

# SOMATIC SYMPTOM DISORDERS

Somatic symptom disorders are characterized by physical symptoms suggesting medical disease but without demonstrable organic pathology or known pathophysiological mechanism to account for them.

The term psychosomatic began to be used to convey the connection between the mind (psyche) and the body (soma) in states of health and illness.

Hysteria refers to multiple physical complaints with no organic basis; the complaints are usually described dramatically.

## SOMATIZATION

Somatization is defined as the transference of mental experiences and states into bodily symptoms.

## 3 CENTRAL FEATURES OF SOMATIC SYMPTOM ILLNESSES

- Physical complaints suggest major medical illness but have no demonstrable organic basis.
- Psychological factors and conflicts seem important in initiating, exacerbating, and maintaining the symptoms.
- Symptoms or magnified health concerns are not under the client's conscious control.

Somatic symptom and related disorders are classified as mental disorders, by the DSM-5, when the excessive focus on somatic symptoms is beyond any medical explanation and it causes significant distress and impairment in one's functioning.
