Handbook of Teaching and Learning Persian as a Second Language Hooman Saeli, 2025-09-26. This collection explores relevant pedagogical and sociolinguistic topics in the teaching and learning of Persian as a foreign and second language. Owing to the dearth of research in many areas pertaining to the teaching and learning of Persian, this handbook provides empirically supported insights into various aspects of these areas. While the literature on teaching and learning Persian is growing, the field lacks a cohesive collection on Persian as a foreign second language. The book addresses issues pertaining to the standardization and validation of teaching and assessment methods which remain underexplored in the contexts of teaching and learning Persian. It also covers the teaching of Persian pragmatics, the use of corpora, as well as a range of different areas within linguistics including phonetics, prosody, and historical linguistics. This comprehensive collection contributes substantially to the scientific study of many aspects of teaching and learning Persian which have been neglected for decades. A must-have text in Persian language pedagogy and Persian sociolinguistics, it is an essential book for those in teaching and learning in Persian language programs worldwide.

Tracing the Emergence of Psychology, 1520-1750 Sven Hroar

Klempe,2020-08-25 This book pursues the very first use of the term psychology which is traced back to 1520 The appearance of the term was not as a part of philosophy Thus the main hypothesis of this book is that psychology from the very beginning was a stranger to philosophy It demonstrates that even Aristotle used his thesis on the soul to delineate philosophy from psychological aspects It is therefore suggested that psychological wisdom and knowledge has been retained and in popular culture as long as humans have reflected upon themselves There were however several reasons for why psychology appeared as a part of philosophy at around the year 1600 One important factor was Humanism which among other things had challenged Aristotelian logic Another important movement was Protestantism Luther s emphasis on the need to confess one s sin led to a certain interest to explore the human nature His slogan the scripture alone represented an attack on the close relationship that had existed between theology and philosophy Yet when philosophy was thrown out of theology it was left without the basic theological tenets that had guided philosophical speculations for centuries in Europe Hence this book pursues how philosophy gradually adopts and includes psychological aspects to rebuild the foundation for philosophy This culminates partly with the British empiricists Yet they did not apply the term psychology It was the German and partly ignored philosopher Christian Wolff who opened up modern understanding of psychology with the publication of *Psychologia empirica* in 1732 This publication had a tremendous impact on the enlightenment in the modern Europe
