

The background of the entire image is a dark blue. Overlaid on this is a large, stylized graphic of a DNA double helix. The two strands of the helix are represented by thick, light blue lines that twist around each other. Inside the loops of the helix, there are four human figures. Two of these figures are light blue, matching the strands, and are positioned at the top and bottom of the visible helix. The other two figures are magenta and are positioned in the middle loops. All figures are simplified, with a circular head and a rectangular body with outstretched arms.

Social Basis Of Scientific Discoveries:

The Social Basis of Scientific Discoveries Augustine Brannigan, 1981-10-29 What constitutes a scientific discovery How do discoveries happen and how are they recognised as such These are questions of central concern to scientists and philosophers In this book Augustine Brannigan provides a critical examination of the major theories which have been devised to account for discoveries and innovations in science and develops a fresh alternative Dr Brannigan begins by arguing that most theories fall into one of two classes mentalistic theories which describe how ideas come into the mind and cultural theories which describe how they mature in a particular culture His account reveals a series of empirical and methodological problems that make these existing models untenable and he proposes as an alternative a sociological approach which draws attention not to what makes discoveries happen but to the processes whereby certain achievements are recognised and labelled as discoveries This approach is illustrated in detail with a number of important scientific cases The book throws light not only on the conventional character of discoveries but also on the folk elements in popular theories about discovery such as genius gestalt switch and simultaneous invention

Who Owns Knowledge? Bernd Weiler, 2017-09-08 Who Owns Knowledge explores the emerging linkages between the extension of knowledge and the law It anticipates that the legal system will not only be called upon to adjudicate in matters of creative minds but will be expected to do so to an ever increasing degree Linkages between the legal system and knowledge are bound to multiply in modern societies Ironically while increasingly relying on knowledge we are simultaneously investing significant resources into controlling this same knowledge This includes developing a system of legal governance over how knowledge is extended or enlarged Such modes of governance may take the form of regulatory legal codes or legal challenges and judgments that shape the evolution of modern society and potentially transform knowledge itself as a productive force Who Owns Knowledge asks such questions as What is the appropriate balance of public and private interests involved in this process How can creative powers natural resources and indigenous knowledge be protected from either public or private exploitation Does the law have the power to prevent this exploitation or is adaptive technology needed Also in this identity theft conscious age how can the rights of the individual be protected against policies allowing access to any kind of information especially confidential information The editors and contributors demonstrate that the relationship between knowledge and the law needs to be further researched and discussed Who Owns Knowledge is a must read for those interested in the subjects of intellectual property the history and development of modern legal and economic systems and their entanglements and how judicial systems make choices between the legal and economic systems and especially between the public and private good and their often opposing interests

New Trends in the History of Science ,2024-12-09 The One Culture? Jay A. Labinger, Harry Collins, 2010-08-15 So far the Science Wars have generated far more heat than light Combatants from one or the other of what C P Snow famously called the two cultures science versus the arts and humanities have launched bitter attacks but have

seldom engaged in constructive dialogue about the central issues In *The One Culture* Jay A Labinger and Harry Collins have gathered together some of the world's foremost scientists and sociologists of science to exchange opinions and ideas rather than insults The contributors find surprising areas of broad agreement in a genuine conversation about science its legitimacy and authority as a means of understanding the world and whether science studies undermines the practice and findings of science and scientists *The One Culture* is organized into three parts The first consists of position papers written by scientists and sociologists of science which were distributed to all the participants The second presents commentaries on these papers drawing out and discussing their central themes and arguments In the third section participants respond to these critiques offering defenses clarifications and modifications of their positions Who can legitimately speak about science What is the proper role of scientific knowledge How should scientists interact with the rest of society in decision making Because science occupies such a central position in the world today such questions are vitally important Although there are no simple solutions *The One Culture* does show the reader exactly what is at stake in the Science Wars and provides a valuable framework for how to go about seeking the answers we so urgently need Contributors include Constance K Barsky Jean Bricmont Harry Collins Peter Dear Jane Gregory Jay A Labinger Michael Lynch N David Mermin Steve Miller Trevor Pinch Peter R Saulson Steven Shapin Alan Sokal Steven Weinberg Kenneth G Wilson

Descartes-Agonistes John Schuster, 2012-10-23 This book reconstructs key aspects of the early career of Descartes from 1618 to 1633 that is up through the point of his composing his first system of natural philosophy *Le Monde* in 1629-33 It focuses upon the overlapping and intertwined development of Descartes projects in physico mathematics analytical mathematics universal method and finally systematic corpuscular mechanical natural philosophy The concern is not simply with the conceptual and technical aspects of these projects but with Descartes agendas within them and his construction and presentation of his intellectual identity in relation to them Descartes technical projects agendas and senses of identity shifted over time entangled and displayed great successes and deep failures as he morphed from a mathematically competent Jesuit trained graduate in neo Scholastic Aristotelianism to aspiring prophet of a systematised corpuscular mechanism passing through stages of being a committed physico mathematicus advocate of a putative universal mathematics and projector of a grand methodological dream In all three dimensions projects agendas and identity concerns the young Descartes struggled and contended with himself and with real or virtual peers and competitors hence the title *Descartes Agonistes*

