The Gelfand Mathematical Seminars, 1996-1999 Israel M. Gelfand, Vladimir S Retakh, 2014-01-15 **The Gelfand Mathematical Seminars, 1996-1999** Vladimir S. Retakh, **The Gelfand Mathematical Seminars, 1993-1995** I.M. Gelfand, James Lepowsky, Mikhail Smirnov, 1996-06-01 The Seminar has taken place at Rutgers University in New Brunswick New Jersey since 1990 and it has become a tradition starting in 1992 that the Seminar be held during July at IHES in Bures sur Yvette France This is the second Gelfand Seminar volume published by Birkhauser the first having covered the years 1990 1992 Most of the papers in this volume result from Seminar talks at Rutgers and some from talks at IHES In the case of a few of the papers the authors did not attend but the papers are in the spirit of the Seminar This is true in particular of V Arnold's paper He has been connected with the Seminar for so many years that his paper is very natural in this volume and we are happy to have it included here We hope that many people will find something of interest to them in the special diversity of topics and the uniqueness of spirit represented here The publication of this volume would be impossible without the devoted attention of Ann Kostant We are extremely grateful to her I Gelfand J Lepowsky M Smirnov Questions and Answers About Geometric Evolution Processes and Crystal Growth Fred Almgren We discuss evolutions of solids driven by boundary curvatures and crystal growth with Gibbs Thomson curvature effects Geometric measure theoretic techniques apply both to smooth elliptic surface energies and to non differentiable crystalline surface energies **The Gelfand Mathematical Seminars, 1996-1999** Israel M. Gelfand, Vladimir S. Retakh, 2012-12-06 Dedicated to the memory of Chih Han Sah this volume continues a long tradition of one of the most influential mathematical seminars of this century A number of topics are covered including combinatorial geometry connections between logic and geometry Lie groups algebras and their representations An additional area of importance is noncommutative algebra and geometry and its relations to modern physics Distinguished mathematicians contributing to this work T V Alekseevskaya V Kac *The Gelfand Mathematical Seminars, 1996-1999* Izrail' Moiseevich Gel'fand, 2000 *The Gelfand Mathematical Seminars* James Lepowsky, 1993

Expository Lectures on Representation Theory Kiyoshi Igusa, Alex Martsinkovsky, Gordana Todorov, 2014-01-16 This volume contains the proceedings of the Maurice Auslander Distinguished Lectures and International Conference held April 25 30 2012 in Falmouth MA The representation theory of finite dimensional algebras and related topics especially cluster combinatorics is a very active topic of research This volume contains papers covering both the history and the latest developments in this topic In particular Otto Kerner gives a review of basic theorems and latest results about wild hereditary algebras Yuri Berest develops the theory of derived representation schemes and Markus Schmidmeier presents new applications of arc diagrams **Conférence Moshé Flato 1999** Giuseppe Dito, Daniel Sternheimer, 2000-07-31 These two volumes constitute the Proceedings of the Conference Mosh Flato 1999 Their spectrum is wide but the various areas covered are in fact strongly interwoven by a common denominator the unique personality and creativity of the scientist in whose

honor the Conference was held and the far reaching vision that underlies his scientific activity With these two volumes the reader will be able to take stock of the present state of the art in a number of subjects at the frontier of current research in mathematics mathematical physics and physics Volume I is prefaced by reminiscences of and tributes to Flato's life and work It also includes a section on the applications of sciences to insurance and finance an area which was of interest to Flato before it became fashionable The bulk of both volumes is on physical mathematics where the reader will find these ingredients in various combinations fundamental mathematical developments based on them and challenging interpretations of physical phenomena Audience These volumes will be of interest to researchers and graduate students in a variety of domains ranging from abstract mathematics to theoretical physics and other applications Some parts will be accessible to proficient undergraduate students and even to persons with a minimum of scientific knowledge but enough curiosity

Representations of Finite Dimensional Algebras and Related Topics in Lie Theory and Geometry Vlastimil Dlab, Claus Michael Ringel, 2004 These proceedings are from the Tenth International Conference on Representations of Algebras and Related Topics ICRA X held at The Fields Institute In addition to the traditional instructional workshop preceding the conference there were also workshops on Commutative Algebra Algebraic Geometry and Representation Theory Finite Dimensional Algebras Algebraic Groups and Lie Theory and Quantum Groups and Hall Algebras These workshops reflect the latest developments and the increasing interest in areas that are closely related to the representation theory of finite dimensional associative algebras Although these workshops were organized separately their topics are strongly interrelated The workshop on Commutative Algebra Algebraic Geometry and Representation Theory surveyed various recently established connections such as those pertaining to the classification of vector bundles or Cohen Macaulay modules over Noetherian rings coherent sheaves on curves or ideals in Weyl algebras In addition methods from algebraic geometry or commutative algebra relating to quiver representations and varieties of modules were presented The workshop on Finite Dimensional Algebras Algebraic Groups and Lie Theory surveyed developments in finite dimensional algebras and infinite dimensional Lie theory especially as the two areas interact and may have future interactions The workshop on Quantum Groups and Hall Algebras dealt with the different approaches of using the representation theory of quivers and species in order to construct quantum groups working either over finite fields or over the complex numbers In particular these proceedings contain a quite detailed outline of the use of perverse sheaves in order to obtain canonical bases The book is recommended for graduate students and researchers in algebra and geometry
