The Magnitude and Sources of Disagreement Among Gun Policy Experts, Second Edition Rosanna Smart,Andrew R. Morral,Terry L. Schell,2021-11-30 This report describes combined results from two fieldings of a survey of gun policy experts designed to identify areas of agreement and whether disagreements stem from assumptions about the policies effects or from differences in policy objectives **Limiting the Magnitude of Future Climate Change** National Research Council,Division on Earth and Life Studies,Board on Atmospheric Sciences and Climate,America's Climate Choices: Panel on Limiting the Magnitude of Climate Change,2011-01-06 Climate change driven by the increasing concentration of greenhouse gases in the atmosphere poses serious wide ranging threats to human societies and natural ecosystems around the world The largest overall source of greenhouse gas emissions is the burning of fossil fuels The global atmospheric concentration of carbon dioxide the dominant greenhouse gas of concern is increasing by roughly two parts per million per year and the United States is currently the second largest contributor to global emissions behind China Limiting the Magnitude of Future Climate Change part of the congressionally requested America s Climate Choices suite of studies focuses on the role of the United States in the global effort to reduce greenhouse gas emissions The book concludes that in order to ensure that all levels of government the private sector and millions of households and individuals are contributing to shared national goals the United States should establish a budget that sets a limit on total domestic greenhouse emissions from 2010 2050 Meeting such a budget would require a major departure from business as usual in the way the nation produces and uses energy and that the nation act now to aggressively deploy all available energy efficiencies and less carbon intensive technologies and to develop new ones With no financial incentives or regulatory pressure the nation will continue to rely upon and lock in carbon intensive technologies and systems unless a carbon pricing system is established either cap and trade a system of taxing emissions or a combination of the two Complementary policies are also needed to accelerate progress in key areas developing more efficient less carbon intense energy sources in electricity and transportation advancing full scale development of new generation nuclear power carbon capture and storage systems and amending emissions intensive energy infrastructure Research and development of new technologies that could help reduce emissions more cost effectively than current options is also strongly recommended *Analysis of the Magnitude and Frequency of Floods in Colorado* Jerry E.