Society and Knowledge Volker Meja, 2017-07-05 The sociology of knowledge is generally seen as part of the sociology of cultural products Along with the sociology of science it explores the social character of science and in particular the social production of scientific knowledge Knowledge in all its varieties is of crucial importance in social political and economic relations in modern society Yet new realities the editors argue in their introduction to this second edition require a new perspective In the past half century the social role of knowledge has changed profoundly The natural attitude toward scientific knowledge in

science that assigned a special status to science's knowledge claims has lost its dominance and the view that all knowledge is socially constructed has gained general acceptance. Science increasingly influences the political agenda in modern societies. Consequently, a new political field has emerged: knowledge politics. These fourteen essays by social scientists, philosophers, and historians cover fundamental issues: theoretical perspectives, knowledge and power, and empirical studies. Eight of the fourteen contributions were part of the first edition of *Society and Knowledge* published in 1984, and most of these have been updated and revised for this new edition. Included in this edition are six new contributions by Robert K. Merton, Steve Fuller, Dick Pels, Nico Stehr, Barry Schwartz, and Michael Lynch. This second revised edition builds on its predecessor in presenting cutting-edge theoretical and empirical efforts to transform the sociology of knowledge. Professionals, policymakers, and graduate students in the fields of sociology, political science, and social science will find this volume of interest and importance.

Routledge History of Philosophy Volume VIII Richard Kearney, 2003-12-23 Continental philosophy as it has emerged in the twentieth century is less a seamless fabric than a patchwork of diverse strands. Phenomenology, hermeneutics, existentialism, structuralism, critical theory, deconstruction: these are some of the salient movements which have developed in continental Europe between 1900 and the 1990s, though their influence is by no means confined to geographic location. Continental thought has proved highly exportable, circulating far beyond the frontiers of Europe to provoke strong responses in the intellectual world at large. The fifteen articles in this volume outline and assess some of the issues and experiments of continental philosophy. The first five span the twin movements of phenomenology and existentialism, running from Husserl and Heidegger to Sartre, Merleau-Ponty, and Levinas. Subsequent essays deal with specific currents of continental thought in such areas as science, Marxism, linguistics, politics, aesthetics, feminism, and hermeneutics. A final chapter on postmodernism highlights the manner in which so many concerns of continental thought culminate in a radical anti-foundationalism. This volume provides a broad scholarly introduction to this period for students of philosophy and related disciplines, as well as some original interpretations of these authors. It includes a glossary of technical terms and a chronological table of philosophical, scientific, and other cultural events.

Handbook of Research on Science Education Sandra K. Abell, Norman G. Lederman, 2013-03-07 This state-of-the-art research Handbook provides a comprehensive, coherent, current synthesis of the empirical and theoretical research concerning teaching and learning in science and lays down a foundation upon which future research can be built. The contributors, all leading experts in their research areas, represent the international and gender diversity that exists in the science education research community. As a whole, the Handbook of Research on Science Education demonstrates that science education is alive and well and illustrates its vitality. It is an essential resource for the entire science education community, including veteran and emerging researchers, university faculty, graduate students, practitioners in the schools, and science education professionals outside of universities. The National Association for Research in Science Teaching (NARST) endorses the Handbook of Research on Science Education as

an important and valuable synthesis of the current knowledge in the field of science education by leading individuals in the field For more information on NARST please visit <http://www.narst.org>

Routledge Revivals: Art and Artifact in Laboratory Science (1985) Michael Lynch, 2017-09-20 First published in 1985 this book provides a descriptive study of social activities in a neurosciences laboratory Based on fieldwork conducted by the author in the laboratory during 1975 and 1976 and taking an ethnomethodological approach it focuses on the phenomenon of the social accomplishment of natural scientific order Through the examination of shop work and shop talk in this environment it identifies an analyzable social basis in the local production of accounts of natural objects in laboratory research This work will be of interest to students and scholars of ethnomethodology and sociology

Science in the Age of Baroque Ofer Gal, Raz Chen-Morris, 2012-11-28 This volume examines the New Science of the 17th century in the context of Baroque culture analysing its emergence as an integral part of the high culture of the period The collected essays explore themes common to the new practices of knowledge production and the rapidly changing culture surrounding them as well as the obsessions anxieties and aspirations they share such as the foundations of order the power and peril of mediation and the conflation of the natural and the artificial The essays also take on the historiographical issues involved the characterization of culture in general and culture of knowledge in particular the use of generalizations like Baroque and the status of such categories and the role of these in untangling the historical complexities of the tumultuous 17th century The canonical protagonists of the Scientific Revolution are considered and so are some obscure and suppressed figures Galileo side by side with Scheiner Torricelli together with Kircher Newton as well as Scilla The coupling of Baroque and Science defies both the still triumphalist historiographies of the Scientific Revolution and the slight embarrassment that the Baroque represents for most cultural national histories of Western Europe It signals a methodological interest in tensions and dilemmas rather than self affirming narratives of success and failure and provides an opportunity for reflective critique of our historical categories which is valuable in its own right

