Communications Policy in Transition Benjamin M. Compaine, Shane M. Greenstein, 2001 A collection of research reports on policy issues involving telecommunications particularly the Internet Until the 1980s it was presumed that technical change in most communications services could easily be monitored from centralized state and federal agencies This presumption was long outdated prior to the commercialization of the Internet With the Internet the long forecast convergence of voice video and text bits became a reality Legislation capped by the Telecommunications Act of 1996 created new quasi standards such as fair and reasonable for the FCC and courts to apply leading to nonstop litigation and occasional gridlock This book addresses some of the many telecommunications areas on which public policy makers corporate strategists and social activists must reach agreement Topics include the regulation of access Internet architecture in a commercial era communications infrastructure development the Digital Divide and information policy issues such as intellectual property and the retransmission of TV programming via the Internet

Regulation and the Performance of Communication and Information Networks Gerald R. Faulhaber, Gary Madden, Jeffrey Petchey, 2012-01-01 Due to their economic characteristics and also to their consequences on many aspects of collective life information networks have always been at the edge of regulatory innovations and at the center of policy debates The contributors of this volume combine long term visions of the factors determining regulatory policies with up to date analyses of technicalities to be dealt with to provide the reader with an extended understanding of the issues and constraints shaping the future of digital networks Eric Brousseau Universit Paris Dauphine France and the European University Institute Italy Digital markets worldwide are in rapid flux The Internet and World Wide Web have traditionally evolved in a largely deregulated environment but recently governments have shown great interest in this rapidly developing sector and are imposing regulations for a variety of reasons that are changing the shape of these industries This book explores why the industrial organization of broadband ISPs Internet backbone providers and content application providers are in such turmoil The expert contributors straddle the turbulent past of the telecoms sector and also contribute to its exciting though unpredictable future via positive analysis of past communications policies which is then utilized to deduce lessons to guide future policy making decisions It is illustrated that broadband ISPs no longer simply provide a conduit for service delivery they are also involved in producing content and transaction services themselves in competition with content and delivery providers The blurring of the traditional lines between these three sectors as each enters into the others markets is highlighted The conclusion is that we are witnessing the emergence of powerful competing platforms linked in complex ways that challenge traditional economic analyses Exploring governance issues regulation and investment next generation service markets and wireless communication this book will prove a fascinating and illuminating read for scholars researchers post graduate students and policymakers with an interest in ICT technology and innovation economics and industrial organization

Who Controls the Internet? Jack Goldsmith, Tim Wu, 2006-03-17 Is the Internet erasing national borders Will the future of the Net be set by Internet engineers rogue programmers the United Nations or powerful countries Who s really in control of what s happening on the Net In this provocative new book Jack Goldsmith and Tim Wu tell the fascinating story of the Internet s challenge to governmental rule in the 1990s and the ensuing battles with governments around the world It s a book about the

fate of one idea that the Internet might liberate us forever from government borders and even our physical selves We learn of Google s struggles with the French government and Yahoo s capitulation to the Chinese regime of how the European Union sets privacy standards on the Net for the entire world and of eBay s struggles with fraud and how it slowly learned to trust the FBI In a decade of events the original vision is uprooted as governments time and time again assert their power to direct the future of the Internet The destiny of the Internet over the next decades argue Goldsmith and Wu will reflect the interests of powerful nations and the conflicts within and between them While acknowledging the many attractions of the earliest visions of the Internet the authors describe the new order and speaking to both its surprising virtues and unavoidable vices Far from destroying the Internet the experience of the last decade has lead to a quiet rediscovery of some of the oldest functions and justifications for territorial government While territorial governments have unavoidable problems it has proven hard to replace what legitimacy governments have and harder yet to replace the system of rule of law that controls the unchecked evils of anarchy While the Net will change some of the ways that territorial states govern it will not diminish the oldest and most fundamental roles of government and challenges of governance Well written and filled with fascinating examples including colorful portraits of many key players in Internet history this is a work that is bound to stir heated debate in the cyberspace community **Journal of Scientific and Industrial Research** ,2001 *Meeting of Board of Regents* University of Michigan.
