

Improving fisheries sustainability

State agencies often have less resources than federal agencies, and data limitations represent a critical challenge to fisheries management in the United States

Fisheries Management Index (FMI)

We applied the FMI as a tool to track and evaluate non-federal fisheries management performance, which can help managers prioritize fisheries for management attention

Prioritization → attention → solutions

Management prioritization and partnerships with fishing communities can boost resources and management capabilities, improve data collection, close critical information gaps, and ultimately produce healthier fisheries

60%

of fisheries surveyed are not actively managed

80%

of fisheries surveyed have unknown health status

Matthews, 1975 **Improving the Management of U.S. Marine Fisheries** National Research Council (U.S.). Committee on Fisheries, 1994 Improving the Collection, Management, and Use of Marine Fisheries Data National Research Council, Commission on Geosciences, Environment, and Resources, Ocean Studies Board, 2000-12-10 Congress has promoted fisheries science for over a century and its involvement in fisheries management took a great leap forward with passage of the Fisheries Conservation and Management Act of 1976 In the past decade Congress has requested advice from the National Research Council NRC on both national issues e g individual fishing quotas and community development quotas and the assessments related to specific fisheries Northeast groundfish This report was produced in part in response to another congressional request this time related to the assessments of the summer flounder stocks along the East Coast of the United States Following the initial request the NRC National Marine Fisheries Service NMFS and congressional staff agreed to broaden the study into a more comprehensive review of marine fisheries data collection management and use **Oversight of Marine Fisheries Management** United States. Congress. Senate. National Ocean Policy Study, 1989 Marine Fisheries Ecology Simon Jennings, Michel Kaiser, John D. Reynolds, 2013-04-16 This topical and exciting textbook describes fisheries exploitation biology conservation and management and reflects many recent and important changes in fisheries science These include growing concerns about the environmental impacts of fisheries the role of ecological interactions in determining population dynamics and the incorporation of uncertainty and precautionary principles into management advice The book draws upon examples from tropical temperate and polar environments and provides readers with a broad understanding of the biological economic and social aspects of fisheries ecology and the interplay between them As well as covering classical fisheries science the book focuses on contemporary issues such as industrial fishing poverty and conflict in fishing communities marine reserves the effects of fishing on coral reefs and by catches of mammals seabirds and reptiles The book is primarily written for students of fisheries science and marine ecology but should also appeal to practicing fisheries scientists and those interested in conservation and the impacts of humans on the marine environment particularly useful are the modelling chapters which explain the difficult maths involved in a user friendly manner describes fisheries exploitation conservation and management in tropical temperate and polar environments broad coverage of classical fisheries science emphasis on new approaches to fisheries science and the ecosystem effects of fishing examples based on the latest research and drawn from authors international experience comprehensively referenced throughout extensively illustrated with photographs and line drawings **The Management of Marine Fisheries, by J.A. Gulland** J. A. Gulland, 1974 *Ecosystem Based Management for Marine Fisheries* Andrea Belgrano, Charles W. Fowler, 2011-02-03 Showing how big picture patterns can help overcome the failures of conventional management this book is ideal for students researchers and

professionals involved with marine fisheries It explores not only the current practice of the ecosystem approach to fisheries management but also its critical importance to even larger perspectives The first section gives a valuable overview of how more and more of the complexity of real world systems is being recognized and involved in the management of fisheries around the world The second section then demonstrates how important aspects of real world systems involving population dynamics evolution and behavior remain to be taken into account completely This section also shows how we must change the way we think about our involvement in and the complexity of marine ecosystems The final chapters consider how with the use of carefully chosen macroecological patterns we can take important steps towards more holistic management of marine fisheries

Improving the Use of the "Best Scientific Information Available" Standard in Fisheries Management National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on Defining Best Scientific Information Available for Fisheries Management,2004-09-03

Under the Magnuson Stevens Fisheries Conservation and Management Act FCMA managers are required to use the best scientific information available in the preparation of federal fishery management plans National Standard 2 in the FCMA However the Act provides no further guidance as to how conformance to this standard should be determined Because adherence to this standard has often been contentious Congress has considered adding a definition for what constitutes best scientific information available in the reauthorization of the FCMA This report examines both the current application and the controversy over the standard and concludes that a legislative definition would be too inflexible to accommodate regional differences and future advances in science and technology Instead the report recommends that NOAA Fisheries adopt procedural guidelines to ensure that the scientific information used in the development of fishery management plans is relevant and timely and is the product of processes characterized by inclusiveness transparency and openness timeliness and peer review