Science as Practice and Culture Andrew Pickering, 1992-05 Science as Practice and Culture explores one of the newest and most controversial developments within the rapidly changing field of science studies the move toward studying scientific practice the work of doing science and the associated move toward studying scientific culture understood as the field of resources that practice operates in and on Andrew Pickering has invited leading historians philosophers sociologists and anthropologists of science to prepare original essays for this volume The essays range over the physical and biological sciences and mathematics and are divided into two parts In part I the contributors map out a coherent set of perspectives on scientific practice and culture and relate their analyses to central topics in the philosophy of science such as realism relativism and incommensurability The essays in part II seek to delineate the study of science as practice in arguments across its borders with the sociology of scientific knowledge social epistemology and reflexive ethnography

Ethnographies Revisited Antony J. Puddephatt, William Shaffir, Steven W. Kleinknecht, 2009-12-16 This book presents reflexive first hand accounts from the

authors of major book length ethnographies recounting how they generated their key ideas in the practice of field research This volume provides a fresh approach to teaching qualitative research by encouraging students to think creatively and theoretically in the field *The Word and the World* Michael Mulkey, 2024-02-09 First published in 1985 The Word and the World is a significant empirically based contribution to the sociological analysis of scientists discourse and scientific culture It also offers a radical departure from established forms of sociological discourse which has far reaching implications for all areas of sociological study The central aim of this book is to widen the range of textual forms used in empirical sociological research and thereby to increase sociologists ability to furnish interesting valid and practically useful conclusions The unusual textual forms employed for the purposes of sociological analysis are the play the investigative inquiry the participant analyst dialogue and the parody One of the main substantive topics that provides the material for these explorations in form is the scientific debate This book will be of interest to students of sociology rhetoric linguistics and science **Thomas Kuhn** Thomas Nickles, 2003 Publisher Description **Constructivism in Science Education** Michael Matthews, 2012-12-06 Constructivism is one of the most influential theories in contemporary education and learning theory It has had great influence in science education The papers in this collection represent arguably the most sustained examination of the theoretical and philosophical foundations of constructivism yet published Topics covered include orthodox epistemology and the philosophical traditions of constructivism the relationship of epistemology to learning theory the connection between philosophy and pedagogy in constructivist practice the difference between radical and social constructivism and an appraisal of their epistemology the strengths and weaknesses of the Strong Programme in the sociology of science and implications for science education The book contains an extensive bibliography Contributors include philosophers of science philosophers of education science educators and cognitive scientists The book is noteworthy for bringing this diverse range of disciplines together in the examination of a central educational topic After Heresy Vitor Westhelle, 2010-03-01 which post colonial religious hybridity is made possible Departments of Labor, Health and Human Services, Education, and Related Agencies Appropriations for 2011: Statements of members of Congress and other interested individuals and organizations United States. Congress. House. Committee on Appropriations. Subcommittee on the Departments of Labor, Health and Human Services, Education, and Related Agencies, 2010 **Theoretical Issues in Psychology** Sacha Bem, Huib Looren de Jong, 2006 This thoroughly revised edition of the classic textbook explores a wide range of problems in psychology philosophy cognitive and brains sciences identifying the major topics debates and controversies and presenting them in a balanced and accessible manner for students Rethinking Expertise Harry Collins, Robert Evans, 2008-09-15 What does it mean to be an expert In Rethinking Expertise Harry Collins and Robert Evans offer a radical new perspective on the role of expertise in the practice of science and the public evaluation of technology Collins and Evans present a Periodic Table of Expertises based on the idea of tacit knowledge knowledge that we have but

cannot explain. They then look at how some expertises are used to judge others how laypeople judge between experts and how credentials are used to evaluate them. Throughout Collins and Evans ask an important question: how can the public make use of science and technology before there is consensus in the scientific community? This book has wide implications for public policy and for those who seek to understand science and benefit from it. Starts to lay the groundwork for solving a critical problem: how to restore the force of technical scientific information in public controversies without importing disguised political agendas. Nature A rich and detailed periodic table of expertise full of case studies, anecdotes and intriguing experiments. Times Higher Education Supplement UK *Doing Science (RLE Edu O)* Robin Millar, 2012-05-31. Doing Science is unique in seeking to make explicit the links between science education and science studies. These fields of study and their respective academic communities, whilst appearing to have many potential points of contact, remain surprisingly separate with little apparent recognition of the relevance to the interests of each of the work done within the other tradition. Presenting detailed accounts of current research, the book highlights the significance of modern science studies for classroom practice and conversely the importance of the classroom and teaching laboratory as a context for science studies. The thread which runs through the collection as a whole is children's experience of doing science and the image of science which learners pick up along with the science knowledge, understanding and skills they require.
