The Intimate Machine Neil Frude, 1984-08-07 *Sex/Machine* Patrick D. Hopkins, 1998 As powerful interacting social and physical forces gender and technology shape our experiences cultures and identities sometimes in such comfortable and subtle ways that it takes effort to appreciate them sometimes in such conspicuous and explosive ways that everyone recognizes their importance Delving into these issues is an opportunity to discover how technology promises or threatens to rewrite our ideas about sex sexuality and gender identity **The Creation of a Conscious Machine** Jean

Tardy, 2023-12-15 Describes seven novel variations of the Turing test Outlines an original definition of consciousness described as implementable specifications Introduces the concept of Mathematics as a genetically transmissible cognitive medium This book presents a groundbreaking journey into the world of Generative AI technology and offers an in depth look at the prospect of AI achieving consciousness The book navigates through various historical and modern perspectives on AI from ancient myths to the Turing Test to the latest in technological advancements It covers the theoretical and practical aspects of creating a conscious AI including the specifications for synthetic consciousness and the integration of AI with human cognition The book questions whether generative AI can meet the traditional criteria of consciousness and how this might be realized **The Plot Machine** Kai Mikkonen, 2001 This book presents a new and exciting theory of the modern

French novel by developing the notion of the narrative as a textual machine Many turn of the century French novels thematically identified their means of narration through the various machines that they depicted The narrative devices that were particularly important in this self reflection included the temporal order of the plot the question of a narrative s beginning and end the hierarchy of narrative voices and the techniques of the point of view The question of mechanization became central on all these fronts Has the novel become automated or machine like At the same time the machine metaphors in the novels of Alfred Jarry Emile Zola Jules Verne Villiers de l Isle Adam Raymond Roussel combined the question of the narrative form with new ways to think about man s relationship with technology and the cultural environment The early modernist texts drew upon contradictory notions of technological promise and threat while they also depicted new forms of identity and behavior related to or modeled after machines These texts highlighted cultural assumptions concerning technological innovations and critiqued mainly through parody and through various figures of man machine fusion the positivistic belief in progress Such writers looked for evidence of advanced forms of consciousness arising out of encounters with new technology such as telephones trains bicycles telegraphy phonographs and electricity This volume will be of interest to anyone working in the field of modern French literary and cultural history It will especially appeal to anyone intrigued with the origins of the modernist novel the history of narrative forms and the question of how the experience of new technology may be portrayed in literary texts **Thinking Like a Machine** Niki Passath, 2017-10-10 In many modes of behavior people act more and more like machines In the context of work people have become a human resource that can be

replaced at any time An existence without purpose cannot be imagined just as a machine without function is absurd Do humans already think like machines Do they have a master slave relationship with them Are humans no longer any more than an organic prosthetic fitted to an inorganic body With his created robotic beings Niki Passath breaks with this seemingly rational technological system By eliminating the predominant rationality of the machine he gives it a new meaning This book is the first monograph on the artist s oeuvre Internationally renowned experts shed light on the many facets of his work

The Seductive Computer Derek Partridge,2010-10-28 IT systems explode budget estimates bust production deadlines by years and then fail to work properly Why this IT system crisis Poor programmers Inadequate project management No The Seductive Computer argues that the fundamental nature of programming technology itself is the real culprit it promises perfection but can only deliver emergent chaos It is also an insidiously compelling technology peculiarly male oriented IT systems an unavoidable and increasing reality in all our lives are something new to man large scale discrete complexity The Seductive Computer explains this novelty that defies human understanding This book illustrates in a simple yet thorough manner the underlying concepts necessary for understanding the IT system crisis not How To Program but what the demands of programming are It then proceeds to lay out the full gamut of issues all stemming from the nature of the technology From development to maintenance IT system personnel are grappling with incipient chaos The technicians are seduced by the

detailed challenge of the technology The scientists are seduced by the promises of their technology The managers and users are seduced by the mysteries of the technology No IT system is ever fully understood by anyone so surprising behaviours will always emerge What can be done We must rein in our expectations of IT systems what they can do and how reliably they can do it On the positive side The Seductive Computer discusses novel paradigms that look beyond the current discrete technology neural computing and precise approximation computing
