Set provides a rich source of methods for analyzing water to assure its safety from natural and deliberate contaminants
including those that are added because of carelessness of human endeavors Human development has great impact on water
quality and new contaminants are emerging every day The issues of sampling for water analysis regulatory considerations
and forensics in water quality and purity investigations are covered in detail Microbial as well as chemical contaminations
from inorganic compounds radionuclides volatile and semivolatile compounds disinfectants herbicides and pharmaceuticals
including endocrine disruptors are treated extensively Researchers must be aware of all sources of contamination and know
how to prescribe techniques for removing them from our water supply Unlike other works published to date that concentrate
on issues of water supply water resource management hydrology and water use by industry this work is more tightly focused
on the monitoring and improvement of the quality of existing water supplies and the recovery of wastewater via new and
standard separation techniques Using analytical chemistry methods offers remediation advice on pollutants and
contaminants in addition to providing the critical identification perspective The players in the global boom of water
purification are numerous and varied Having worked extensively in academia and industry the Editor in Chief has been
