Subject Guide to Books in Print ,1991   Some Limit Theorems in Statistics R. R. Bahadur,1971-01-01 A discussion of some topics in the theory of large deviations such as moment generating functions and Chernoff s theorem and of aspects of estimation and testing in large samples such as exact slopes of test statistics   Some Limit Theorems in Statistics Raghu Raj Bahadur (Statistician),1971   *Limit Theorems For Associated Random Fields And Related Systems* Alexander Bulinski,Alexey Shashkin,2007-09-05 This volume is devoted to the study of asymptotic properties of wide classes of stochastic systems arising in mathematical statistics percolation theory statistical physics and reliability theory Attention is paid not only to positive and negative associations introduced in the pioneering papers by Harris Lehmann Esary Proschan Walkup Fortuin Kasteleyn and Ginibre but also to new and more general dependence conditions Naturally this scope comprises families of independent real valued random variables A variety of important results and examples of Markov processes random measures stable distributions Ising ferromagnets interacting particle systems stochastic differential equations random graphs and other models are provided For such random systems it is worthwhile to establish principal limit theorems of the modern probability theory central limit theorem for random fields weak and strong invariance principles functional law of the iterated logarithm etc and discuss their applications There are 434 items in the bibliography The book is self contained provides detailed proofs for reader s convenience some auxiliary results are included in the Appendix e g the classical Hoeffding lemma basic electric current theory etc   *Some Limit Theorems in Statiatics* R. R. Bahadur,1971   **Limit Theorems in Probability and Statistics** I. Berkes,Endre Csáki,Pál Révész,1990   **Limit Theorems in Probability and Statistics** Pál Révész,1984   **Uniform Central Limit Theorems** R. M. Dudley,2014-02-24 In this new edition of a classic work on empirical processes the author an acknowledged expert gives a thorough treatment of the subject with the addition of several proved theorems not included in the first edition including the Bretagnolle Massart theorem giving constants in the Komlos Major Tusnady rate of convergence for the classical empirical process Massart s form of the Dvoretzky Kiefer Wolfowitz inequality with precise constant Talagrand s generic chaining approach to boundedness of Gaussian processes a characterization of uniform Glivenko Cantelli classes of functions Gin and Zinn s characterization of uniform Donsker classes and the Bousquet Koltchinskii Panchenko theorem that the convex hull of a uniform Donsker class is uniform Donsker The book will be an essential reference for mathematicians working in infinite dimensional central limit theorems mathematical statisticians and computer scientists working in computer learning theory Problems are included at the end of each chapter so the book can also be used as an advanced text   *Limit Theorems of Probability Theory* Yu.V. Prokhorov,V. Statulevicius,2013-03-14 This book consists of five parts written by different authors devoted to various problems dealing with probability limit theorems The first part Classical Type Limit Theorems for Sums ofIndependent Random Variables V v Petrov presents a number of classical limit theorems for sums of independent random

variables as well as newer related results The presentation dwells on three basic topics the central limit theorem laws of large numbers and the law of the iterated logarithm for sequences of real valued random variables The second part The Accuracy of Gaussian Approximation in Banach Spaces V Bentkus F G6tze V Paulauskas and A Rackauskas reviews various results and methods used to estimate the convergence rate in the central limit theorem and to construct asymptotic expansions in infinite dimensional spaces The authors con fine themselves to independent and identically distributed random variables They do not strive to be exhaustive or to obtain the most general results their aim is merely to point out the differences from the finite dimensional case and to explain certain new phenomena related to the more complex structure of Banach spaces Also reflected here is the growing tendency in recent years to apply results obtained for Banach spaces to asymptotic problems of statistics   *SOME LIMIT THEOREMS IN STATISTICS- BASED ON LECTURES GIVEN AT A CONFERENCE ON LIMIT THEOREMS IN STATISTICS- CONFERENCE BOARD OF THE MATHEMATICAL SCIENCES.* ,

Limit Theorems of Probability Theory Pál Révész,1975 Limit laws for order statistics Some notes on the law of the iterated logarithm for empirical distribution function Some notes on the empirical distribution function and the quantile process Law of large numbers for Markov chains homogeneous in time and in the second component Learning from an ergodic training sequence Around the Glivenko Cantelli theorem Gauss distributions and central limit theorem for locally compact groups Limit problems on topological stochastic groups and bohr compactification Weak convergence and embedding The method of perturbation on the spectrum of linear operators in asymptotic problems of probability theory Equivalence orthogonality dichotomies of probability measures On some asymptotical properties of recursive estimates On the properties of the recursive estimates for a functional of an unknown distribution function Some functional laws of the iterated logarithm for dependent random variables   *Limit Theorems for Sums of Exchangeable Random Variables (Rowman & Allanheld Probability and Statistics Series)* Robert Lee Taylor,Peter Zito Daffer,Ronald F. Patterson,1986 To find more information about Rowman and Littlefield titles please visit www rowmanlittlefield com
