The Machine:

A History of the Machine-wrought Hosiery and Lace Manufactures William Felkin, 1867 *An Anthropology of the Machine* Michael Fisch, 2018-06-19 An astute account of Tokyo's commuter train network and an intellectually stimulating invitation to rethink the interaction between humans and machines Japan Forum With its infamously packed cars and disciplined commuters Tokyo's commuter train network is one of the most complex technical infrastructures on Earth In *An Anthropology of the Machine* Michael Fisch provides a nuanced perspective on how Tokyo's commuter train network embodies the lived realities of technology in our modern world Drawing on his fine grained knowledge of transportation work and everyday life in Tokyo Fisch shows how fitting into a system that operates on the extreme edge of sustainability can take a physical and emotional toll on a community while also creating a collective way of life one with unique limitations and possibilities *An Anthropology of the Machine* is a creative ethnographic study of the culture history and experience of commuting in Tokyo At the same time it is a theoretically ambitious attempt to think through our very relationship with technology and our possible ecological futures Fisch provides an unblinking glimpse into what it might be like to inhabit a future in which more and more of our infrastructure and the planet itself will have to operate beyond capacity to accommodate our ever growing population Not a rage against the machine but an urge to find new ways of coexisting with technology Contemporary Japan An extraordinary study *Ethnos* A fascinating in depth account of the innovations inventions sacrifices and creativity required to ensure Tokyo's millions of commuters keep rolling It also provides much food for thought as our transportation systems become increasingly reliant on automated technology Pacific Affairs *The Machine Question* David J. Gunkel, 2017-09-08 An investigation into the assignment of moral responsibilities and rights to intelligent and autonomous machines of our own making One of the enduring concerns of moral philosophy is deciding who or what is deserving of ethical consideration Much recent attention has been devoted to the animal question consideration of the moral status of nonhuman animals In this book David Gunkel takes up the machine question whether and to what extent intelligent and autonomous machines of our own making can be considered to have legitimate moral responsibilities and any legitimate claim to moral consideration The machine question poses a fundamental challenge to moral thinking questioning the traditional philosophical conceptualization of technology as a tool or instrument to be used by human agents Gunkel begins by addressing the question of machine moral agency whether a machine might be considered a legitimate moral agent that could be held responsible for decisions and actions He then approaches the machine question from the other side considering whether a machine might be a moral patient due legitimate moral consideration Finally Gunkel considers some recent innovations in moral philosophy and critical theory that complicate the machine question deconstructing the binary agent patient opposition itself Technological advances may prompt us to wonder if the science fiction of computers and robots whose actions affect their human companions think of HAL in 2001 A Space Odyssey could become science fact Gunkel's

argument promises to influence future considerations of ethics ourselves and the other entities who inhabit this world
