

Skis

Skis are now distinguishable in many types, and your first choice is to take the advice of your instructor or those other skiers before you buy a pair. In general, cross-country or touring skis are narrower and longer, more suited to downhill skis, which are wider and usually not so long as that they have weight.

Skis are now made of plastic and metal as well as wood, and it is good to get a pair that is suitable for your area and the type of skiing you will be doing. Skis for downhill skiing should have metal edges. Most are manufactured that way, but occasionally others are to be found.

Poles

You will need two ski poles, and here again your instructor's advice will be most helpful. Many kinds are available, depending on your needs. Downhill poles are shorter and have a smaller "basket" (the small leather and metal ring at the bottom) than the cross-country poles, which have a larger ring to give more pushing area. Downhill poles should be strong enough to support your weight, and the top of your poles should come to the armpit, when standing on the floor. Of course, they will only come about halfway between belt and armpit when you jab them in the snow.
