric Evolution Processes and Crystal Growth Fred Almgren We discuss evolutions of solids driven by boundary curvatures and crystal growth with Gibbs Thomson curvature effects Geometric measure theoretic techniques apply both to smooth elliptic surface energies and to non differentiable crystalline surface energies *Algebras, Rings And Their Representations - Proceedings Of The International Conference On Algebras, Modules And Rings* Alberto Facchini,Kent Fuller,Claus M Ringel,Catarina Santa-clara,2006-02-20 Surveying the most influential developments in the field this proceedings reviews the latest research on algebras and their representations commutative and non commutative rings modules conformal algebras and torsion theories The volume collects stimulating discussions from world renowned names including Tsit Yuen Lam Larry Levy Barbara Osofsky and Patrick Smith *Higher Homotopy Structures in Topology and Mathematical Physics* James D. Stasheff,John McCleary,1999 Since the work of Stasheff and Sugawara in the 1960s on recognition of loop space structures on H spaces the notion of higher homotopies has grown to be a fundamental organizing principle in homotopy theory differential graded homological algebra and even mathematical physics This book presents the proceedings from a conference held on the occasion of Stasheff s 60th birthday at Vassar in June 1996 It offers a collection of very high quality papers and includes some fundamental essays on topics that open new areas **Empowering Novel Geometric Algebra for Graphics and Engineering** Eckhard Hitzer,George Papagiannakis,Petr Vasik,2023-04-26 This book constitutes the proceedings of the Workshop Empowering Novel Geometric Algebra for Graphics and Engineering ENGAGE 2022 held in conjunction with Computer Graphics International conference CGI 2022 which took place virtually in September 2022 The 10 full papers included in this volume were carefully reviewed and selected from 12 submissions The workshop focused specifically on important aspects of geometric algebra including algebraic foundations digitized transformations orientation conic fitting protein modelling digital twinning and multidimensional signal processing **Mathematical Reviews** ,2001 *The Moduli*

Space of $N=1$ Superspheres with Tubes and the Sewing Operation Katrina Barron, 2003 Within the framework of complex supergeometry and motivated by two dimensional genus zero holomorphic $N=1$ superconformal field theory this book defines the moduli space of $N=1$ genus zero super Riemann surfaces with oriented and ordered half infinite tubes modulo superconformal equivalence

Advances in Topological Quantum Field Theory John M. Bryden, 2007-09-27 This volume is the conference proceedings of the NATO ARW during August 2001 at Kananaskis Village Canada on New Techniques in Topological Quantum Field Theory This conference brought together specialists from a number of different fields all related to Topological Quantum Field Theory The theme of this conference was to attempt to find new methods in quantum topology from the interaction with specialists in these other fields The featured articles include papers by V Vassiliev on combinatorial formulas for cohomology of spaces of Knots the computation of Ohtsuki series by N Jacoby and R Lawrence and a paper by M Asaeda and J Przytycki on the torsion conjecture for Khovanov homology by Shumakovitch Moreover there are articles on more classical topics related to manifolds and braid groups by such well known authors as D Rolfsen H Zieschang and F Cohen

Formal Power Series and Algebraic Combinatorics Daniel Krob, Alexander A. Mikhalev, Alexander V. Mikhalev, 2013-03-09 This book contains the extended abstracts presented at the 12th International Conference on Power Series and Algebraic Combinatorics FPSAC 00 that took place at Moscow State University June 26-30 2000 These proceedings cover the most recent trends in algebraic and bijective combinatorics including classical combinatorics combinatorial computer algebra combinatorial identities combinatorics of classical groups Lie algebra and quantum groups enumeration symmetric functions young tableaux etc

Solitons, Geometry, and Topology: On the Crossroad V. M. Buchstaber, Sergei Petrovich Novikov, 1997

Lectures on the Topology of 3-Manifolds Nikolai Saveliev, 2011-12-23 Progress in low dimensional topology has been very quick in the last three decades leading to the solutions of many difficult problems Among the earlier highlights of this period was Casson's invariant that was instrumental in proving the vanishing of the Rohlin invariant of homotopy 3 spheres The proof of the three dimensional Poincaré conjecture has rendered this application moot but hardly made Casson's contribution less relevant in fact a lot of modern day topology including a multitude of Floer homology theories can be traced back to his invariant The principal goal of this book now in its second revised edition remains providing an introduction to the low dimensional topology and Casson's theory it also reaches out when appropriate to more recent research topics The book covers some classical material such as Heegaard splittings Dehn surgery and invariants of knots and links It then proceeds through the Kirby calculus and Rohlin's theorem to Casson's invariant and its applications and concludes with a brief overview of recent developments The book will be accessible to graduate students in mathematics and theoretical physics familiar with some elementary algebraic and differential topology including the fundamental group basic homology theory transversality and Poincaré duality on manifolds
