The Race to Commercialize

Biotechnology Steven Collins, 2004-07-31 This comparative study looks at the early development of biotechnology in the US and Japan Drawing on primary and secondary sources it traces the historical roots of recombinant DNA technology discusses the tensions between regulation and promotional policies and identifies the major actors and strategies that launched biotechnology in both countries Developing several strands of theory in economic history science and technology policy the book proposes a simple model that relates the differences in the two countries responses to variations in the availability of institutional financial and organizational resources needed to commercialize the new technology

The Recombinant

University Doogab Yi, 2015-03-23 The advent of recombinant DNA technology in the 1970s was a key moment in the history of both biotechnology and the commercialization of academic research Doogab Yi s *The Recombinant University* draws us deeply into the academic community in the San Francisco Bay Area where the technology was developed and adopted as the first major commercial technology for genetic engineering In doing so it reveals how research patronage market forces and legal developments from the late 1960s through the early 1980s influenced the evolution of the technology and reshaped the moral and scientific life of biomedical researchers Bay Area scientists university administrators and government officials were fascinated by and increasingly engaged in the economic and political opportunities associated with the privatization of academic research Yi uncovers how the attempts made by Stanford scientists and administrators to demonstrate the

relevance of academic research were increasingly mediated by capitalistic conceptions of knowledge medical innovation and the public interest Their interventions resulted in legal shifts and moral realignments that encouraged the privatization of academic research for public benefit The Recombinant University brings to life the hybrid origin story of biotechnology and the ways the academic culture of science has changed in tandem with the early commercialization of recombinant DNA technology

The Scientific Life Steven Shapin, 2009-08-01 Who are scientists What kind of people are they What capacities and virtues are thought to stand behind their considerable authority They are experts indeed highly respected experts authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit But are they morally different from other people The Scientific Life is historian Steven Shapin's story about who scientists are who we think they are and why our sensibilities about such things matter Conventional wisdom has long held that scientists are neither better nor worse than anyone else that personal virtue does not necessarily accompany technical expertise and that scientific practice is profoundly impersonal Shapin however here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work From the early twentieth century origins of corporate research laboratories to the high flying scientific entrepreneurship of the present Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live Building on the insights of Shapin's last three influential books featuring an utterly fascinating cast of characters and brimming with bold and original claims The Scientific Life is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped

Career Imprints Monica C. Higgins, 2005-04-07 Based on her research of 800 biotechnology companies and 3 200 biotechnology executives Harvard Business School professor Monica Higgins discovered that one firm Baxter was the breeding ground for today's most successful biotechnology ventures This phenomena of one organization spawning an industry has also been seen in the high tech Hewlett Packard and semiconductor industries Fairchild However until now there has been no suitable explanation of why and how these organizations were able to create the next generation of industry leaders Career Imprints shows why Baxter was so successful in spawning senior executives and offers an understanding of what it takes for an organization to produce leaders that will dominate an industry for years to come In this important book Higgins shows that an organization's career imprint³ 4the result of company systems structure strategy and culture³ 4that employees take with them throughout their careers is the key to creating great leaders By understanding these factors staff human resource executives and CEOs can analyze their own organization's career imprint and develop leaders
